Chemical Week

November 17, 1951 Price 35 cents

IN TWO PARTS • PART ONE

Three unions vie for chemical workers; results: "raiding," and no solid front—yet ..... p. 13

Industry will soon "mine" atomic dump heaps, cash in on low-cost radiation ..... p. 29

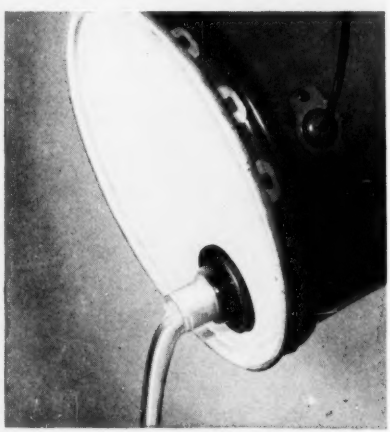
Don't underestimate plastics equipment; it's coming up fast, doing many jobs ..... p. 37

New chemicals, new formulations will sharpen weed-killer competition; targets: cotton, legumes p. 45

It's legally OK to boost many prices; but ample stocks, fight for sales, curb hikes ..... p. 59

A McGRAW-HILL PUBLICATION

"Hole in the dike!"



Legend praises the courage of the little Dutch boy who plugged a leak in the dike with his arm until help arrived.

Every closure in dispensing containers is a potential hole in the dike . . . a hole that demands a perfect plug to stop leakage from evaporation, corrosion, mishandling.

That's why FlexSpout®, a new leakproof and tamperproof sealing spout for containers, is already being used by the hundreds of thousands. FlexSpout is a joint development of Shell and the facilities of Rieke Metal Products Corporation.

FlexSpout, made of polyethylene resin, combines all three desirable features of the ideal chemical closure . . . a flexible "pull-out" spout; a strong, leakproof, tamperproof closure; and a remarkable resistance to chemical attack. FlexSpout is now a feature of Shell Chemical 1- and 5-gallon containers, and its use has spread throughout the packaging industry.

The FlexSpout closure is another example of Shell's search for better Service . . . for the users of industrial chemicals.

FASTER FILTRATION—
CLEANER FILTRATE
WITH EIMCO PRECOAT FILTERS

Eimco Precoat Filters are being used with outstanding success in many industries when solutions carry fine particles in suspension or where the solids are of a sticky or gummy nature.

All colloidal matter is removed from the solution and the precoat media is shaved clean each revolution. These Eimco filters are especially suited for the petroleum, food, chemical, antibiotics and allied fields.

Eimco Precoat Filters are available in a wide range of sizes and in many materials of construction depending on the nature of the material to be filtered.

Open type, vapor tight and pressure tight models are all available. Write for specifications and details on Eimco Precoat Filters.

It's fast and accurate . . .

Shoots 15 feet — a drop or a squirt. It's labeled Kroil — so you can grab it quickly when a frozen bolt, screw or bearing starts to cost expensive time or threaten production.

That is when KROIL creeps into millionth inch spaces to soften rust, dissolve gum and supply lubrication to loosen the parts. It's fast and it's positive.

"Kano Kroil always opens up the tight fitting covers on fire extinguishers for us. It is truly a wonderful preparation. We have found such covers we could not force off with a blow of a hammer. Several minutes' seepage of Kroil did the trick," so says a service organization for fire extinguishers.

Kroilers are priced at $1.50 each and are well worth it. As an inducement to try Kroil we offer the combination of one Kroiler and one gallon of Kroil—(listed at $3.50) for $4.75, f.o.b. factory.

If you are not one of the 9,500 industrial plants already using Kroil, send for a gallon on the proposition that it will loosen the most stubborn frozen part or you get your money back.

OPINION . . . . .

The Coming Squeeze

It takes nothing more than a casual glance at third quarter earnings to see that chemical companies are being pretty badly buffeted by the tax collector. The tax bite is big—and it's apparent. Thus it's easy to jump to a simple conclusion: the "new taxes" are responsible for the sharp dip in corporate earnings.

It's true enough that taxes are a big factor. But there's another, less obvious but just as serious profit curb. And that's the pressure rising costs are putting on the industry.

Actually, the squeeze has just begun. Within the next few months, however, it will worsen; by next summer it will be of major proportions. This, in our opinion, is what you can expect, should anticipate now:

We shall have to get set to meet another surge of inflation—and a kind that the chemical industry is going to find far from comfortable. It won't be the old "too-much-money-chasing-not-enough-goods" brand of inflation; rather, it'll be the "cost-push" variety —wages and other industrial costs going up well *before* prices rise.

In spite of all the howls about inflation, almost anyone will admit—if he's forced to—that post-Korea inflation was not too rough on business. In most cases businessmen managed to get prices up before costs soared. Or, as was the case with wage increases during the period, prices at least moved up at about the same time costs rose. Too, in general, business volume boomed.

The prospects now are different, very different. The cost of doing business is going to push on upward—wages, raw materials, transportation—and at a time when legal controls will largely forestall price rises.

The first big push will probably come within the next couple of months when the steel companies settle wage negotiations with Philip Murray's United Steel Workers. The odds are that industry will have to follow the wage pattern set down by steel. That, at least, is in line with the post-war record.

This then is the prospect: rising wages, rising taxes, a steady but moderate increase in raw material and transportation costs. And all this at a time when it will be difficult, if not impossible, to hike chemical prices.

That doesn't make for a particularly cheerful outlook. Nonetheless, it isn't exactly cheerless. Chemical production is booming, corporate profits are healthy.

But this is evident: It is essential to recognize now that the squeeze is coming. And that makers of heavy, basic chemicals plan ahead for pared profit margins and (1) consider upgrading product lines; (2) appraise production practices to take advantage of the newest, most economical techniques and equipment; and (3) invest in research to develop new, longer-profit items.

Any chemical concern blithely overlooking those roads to profit faces a cheerless future.

—**W. Alec Jordan,** *Editor.*

POURING WAX: It's upside down.

Smooth Pouring

To The Editor: In your article "Waxing with Shellac" (Chemical Week, October 27, 1951, page 35) you illustrate a pretty young lady pouring wax from a can. As you can clearly see, the wax is slopping all over the can and floor. (See cut)

So many people are unaware of the proper way to pour from a full can that we recently illustrated this in a copy of our company magazine "Bright News." We are sending you a copy of this magazine with the thought that you might wish to pass on to your readers this simple example of how smooth pouring can be accomplished.

Charles Butcher, 2nd
The Butcher Polish Co.
Boston, Mass.

Reader Butcher (whose company, incidentally, pioneered floor wax manufacture in the U.S.) gives his dealers these instruction: "To pour wax from

HEADQUARTERS FOR CHROMIUM CHEMICALS

Increased production, pioneering research and intelligent technical service make the Mutual Chemical Company of America "Headquarters for Chromium Chemicals." Whether you are an old or new user of Chromium Chemicals, it will pay you to come to "Headquarters."

With the largest Chromium Chemical plant in the world located at Baltimore and a second plant in Jersey City, Mutual this year will set an all-time production record. So for Chromium Chemicals remember the name Mutual . . . first in production, research and service.

Tall Tale

DOW CORNING SILICONE NEWS
NEW FRONTIER EDITION
THIRD OF A SERIES

Winterizing recalls the time Davy Crockett climbed Daybreak Hill. Found the earth froze fast on her axis; sun congealed in his own sweat. So Davy took a ton of bear oil; worked it in his hands 'till it melted over sun's face and earth's axis. Then he give earth's cogwheel a backward kick to loosen the sun. Earth grunted and started to turn. Dawn broke late but mighty beautiful that January morning.

to Fabulous Fact

We've speeded things up some since Crockett's time; shoved the North Pole closer to the equator; made adequate lubrication increasingly difficult and essential. Unhappily, like bear oil, even the best organic lubricants are still tied to the weather's apron strings; none is useful at both high and low temperatures; none is serviceable for long at 250°-500°F.

That's why Dow Corning Silicone oils and greases are among the Fabulous Facts of our times. They're practically unchanged by tropic heat or arctic cold. They make oven conveyor systems operable without continuous maintenance; offer a potential saving of $45,000,000 a year in the bearings of industrial motors alone; make permanent lubrication a practical reality.

Vice President,
Chas. Pfizer & Co. Inc.,
Brooklyn, N. Y.

Name of Fairness

TO THE EDITOR: Just read your splendid company editorial (Oct. 6) "Not in the Name of Fairness."

Often we know that something is important, but are not aware of it. Often we have the right picture, but it is dim. It is then we really appreciate it if somebody calls it to our attention and brings the picture into focus.

I wish that you would find a way to print this editorial on large posters for public display, or for posting on bulletin boards. . . .

I feel sure that civic organizations, chambers of commerce, banks, etc. would be just as interested in them as your industrial audience. . . .

WILLIAM H. SACHS,
Consultant,
Atlanta, Ga.

Add Netherlands

TO THE EDITOR: We have read your article "Gypsum, not Sulfur" in the Oct. 13 issue with very much interest. As a matter of fact the Netherlands authorities are also investigating the possibilities for making ammonium sulphate from anhydrite.

OPINION . . . . . .

You will no doubt be interested to hear that in 1910 . . . the Semarang Gas Works (Indonesia, formerly Dutch East Indies) produced ammonium sulphate from gypsum and ammonia with a capacity of 20 tons per year.

Until 1922 a total production was stopped because of lack of gypsum.

P. SCHOENMAKER
Netherlands Institute for Industrial Development
The Hague
Netherlands

Thanks, Reader Shoenmaker. To the roster of countries using the process commercially (Germany, England) and and those mighty interested in it (India, U.S.) we'll add the Netherlands. —ED.

Airless Blasting

TO THE EDITOR: I noticed your item on page 34 of the Nov. 3rd "Chemical Week" which had to do with the airless blast cleaning of centrifuge baskets . . . [at an Eastman Kodak plant].

I was both surprised and disappointed to see that our company name had not been mentioned at all in the article . . . as a manufacturer of the cleaning machine and that the name of the cleaning machine, itself, was omitted.

I should think that, to be of the greatest service to your readers, you would want to mention a source of supply for these machines so that those chemical processers who have similar cleaning problems would know where to go in order to find a solution. . . .

E. F. ANDERSON
American Wheelabrator & Equipment Corp.
Mishawaka, Indiana

Inadvertently omitted, the name of the name of the machine is: Wheelabrator airless unit and Swing Table. How it works: An airless abrasive cleaner hurls metallic particles from a spinning wheel. Lacquer used to be burned off the baskets, but the new technique is cleaner, simpler.—ED.

CW welcomes expressions of opinion from readers. The only requirements: that they be pertinent, as brief as possible.

NEWSLETTER

The defense program is now beginning to squeeze fertilizer and insecticide production. The fertilizer outlook, in particular, is so dim that it rates near the top of Secretary of Agriculture Brannan's roster of worries.

It isn't that fertilizer output has been cut back. On the contrary, supplies for the July 1951-June 1952 year will be greater than the one just past—but they won't be big enough.

Brannan is in a politically potent position—so it wouldn't surprise Washington observers if he wielded his influence to provide more production capacity, more raw materials for agricultural chemicals.

Farmers are learning to love chemicals—they're using 5 million tons of fertilizer this year against 1.8 million tons a decade ago—and a fiscal phenomenon in North Carolina is further proof.

There the farmers voted to tax themselves 5¢ per ton of feedstuffs and fertilizers to support agricultural research at the state college. The tax is called "Nickels for Know-How," is expected to yield about $125,000 a year.

On the other side of the fence—agricultural markets are lush enough to provide incentive for process development.

Naugatuck Chemicals, Division of Dominion Rubber Co. (Montreal), has a new, continuous DDT process that boosts productivity thirtyfold, based on output per volume of reactor.

Yields, too, are high, and the processing cost is thus cheaper. Based on chloral, the yield is 97%-98%; based on chlorobenzene, it's 80%.

You can count on hearing more about the process, which utilizes fluosulfonic rather than sulfuric acid as the dehydrating agent.

Meanwhile, the Federal government will spend $2 million to stamp out halogeton, a poisonous weed that's killing Western livestock.

Chemical sprays, followed by reseeding, will be the principal control measure.

Can you make propionic acid cheaply? Minnesota Mining & Manufacturing Co. has shelved a new process because it can't find ½-1 million pounds a month at a price approaching that of acetic.

What the process may be is a closely guarded secret, but it would come off the shelf in a hurry if the propionic could be found.

Underground gasification of coal is another process that may come off the shelf; a just-completed test has power experts intrigued.

In this second test—staged by the Bureau of Mines and Alabama Power Co.—65% of the heating value of the coal consumed in one area was realized over a four-month period. More important, more energy was obtained than could have been procured by mining the coal.

This is the time of year when Government economists start making predictions on the state of business during the coming twelve months.

Initial pronouncements are timid, tentative. But the tenor of them is that run-away inflation has just about run is course; prices will rise—but not much; shortages won't worsen.

They're vague, but they seem to agree—even though the administration officially doesn't see it that way—that the evil spirit of fast inflation has been pretty well exorcised.

One shortage that will get worse before it gets better: sulfur.

NPA has finally issued a sulfur order that limits consumers' stocks to a 25-day supply, doesn't provide as yet for a 10% cut in use of sulfuric acid and carbon bisulfide for less essential products, as was originally proposed (CW, Oct. 27); but it will take effect later.

It looks as if NPA is tiptoeing, afraid to upset sulfur users. Among the producers, on the other hand, Freeport Sulphur Co. wants the Government to take more responsibility for who gets how much.

Better tabs on chemical production will help dispel uncertainty, will make industry's and Government's jobs easier.

Commerce Department's Bureau of the Census has added 23 chemicals to the list of inorganics it regularly reports on. Among them: acetylene, caustic potash, aluminum chloride, silica gel, sulfur dioxide, chromic acid. First report on the additions is for August.

Smaller companies, in particular, have got the short end of the CMP stick. Some of them will be forced to operate at 50% or less of their base-period production because of copper and aluminum cutbacks.

Now DPA and the Munitions Board are setting up "Industry Assistance Clinics," will try to get more Government work for the victims.

Names of the firms and details of their facilities will be made available to procurement agencies.

Who will operate Morgantown? The Army negotiated a lease with Mathieson Chemical Corp. for operation of the large West Virginia ammonia plant, but Allied Chemical and United Distillers, both of whom submitted better bids, are fighting it.

The Congressman from that district, H. O. Staggers (Dem.), is now calling for a Department of Justice investigation. The House Armed Services Committee has not yet passed on the lease; and Staggers asks for an early decision to benefit his constituency's workers.

Massachusetts firms know it already, but the state's Development and Industrial Commission paid a consultant over $11,000 to prove that the Democratic state administration hobbles industry, coddles labor.

The State Labor Commissioner tried to suppress the report, which contends that the state's tax and other industrial policies were driving industry away from the state.

Dow Chemical may make magnesium from underground brines in West Texas. A test drilling is planned in Borden County, near Gail.

Export of Alberta natural gas is still held up by the Provincial board. Route hearings have been put off until April, Pending a decision.

Corrosive fumes...

Salt air...

Hot air...

Moist air...

SO WHAT!

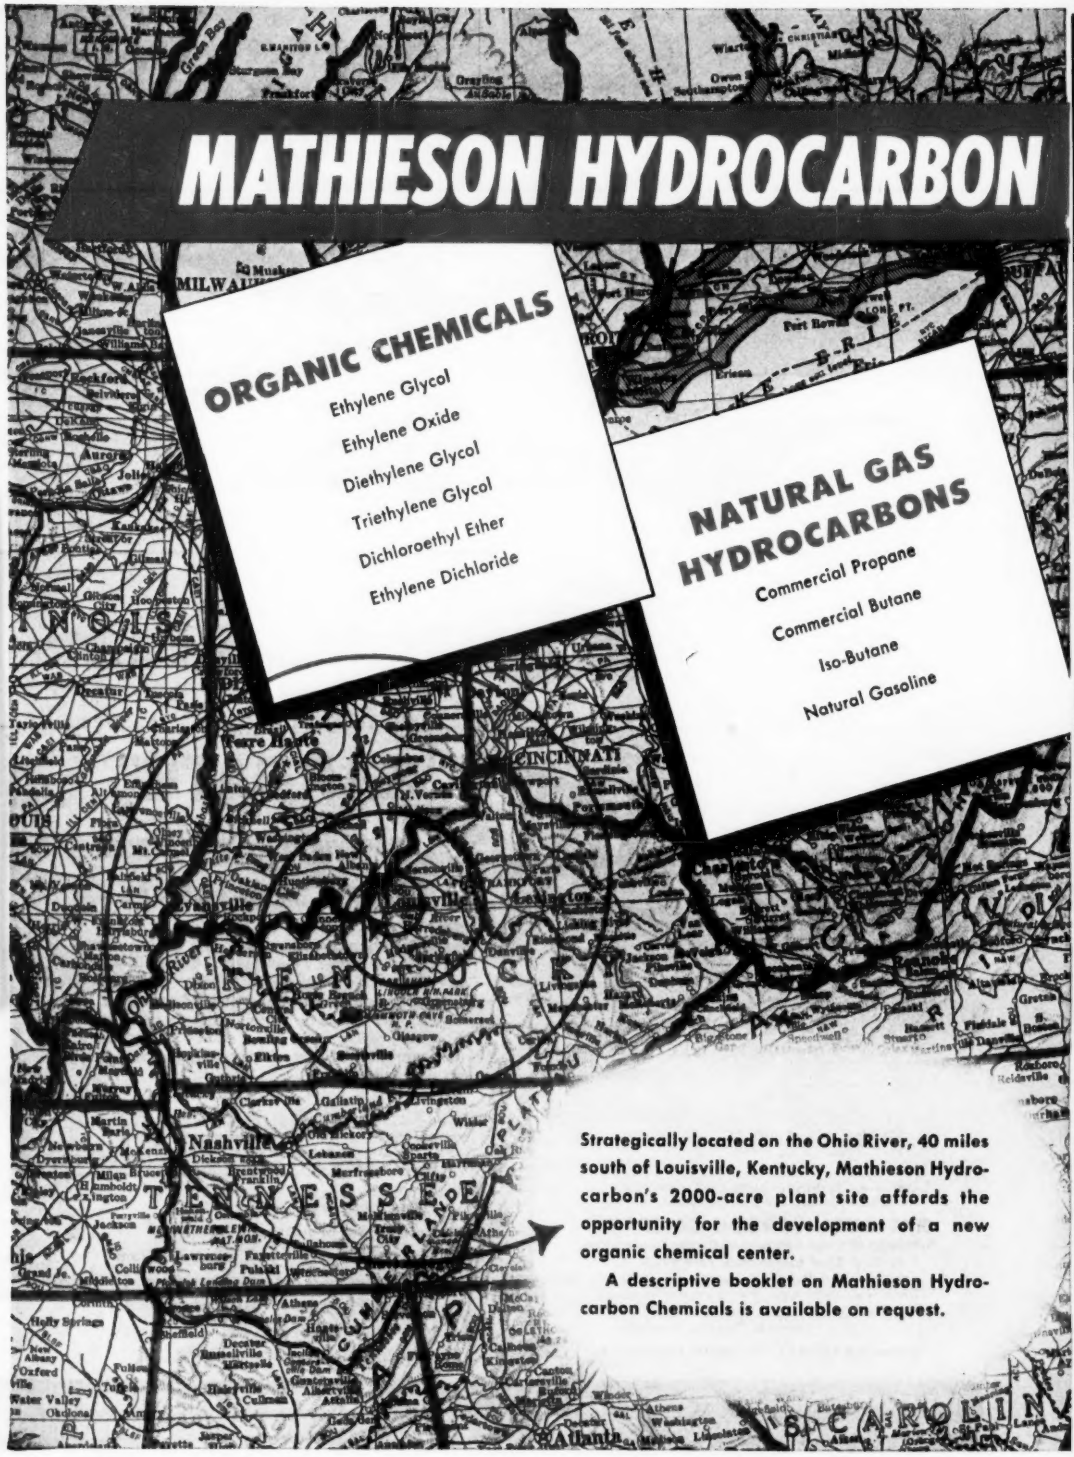
"KARBATE" BRAND

impervious graphite pipe takes it all in stride!

Have you thought about corrosion *on the outside* of your plant piping? Fumes, salt air, hot air, moist air, can eat up *the exterior* of piping, fittings, valves, pumps, and other equipment around a chemical plant. And it costs money to protect ordinary metal surfaces. You have to sandblast, use special coatings, and even then you find the corrosion creeping in and chewing up the equipment...

NOT SO WITH "KARBATE" IMPERVIOUS GRAPHITE!

Here are the advantages:



- **No exterior protection needed**
- **Both acid-resistant and alkali-resistant**
- **Light in weight, easy to machine and assemble**
- **No metallic contamination of product**
- **Immune to thermal shock**
- **Very high thermal conductivity**

The term "Karbate" is a registered trade-mark of Union Carbide and Carbon Corporation

More will try...
to imitate

DREW COCONUT FATTY ACIDS

To imitate is to compliment. And we *are* complimented by producers who try to imitate the composition, color, stability and freedom from odor of Drew Coconut Fatty Acids.

Invariably, two ingredients—lack of experience and specialized knowledge—doom such attempts to failure. It is Drew's possession of these, together with modern research and production techniques, that give you a product *plus* that is an essential part of every Drew Coconut Fatty Acid.

When you think of coconut fatty acids, remember these simple facts:

- Drew's coconut fatty acids are distilled and fractionated to improve odor, provide long-lasting color stability, and give greater soap value.
- Drew is one of the world's largest producers of coconut fatty acids.
- Wherever specifications call for quality coconut fatty acids, note how often you see the phrase: "E. F. Drew or equal."

If *quality* has made your product famous . . . if you want to establish *quality* in your product . . . don't be satisfied with imitations. Always specify Drew fatty acids.

Write for reference booklet, "Drew Fatty Acids"

BUSINESS & INDUSTRY . . . . .

ORGANIZED WORKERS: The trend is up.

Progress and Paradox

Growth in chemical labor unions has been rapid, extensive; but labor still has an inferiority complex.

Embittered by past experiences, labor still attacks business as it was in the "robber baron" days.

Labor-management relations are improving, but are hampered by mutual immaturity.

Last week, while the CIO was holding its 13th annual convention in New York City, the accomplishments to date of the labor movement were getting a thorough going-over.

For labor in general, and for chemical unions in particular, it was a time to stop and take stock of what has been done, and what is still ahead.

In many ways, it was a paradoxical situation.

Like the movies, labor unions are better (and bigger) than ever. Yet much of their thinking and talking is based on the contention that they are still a small, unprotected minority.

Like staid Bostonian John Dickinson, labor believes that "by uniting we stand, by dividing we fall." Yet the different chemical unions have been unable to achieve unity among themselves.

Like Phil Murray, chemical unions believe that "nothing must stop the work of organizing the unorganized in America." Yet much of the funds of the union is dissipated in the expensive practice of "raiding" other unions, rather than recruiting those who have not been unionized.

But despite these anomalies, labor unions have come a long way from the violent dawn of trade unionism. Management, too, has come a long way from its early, stiff-necked attitude. It now recognizes its workers' right to organize, and sits down with the various unions for bargaining sessions.

In the chemical industry, enlightened union and management representatives are getting to know more about each other, are beginning to realize their vital interdependence.* But despite their progress, several fundamental differences will continue to disturb the peace:

• Seniority. Union contracts set seniority as a basis for promotion. If two men are equally qualified for a job, the one who has been employed by the company longer gets the post. The other man, while he may be potentially worth 10 times as much to the company, loses out. Unless he receives some recognition for his work, he may lose interest in his job, hurting the company (and, in the end, the union).

• Union Rules. Contract clauses which set standards for all workers—standard production level, standard job rate—have different interpretations by management and labor. To labor they are good, since they protect the group from the "speed-up" bogey. To management they are seen as group defenses against the individual's weakness. For the good of the company, such weaknesses are better eliminated.

• Technology. This common failing of unions in general is not quite as typical of chemical operating groups. Chemical workers are usually better educated than "ordinary" labor. Also, there is a realization that the chemical industry is one where technological progress is inevitable. Where the number of men needed for a specific operation may decline, over-all employment totals are increasing.

(In such groups as construction workers, however, featherbedding and make-work practices are notorious. The depression-based philosophies here are among the worst of all unions.)

The Over-All Picture

In considering the union picture in the chemical industry, one might report on unions in the oil, paint, glass, paper, textile, distillery, rubber and a multiplicity of other industries. A clear—but less complicated—picture can be obtained by covering just the "chemical" unions.

The big three in the field: the AFL International Chemical Workers, the CIO United Gas, Coke and Chemical Workers, and District 50 of the United Mine Workers.

Union Development: Like organic chemistry, which developed on a practical scale from coal by-products,

* They haven't, however, attained the felicity of union-management relations in, for example, the garment industry. Here, the ILGWU voluntarily took a pay cut because of poor industry-wide business conditions.

AFL's BRADLEY: Much of the character of the AFL International Chemical Workers is exemplified in the union's graying, pugnacious president, H. A. Bradley. While he is 78 (eldest of the chemical Big Three), his energy is that of a younger man.

As a union leader who remembers the difficult, early years of unionism, Bradley says he can "never be unprejudiced" in his relations with management.

His homespun earnestness, however, has won him respect at the bargaining table. A pet subject is human relations—especially the need for joint union-management sponsorship of a program to educate workers to the ideals of capitalism and democracy.

CIO's WAGNER: The CIO Gas, Coke and Chemical Workers' Martin Wagner might, at first glance, be taken for a school teacher. He is small in stature, but big in his intense dedication to unionism. He began life as a miner, later switching to coal chemicals production. He was a member of the union established at a St. Louis gas company—one of the original locals in UMW's District 50.

A prime mover for union consolidation, he advocates coalescing into one group workers in the chemical, rubber, paper, glass and oil industries. "Hitler, despite any other action," he says, "did a good thing when he forced German unions to consolidate. In this respect they are ahead of us."

DISTRICT 50's LEWIS: When the name Lewis is mentioned in the same breath with the United Mine Workers, one thinks first of John L. As yet, A. D. (Dennie) Lewis, titular head of District 50, is definitely outshone by his more famous brother. While John is president of UMW's District 1, Dennie is chairman of the organizing committee of District 50.*

Dennie, who has the family trait of bushy eyebrows, is an intense, gruff man. Anyone who talks with him probably notices most his restlessness. Except in moments of deep concentration, he is continually fidgeting with a pencil, tipping to and fro in his chair, or finding some similar physical outlet for his energy.

---

chemical unions had their start in the coal industry.

The United Mine Workers, which began organizing in 1890 in the mines themselves, slowly grew in scope to include coke, tar and gas works.

By 1933 these locals became so numerous that the UMW set up its District 50 as a separate division. Little by little this group widened its jurisdiction until most of the industrial chemical field was included. The UMW (including District 50) was one of the groups which founded the CIO, following a disagreement within the AFL over craft *vs.* industrial unionism.

In 1939, Martin Wagner became the district's top official, but two years later was appointed to the district's executive committee. (Wagner asserts he was "kicked upstairs" because he would not be dominated by UMW's president, John L. Lewis.) The present leader of the district is A. D. Lewis, brother of John L.

In 1942, following a political disagreement, Lewis pulled the UMW out of the CIO. It was at this point that the CIO United Gas, Coke and Chemical Workers came into being, under the leadership of Wagner. Locals of District 50 which decided to stay in the CIO served as a nucleus of the organization. Since the UMW—CIO breakup, membership of District 50 has become more heterogeneous, and at present, only about half of its membership is in the chemical process industries.

Meanwhile, spurred by intense inter-union competition in organizing different industries, the AFL Chemical Workers was founded. H. A. Bradley has served this union as president since its start in 1940.

Consolidation Attempts: In 1946, there reportedly was a movement toward the linkage of the AFL and CIO unions. According to CIO's Wagner, he was approached by Merle Preston, an assistant to Bradley, on the question, and later he (Wagner) went to see AFL officials. The question of consolidation, Wagner asserts, was stymied by an inability to agree with which in-laws the newlyweds would abide. Bradley, on the other hand, denies the whole thing.

One basic stumbling block to any merger is the question of jurisdiction. It was over this matter that the original CIO-AFL split occurred. Many of the unions organized vertically throughout an industry had clashed with craft unions, which stuck to a horizontal organization. CIO, after its formation, was dedicated to the vertical-type union, while the AFL was still a mixture. Despite a greater chance for jurisdictional disputes in the AFL, Bradley says that in 11 years, a day has never been lost because of jurisdictional squabbles, and that no question over union sover-

* There is no president, as such, of District 50. While Lewis admits to being the district's executive officer, he will not agree that his title is synonymous with president.

eignty has come up within the last three years.

Questions of sovereignty have come up in the CIO because of the vague boundary between different chemical process unions. Last week at the CIO convention, 34 of the organization's 41 unions signed a three-step, legally enforceable agreement to settle such fights.

First step is conference between the unions involved; second, a meeting with Allan S. Haywood, CIO vice-president; and third, arbitration. While the arbitrator has not as yet been revealed, one guess is Frank Graham, who served as UN mediator in Kashmir.

Union "Raiding": Perhaps as a result of inter-union hassles, raiding by one union on another union's locals is prevalent. Union leaders decry the practice, but being "agin" raiding seems to be honored more in the breach. One exception: Leaders have given approval to raiding some independent unions which have a noticeable pinkish tinge.

Union Membership

In general, membership in chemical unions is limited to operating employes and to the lower echelon of supervisory workers. Dividing line is usually set below those supervisors who have the right to hire and fire.

In some cases, office workers are also organized, but professional workers almost never are. Where such groups exist, they are merely local.

Because the chemical industry overlaps so many others, and because there is no standardization in reporting membership, exact figures are not available on chemical unionization. Tying an estimated chemical union membership of 310,000 together with an estimated 450,000 workers in plants employing 100 or more, one concludes that 70% of the industry is unionized.

Individually, the three major unions report these figures for the workers they represent: AFL, 112,000; CIO, 80,000, and District 50, 200,000, of which about 100,000 are in the chemical field. There is considerable doubt as to whether these totals represent actual, dues-paying members.

Union Future

With the great expansion of the chemical industry, unions will have a golden opportunity to gain new members. The geographical distribution of union members will also change. The South, long relatively nonunionized, is being rapidly organized. It is still a fertile field.

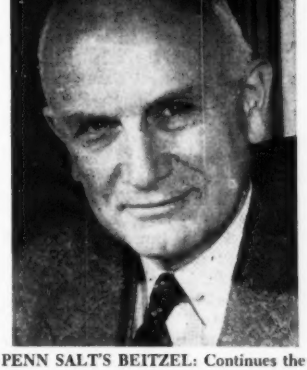
Along with growth, the boom in chemicals is bringing a change in bargaining patterns. During the soft years immediately following World War II, the emphasis was on security—pensions, hospitalization, insurance, guaranteed annual wages.

With better times in industry, money is the keynote. These are divided between across-the-board increase demands and hikes based on the Bureau of Labor Statistics' cost-of-living index.

The picture, from labor's standpoint, is a rosy one. But there still is a jarring note: While chemical unionism has grown up physically, it has a good way to go to catch up mentally. Management and labor now meet across the table on virtually equal terms. Yet labor still thinks of management as it was back in the robber-baron days.

In the latest issue of a union publication, for example, the government's quick amortization setup becomes a "tax kickback" program. Citing an example of a company which gets 70% certification on a $1 million factory, the publication makes this statement:

"So the company in five years gets a million dollar plant for $300,000, while you, Mr., Mrs., or Miss Taxpayer foot the bill for the other $700,000. . . . The phony reason for this tax kickback deal is . . . to 'encourage' the big companies to build plants now which may not be profitable to operate in peacetime. That is more Big Business hogwash, dear reader."



Demagoguery like this, without a basis in fact, highlights a central problem: the union idea—unfortunately born out of past violence—that it is forever necessary to undermine an employe's faith in his employer.

Unions have grown in all directions, but as yet haven't acknowledged that management, too, has progressed. Both, as parts of a single organic whole, must learn to live with each other and like it.

Organic – Inorganic Marriage

Pennsylvania Salt Manufacturing Co. is the latest to be added to that rapidly increasing list of heavy chemical companies that have gone the organic chemical route. Like Diamond Alkali, Penn Salt has chosen to build up this sector of the company's activities by acquiring an outside organic chemical producer, Sharples Chemicals, Inc. To effect the combine, Penn Salt has offered to exchange 88,497 shares of its common stock for the common stock of Sharples—3.15 shares of Penn Salt common for each share of Sharples common.

Penn Salt is a pioneer American chemical producer, celebrating its 100th anniversary last year. However, Sharples is a relative newcomer to the chemical field. Incorporated in 1926, the company first started operations at Belle, W. Va., moving to its present location at Wyandotte, Mich. in 1932. Founded on the Ayres patent for the chlorination of pentane, Sharples has since moved into such diverse fields as the manufacture of various amines, rubber chemicals and synthetic detergents.

PENN SALT'S BEITZEL: Continues the pattern.

Addition of this broad line of synthetic organic chemicals to Penn Salt's already extensive line of organic insecticides will provide the new combine with a well-rounded group of products. And they are not just products: They are products wherein the activities of the two companies nicely mesh.

The Sharples plant at Wyandotte is just across the road from a large Penn Salt caustic-chlorine-ammonia unit. And Sharples makes good use of these facilities, buying 18% of its raw materials ($740,000 in 1950) and paying $420,000 for process steam that is piped under the road separating the two plants. In addition all except two buildings at the Sharples plant site have been constructed on land leased from Penn Salt, which has retained the mineral rights as there undoubtedly are extensive salt deposits under the Sharples plant. Raw material purchases are not wholly one way, however; Penn Salt in 1950 paid $150,000 to Sharples for salt and hydrochloric acid, presumably derived from its many chlorination reactions.

$50 Million: Combination of the two companies would put Penn Salt sales in the $50 million-a-year bracket for the first time; combined net earnings should approach $4.75 million for 1951; nearly 1.1 million shares of Penn Salt common will be outstanding; there are $5 million in Penn Salt notes and $606,000 in a Sharples note which is held by The Mutual Life Insurance Co. of N. Y. In addition Penn Salt has agreed to loan Sharples $600,000 in November, 1951.

In today's rapidly changing market it is difficult to be precise about the dollar value of the proposed transaction. But Penn Salt common is now about 62. Thus the exchange would represent over $5 million.

The Continuing Pattern: Here again is seen the continuing pattern of heavy chemical producers going into the manufacture of organic chemicals from the heavy chemicals to upgrade the value and profit derived from their product. No longer can a caustic-chlorine manufacturer be dubbed by that name alone. His product line includes those items and a broad line of other products.

NLRB Says No

The CIO's Gas, Coke and Chemical Workers have lost a round in their running fight with the AFL's International Chemical Workers over who is to represent workers in Lever Bros. plants.

Gas, Coke and Chemical took the setback in its efforts to take its second Lever plant, at Cambridge, Mass., from International Chemical. The CIO union asked NLRB for an election at the Cambridge plant, but was turned down on the grounds that Lever's master contract with International Chemical prevents an election at this time.

Contract Binding: The board holds that the master contract is binding on all Lever Bros. plants where the contracting union holds bargaining rights at present, even though the Cambridge employees turned it down. Gas, Coke and Chemical will have to wait until the AFL contract expires next March, or until it is reopened for negotiation, to make its bid.

The CIO-AFL rivalry in Lever Bros. plants started about four years ago when Gas, Coke and Chemical won an election and took the Hammond, Ind., plant from International Chemical. Last year, when it tried to do the same at Cambridge, it lost the election. Feeling that it could win this year, the union asked for another election, but has now been turned down.

SYNTHETIC LIQUID FUEL PRODUCTION COSTS

	Coal Hydrogenation		Oil Shale	
	Single Plant	Multi Plant (8)	Single Plant	Multi Plant (5)
Coal or Shale: Tons/Calendar Day	12,960	112,590	76,800	384,000
Products: Barrels (42 Gals)/day				
Gasoline	19,490	163,830	25,380	126,900

• The report has assumed that these chemicals are processed to gasoline in the multi plant case.

Cheapest: Shale Oil

The National Petroleum Council's $300,000 study shows shale oil to be the cheapest non-petroleum liquid fuel.

Facilities for hydrogenation of coal to liquid fuel are far more costly to build and to operate.

Gasoline from comparable plants would cost 43½¢/gal via coal hydrogenation; 14.7¢/gal from oil shale.

A special committee of the National Petroleum Council (NPC) has just reported to Secretary of the Interior Oscar L. Chapman that, on the basis of plants with a total capacity of 216,000 barrels per day, the cost of synthetic gasoline from coal hydrogenation would be 43½¢ per gallon; from oil shale, 14.7¢. (The present wholesale price of gasoline at the refinery varies from 12¢ to 13¢ per gallon.)

Moreover, the eight hydrogenation plants required for this production rate would represent a capital investment of over $4 billion; the needed five oil shale plants would cost $1.5 billion.

The present study is the outgrowth of a request made by Secretary Chapman on April 21, 1950 that NPC undertake a study to:

- Review the Bureau of Mines' estimates (1) of the cost of producing synthetic liquid fuels, and (2) of comparative costs of producing liquid fuels from crude oil.
- Prepare independent cost estimates.
- Make recommendations of ways and means, if any, to improve future cost estimates by the Bureau of Mines.

That this study is no slap-dash cost estimate is indicated by a few statistics: It cost $300,000; 115 outside companies were consulted; 400,000 miles were covered by the 164 men who developed the information.

Two of Three: Work done by the Synthetic Liquid Fuels Div. of the Bureau of Mines falls into three categories:

- Coal hydrogenation.
- Utilization of oil shale.
- Fuels from synthesis gas provided by coal gasification.

But the Bureau did not have adequate information for a dollars-and-cents analysis of the synthesis gas process. These data have been supplied only recently; consequently this process was not considered in the report.

Too, this study was concerned only with the process steps upon which the Bureau of Mines' cost data have been based. The scope of the committee's investigation did not include an analysis of alternative processes developed

by industry that had not been made available to the Bureau of Mines. Nor is any attempt made to determine costs for particularly favorable and unique situations. Rather the estimates are based on the average situation.

In each case a raw material reserve of 20 years has been set as a minimum. The product is to be primarily gas and diesel fuel conforming to present specifications. Labor, material and equipment costs have been adjusted to January, 1951 levels. Chemicals and LPG have been credited as by-products.

Study Took Time: According to the Committee much more time was required for this study than had originally been allotted as ". . . necessary process design data had not yet been sufficiently developed by the Bureau of Mines."

In the coal hydrogenation process, clean, finely crushed coal is mixed with heavy recycle oil to form a paste. This, with a catalyst, is charged under a pressure of 10,000 psi and at 900 F to a reactor. The liquid from this hydrogenation is separated by distillation into a light oil and a heavy oil. A portion of the heavy oil is recycled to make more paste from additional coal. The rest is coked to dispose of ash and used catalyst.

In a second stage the light oil is further hydrogenated over a fixed bed catalyst at 10,000 psi and 900 F to gasoline and liquefied petroleum gas (LPG). Phenol, cresols and xylenols can be recovered from the first-stage product for sale as chemicals. If not recovered, this fraction is also hydrogenated in the second stage. Conventional petroleum refining processes are used for final treatment of the liquid "crude."

Oil shale operations are based on the assumption that shale is mined by techniques developed by the Bureau of Mines. After crushing, it is charged to a retort where the oil is driven off by heat evolved from combustion of the carbon that remains in the shale after completion of retorting. The crude liquid shale product is extremely unstable and contains nitrogen and sulfur compounds.

After coking the liquid distillate is catalytically hydrogenated at 1,100 psi and 835 F. This product is treated by conventional refining means.

Weighing the Two: For the estimate on coal hydrogenation the committee at first had only a 1949 report (RI 4564). The cost data in this report were brought into line with present-day figures. But even with this adjustment, the Bureau's estimates were approximately 20% below those

CHAPMAN: The answer to his question cost $300,000.

prepared by the committee. But, says the committee, the Bureau omitted such items as certain off-site facilities, interest on borrowed capital, income taxes, profit on investment and other details.

Detailed analysis of these differences is now in the hands of the Bureau. The committee thinks the cost estimates that have been developed are as authoritative as any that can be obtained without commercial operating experience.

In the case of shale oil, the Bureau had no formal report to serve as a basis of comparison. But the Bureau cooperated closely in making information available on this procedure. In the end, the only large difference that existed between the Bureau and the committee was that resulting from alternate means of entering capital cost figures such as interest, taxes and profit.

A summary of the data developed by the committee is shown in the accompanying table. Price Waterhouse & Co. were retained to check the accounting procedures utilized. In the usual dry terminology of the accountant: "It is their opinion that the basic accounting data used have been computed in accordance with generally accepted accounting principles."

Oil Shale On Top: Many conclusions can be drawn from the report. First, production of synthetic fuels by coal hydrogenation is uneconomical. Second, although fuel from oil shale is still appreciably more costly, its cost is close enough to the cost of liquid fuel from petroleum that ". . . this source of fuel warrants continued attention by the industry."

In one other concluding note the committee marks ". . . that an effort is being made to promote the installation of a coal hydrogenation plant as a source of chemicals, the most important of which are benzene, toluene and xylenes"—presumably Colchem Corp. *(CW, Oct. 20)*. Although a study of this proposal is not within the scope of the assignment, the committee notes that it is advised that such chemicals can be produced from petroleum at a lower cost.

Imported Labor

Government defense programs have brought both blessings and problems to the Southern turpentine and rosin industry. On the one hand, demand for naval stores has risen sharply in recent months; but on the other, the industry's labor force has been absorbed into defense work. One answer: Mexican labor.

Trying to meet government demands for naval stores, the American Turpentines Farmers Association is investigating all principal sources of labor, particularly the migrant Mexican workers, made available in this country through a U.S. Dept. of Agriculture program.

Large numbers of Mexicans are used in agricultural work in the Southwest. They are brought into the country for periods not less than six weeks and not more than six months. The Association's idea is to import Mexicans for the heavy producing season —late spring and the summer.

The Big Question: But the big question is whether the Mexicans could become skilled enough, quickly enough, at the various piney wood jobs to make their employment useful under the terms of the Agriculture Department's program. The association feels that, with the new and simpler methods of handling the trees, they could handle the job, and is seriously considering their use.

•

Officials of the International Chemical Workers (AFL) local at the Ansco Division, General Aniline & Film Corp., plant at Binghamton, N.Y., are wondering why the Wage Stabilization Board is delaying approval of the new contract negotiated with the company last summer.

Although application for approval of fringe benefits written into the contract was made last July, the union is still waiting for WSB okay.

One of the new items in the fringe benefits: four hours off with pay on Election Day. Under the old contract, workers are given only the two hours necessary under the law in New York state.

PAINT SPRAY SOLARIUM: Competitors build a market.

Common Bond

Get twelve companies—most of them competitors—to pool together in an exhibit at an industrial exposition? "Impossible," you'd say nine times out of ten, and be right. But that's what happened at the 1951 Paint Industries Show last week when competing raw materials and equipment manufacturers teamed up to tell formulators about hot-spray coatings. Hot spraying, of course, is the method of applying protective and decorative finishes, particularly lacquers, that is enjoying increasing popularity for furniture, airplanes, autos and other products (*CW, Aug. 11*). Paint makers who are supplying or will be called on to supply the new formulations should know the whole hot-spray story, reasoned interested manufacturers of suitable raw materials and equipment, and the logical place to talk to most of them was the Paint Industries Show held in conjunction with the national meeting of the Federation of Paint and Varnish Production Clubs at Atlantic City early this month.

Under the organizational direction of Hercules Powder Co., five chemical companies, five heating unit manufacturers and two spray gun makers joined forces in a "Hot-Spray Solarium" that was one of the feature attractions of the show. Although each company had its representatives, products and/or literature on hand to explain its place in the paint formulator's hot-spray future, product promotion was subordinate to an institutional exposition of the new coating technique. For the companies involved decided that showing production men where hot-spray finishes are going, explaining how to formulate, and displaying application equipment would arouse interest that would mean bigger future sales for all of them.

Start to Finish: It was easy to see how far the process has come since developed by Commercial Solvents' Charles D. Bogin*, for on display was the first heating unit and spray arrangement he used to apply these high solids lacquers (40% in contrast to the less-than-20% solids common with cold-spray formulations). This seemed crude alongside of modern heaters and spray guns developed over the last few years in response to demand from industrial lacquer users.

Also pointing up the Military's approval of such finishes were shell cases, tank parts, grenades and an airplane wing tip. Exhibits from the furniture industry, in which hot-spray has made the greatest gains, showed the fine finishes that could be obtained with one-coat applications. Parts of automobiles, vacuum cleaners, Venetian blinds, soft drink dispensers, etc. suggested the variety of metal products now being finished with hot-spray coatings.

And in addition to the exhibit, a Hercules motion picture on the process was shown at different times to those who wanted to see the application technique in action.

Eager Askers: Paint makers, their appetites whetted by this display of potential business, turned to the chemical companies for technical information on formulations. Those present were solvent manufacturers Carbide, Commercial Solvents, Publicker Industries and Shell Chemical, all competitors but all willing to share space to keep close to the sales-source of the booming new outlet for their products. For the big difference between the new and conventional lacquer formulations is in the choice of solvents. Hot-spray solvent combinations

* Basic patent on hot-spray was issued to Commercial Solvents in 1939, dedicated to the public by the company last year.

Current List of DPA-Certified Chemical Facilities

cannot employ fast-evaporating solvents since the lacquer is sprayed at about 160 F.

Companies producing heaters (to lower the viscosity of the lacquer and permit application at higher solids) were on hand to explain how they work, and what formulations perform best in them. These included Bede Products, Beck Equipment, Pol-Flo Paint Sprayer, Reliable Products Manufacturing and Spee-Flo.

Spray gun manufacturers DeVilbiss and Binks Mfg. wanted formulators to see how their products fitted into the picture; and like the heater suppliers, undoubtedly figured that it is good business for a lacquer manufacturer to have the name of an equipment maker at tongue's tip when calling on customers.

The fifth chemical company—Hercules—didn't even have a stand in the solarium, but did have its literature available. Its big interest in hot-spray is as a market for nitrocellulose, and seeing solvents suppliers and equipment makers spread the word about it to sales- and production-conscious paint makers was reward enough for its efforts in getting the group together.

Something For Everybody

The more ways you can package the product, the more sales you will have. That seems to be the big axiom these days in the marketing of broad-spectrum antibiotics. Pfizer's terramycin, with 13 forms on the market, and Lederle's aureomycin, with 12, are proof enough of this latest twist in the wide-open antibiotics field.

Both terramycin and aureomycin are now being sold in the form of ophthalmic ointments, ophthalmic solutions, otic solutions (for the ear), soluble tablets, troches, solutions for intravenous use, dental cones, dental paste, and the regular capsules. In addition, terramycin comes as elixir, oral drops, nose drops, and vaginal suppositories. Aureomycin can also be had in Spersoids (for children) and Pharyngets.

Wide Appeal: This wide-appeal program is actually a matter of taking advantage of what is on hand. Unlike other antibiotics, the broad spectrums lend themselves to use in many forms with great effectiveness.

As Pfizer readily admits, the whole program of multiple packaging is designed to give the drugs greater appeal to physicians. Although Lederle was first in the field with their diversified line of aureomycin forms, Pfizer has recently caught up and passed them in total number of different forms available.

Pfizer's entire recent ad campaign is geared to placing the stress on the number of different forms it has. Full page ads by the company continually hammer home the point that terramycin can be bought in more forms than any other antibiotic.

Taking Advantage: Probably Pfizer considers the heavy campaign on special forms one of the best ways to catch up with aureomycin's headstart in the over-all field. But the immediate cause of its decision is that terramycin, apparently, is the more versatile of the two broad-spectrums. Its high solubility and stability in solution has enabled Pfizer to bring out the elixir, oral drops, and nose drops, which Lederle has not done.

With this initial advantage, Pfizer is pushing its elixir, oral, and nose drops, even to the extent of developing a special mixer, dubbed the Elixir-Mixer. The elixir and oral drops come to the pharmacist in the form of a diluent and powdered terramycin in separate bottles; hence the new tool for easy mixing. Essentially, a sales device, the mixer shows the intensity with which Pfizer is conducting its sales campaign for the special forms.

While Pfizer is concentrating mainly on diversified dosage forms for human consumption, it has not neglected the animal therapy field. In addition to capsules, veterinarians can get terramycin in ointment, intravenous solution, ophthalmic ointment, and udder infusion ointment.

Sales Up: Although first in the field, Lederle now appears to be trailing in the dosage form battle, spreading its advertising more thinly. Still farther behind is Parke, Davis' chloromycetin, the third broad-spectrum antibiotic. It has not been placed on the market in anywhere near the number of forms in which the other two are available.

This points to an apparent difference of opinion as to the value of the wide-dosage campaign, but Pfizer has figures on the rapidly increasing sales of terramycin in the special forms to justify its outlay of time, money, and effort in their development and marketing.

EXPANSION . . . .

Chlorine and Heptachlor: Arvey Corp. will double the size of its electrolytic chlorine facilities at Memphis, Tenn. At the same time the company is adding a unit for production of heptachlor, boll weevil insecticide. Cost: $2 million.

•

Polyvinyl Alcohol: Production capacity of Colton Chemical Co.'s polyvinyl alcohol plant at Cleveland, Ohio, is to be expanded from 10,000 pounds a month to 50,000 pounds per month with a portion of the proceeds from the sale of 80,000 shares of common stock. Price: $3/share. A portion (33,000 shares) was supplied by certain shareholders; the rest (47,000 shares) was sold by the company. Colton Chemical was known as the Special Chemicals Co. until Oct. 11, when the present name was adopted.

•

Tin, Feldspar and Mica: Lithium is not the only product that Foote Min-

ELIXIR AND DROPS: New forms mean more sales for terramycin.

New Companies:

• Hickory Color & Chemical Co., of Hickory, N. C., has obtained a certificate of incorporation from the North Carolina secretary of state to operate a color and chemical business.

• Carolina Chemical & Engineering Co., Wilmington, N. C., has been organized to manufacture and deal in chemicals.

•

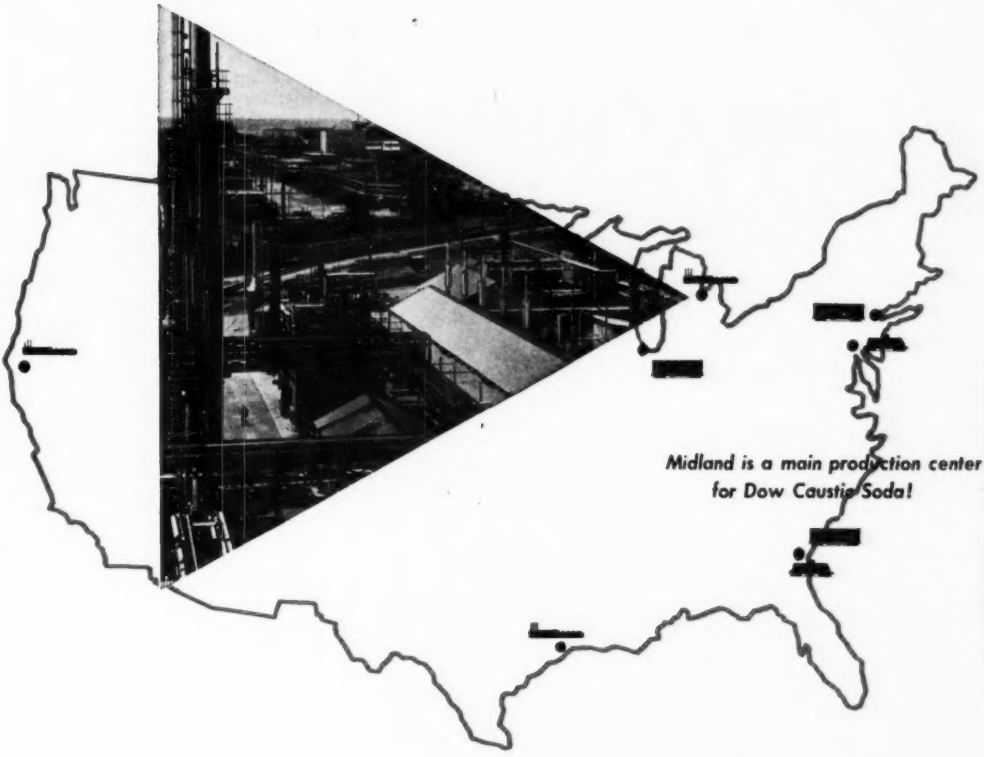
Toluol: Oil & Chemical Products, Inc. is expanding its plant for the manufacture of toluol and aviation gasoline blending stock at its Galena Park (Houston), Texas plant.

FINANCE . . . . .

Diamond Alkali Co.: Shareholders acted (Nov. 15) on the recommendation of the directors that the company authorize issuance of $25 million of preferred stock. A public offering of not more than $12 million of $100 par convertible preferred was proposed for late this year or early in 1952. To further its expansion program, Diamond also plans to borrow $4 million more from the Metropolitan Life Insurance Co. before the end of the year.

•

Dominion Linseed Oil Co., Ltd.: Bondholders were asked on Nov. 14 to consider a reorganization proposal under which McArthur, Irwin, Ltd. and Hart Battery Co., Ltd. are to be acquired. Included in this is the conversion of the $750,000 of Dominion Linseed bonds into 15,000 preferred shares ($15 par) and 15,000 common shares.



FOREIGN. . . . . .

Magnesite: The Brazilian government has authorized Harbison Walker Co., producer of materials for industrial furnaces, to operate large magnesite deposits near Fortaleza, capital of the state of Ceara. Operations will be carried out by a Brazilian subsidiary—Harbison Walker Mineiros Ltda.

•

Sulfur: The current world sulfur shortage has been further alleviated by the discovery of the Fuel Research Institute at Dhanbad, India, that large quantities of sulfur can be recovered by washing coal. Experiments at the Nowrozadabad mines show that a single washing yields 11% sulfur, rewashing 20%. A local cement firm now plans to put up a coal washery to supply both fuel for its plant and

How close are you to Midland, Michigan?

Wherever you're located . . . there is a Dow distribution center conveniently placed to serve your needs for Dow caustic soda. Dow has caustic soda plants in Midland, Michigan . . . Texas and California. Besides shipping from these large plants, Dow distributes caustic soda solution from bulk tank terminals in Carteret, New Jersey and Charleston, South Carolina. Caustic soda solid, flake and ground flake are shipped from terminals in Port Newark, New Jersey . . . Chicago, Illinois and Charleston, South Carolina. You can be sure of dependable caustic soda delivery when you take advantage of Dow's nation-wide distribution facilities . . . designed to service your needs.

KOPPERS
Nonyl Phenol

one of a series of Alkylated Phenols

NONYL PHENOL—one of Koppers series of alkylated phenols—is produced in commercial quantities. It is a slightly viscous, yellow to tan liquid; only very slightly soluble in water, but miscible with common organic solvents.

REACTIONS

Two of the three normally reactive nuclear positions are unsubstituted in this alkylated phenol; they are subject to such reactions as acylation, sulfonation, nitration, alkylation, and condensation with aldehydes.

The unhindered phenolic hydroxyl group undergoes such reactions as etherification, esterification, vinylation, ethylene oxide condensation, and formation of nonyl phenoxyacetic acid.

USEFUL APPLICATIONS

The properties of Nonyl Phenol indicate usefulness in the production of modified phenolic resins, non-ionic surface active agents, lubricating oil additives, antioxidants, plasticizers and agricultural chemicals.

PROPERTIES

Boiling Range	**290°–300°C.**
Hydroxyl Number (theory 255)	**250**
Specific Gravity, 30°C.	**.940–.944**
Refractive Index, 20°C.	**1.5118**

FOR FURTHER INFORMATION, write to Koppers Co., Inc., Chemical Division

Though supplies are at present limited by the emergency demand, many known possibilities of Nonyl Phenol make it a most interesting chemical for further study in your own laboratories.

KOPPERS

KOPPERS COMPANY, INC.

Chemical Division

C1-11-7 Koppers Building, Pittsburgh 19, Pa.

1200 tons of sulfur per month as by-product.

Pyrite deposits covering an area of some 12 miles in the coastal area of Karwar (near Bombay) are also expected to yield an additional 4000 tons of sulfur a month. India has been importing some 65,000 tons of sulfur annually, mostly from the United States.

•

Pakistan: Heavy chemical industry, non-existent here four years ago is gathering speed. Sulfuric acid is being manufactured at the rate of fifty tons per day in four plants at Karachi, Lyallpur, Rawalpindi and Rangpur. The Karachi plant also plans to produce hydrochloric acid at the rate of two tons per day.

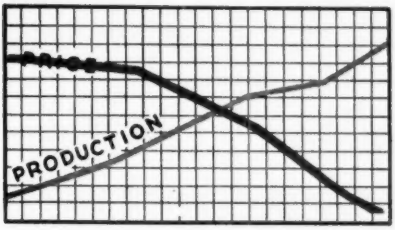
Soda ash for use in glass and sodium silicate industries is being produced at a factory in West Punjab, and as much industrial alcohol as the territory can use is coming from sugar mills in East Pakistan. New plants for the manufacture of oxy-acetylene gases are planned for Karachi and Chittagong to supplement present production facilities at Lahore.

•

Spain: Spanish chemical production figures reveal that production for the first five months of the year in ammonium chloride was 259 tons (384 tons in 1950), in ammonium sulphate 7470 tons (4505 tons in 1950), and in calcium superphosphate 412,673 tons (397,830 tons in 1950).

•

Western Germany: Quality of synthetic gasoline produced by the Fischer-Tropsch synthesis has been so improved that fuels with a 70-80 octane rating can now be made together with first class lubrication oils. Costs of the process have been lowered 30-40%. In place of coke, inferior brands of coal can now be utilized for gasification.



There are at present six Fischer-Tropsch installations in Western Germany. Investments up to 80 million Deutsche Marks ($19 million) will be needed to modernize these plants.

•

Alcohol: "Lenzinger Cellulose und Papierfabrik" at Lenzing, Upper Austria (U.S. zone) is building installations to convert sugar (contained in the residue of staple fiber from fir wood) into alcohol. A yield of 16.5-20 gallons of 96% alcohol can be obtained from each ton of staple fiber.

At present there are six such alcohol plants in Austria with a total capacity of three million gallons. Production for 1950 totaled 1.9 million gallons.

CELANESE*
Butylene Glycols

PRODUCTION LOWERS THE PRICE

1 The new, low price for Butylene Glycols make these versatile Celanese chemicals a practical possibility in hundreds of manufacturing processes.

2 Celanese 1,3 Butylene Glycol is a high boiling, low volatility, low toxicity solvent with hygroscopic properties which make it interesting to the tobacco, cosmetic and related fields as a replacement for or to complement other glycols and glycerine. It is also used for phthalic, maleic and fumaric alkyd resins and polyesters for plasticizers, coatings and laminates and as a solvent for steamset inks.

3 Celanese 2,3 Butylene Glycol with two adjacent hydroxyl groups offers interesting possibilities as a chemical intermediate. High solubility in castor oil and rubber swell inhibiting properties, falling between propylene and dipropylene glycol, offer brake fluid formulators an attractive new glycol. Its high boiling point, excellent solvent and hygroscopic properties, make it of interest for steam set inks, textile lubricants, printing pastes and dyes.

4 Butylene Glycol is being produced in dependable, high volume that assures you continuity of supply and a steady price structure. Write for Bulletins N-26 (1,3 Butanediol) and N-27 (2,3 Butanediol). HOW CAN ISCO PRODUCTS WORK FOR YOU?

in the Chemical Industry

Turning dark to light is not magic when you use Adsorbols. These natural, chemically activated and scientifically controlled clays are effectively used for the bleaching and deodorizing of oils, fats, fatty acids and waxes. Literature gladly sent upon request.

Innis, Speiden & Co., Inc. sells over fifty types of waxes which are used in different industries. Some use them for a glossy surface, others for water repellency, and still others for oil absorption. When you need a wax call on ISCO for the right wax for the right use. Above, ISCO Refined, Crude and Flaked Carnauba Wax.

Iscolized Gums eliminate presoaking and they are processed to give quick dispersion. These are only two features of one of the new products developed by ISCO to cut down manufacturing time.

You'll like ISCOoperation!

When it comes to raw materials for the chemical industry, it will pay you to investigate ISCOoperation. Every step of the way, from selection of raw materials down to the careful control of quality, you'll stand Innis, Speiden way out in front. Our laboratories and our technical consultants will be glad to help you on any problem involving an ISCO product. Write today for full information on ISCO products for your own use. You'll like ISCOoperation—every step of the way.

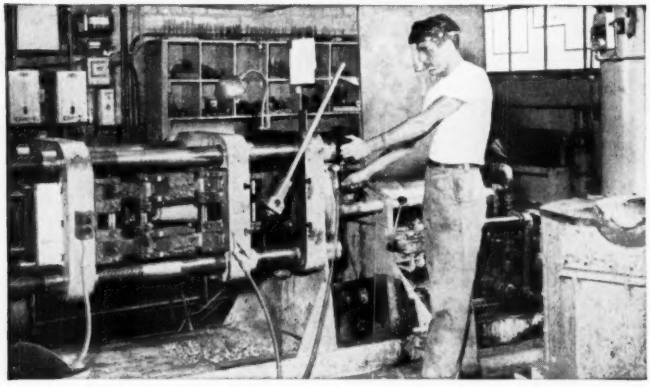
MONSANTO
CHEMICALS — PLASTICS



FOR YOUR INFORMATION

Every month Monsanto publishes these pages of pertinent information which may be helpful to you. This issue discusses:

Hydraulic Fluid Cutting Oil Additive Defoaming Agent
Plasticizers Wetting Agent Intermediates

Additional information on any of these subjects will be provided by any Monsanto Sales Office in response to your request by coupon or letter.

PROOF OF PYDRAUL F-9 SAFETY

Richard N. Patterson, operator of a die-casting machine in the Smith-Johnson Corporation plant, escaped serious injury because his company had switched to Pydraul F-9.

No flash...no fire... when hydraulic line breaks at die-casting machine. Employes escape injury.

Officials and employes of Smith-Johnson Corporation, Los Angeles, are mighty glad the company switched to Monsanto Pydraul* F-9, nonflammable-type hydraulic fluid.

A line leak caused Pydraul F-9 to be sprayed over the area of a die-casting machine and zinc melting pot. There was no flash . . . no fire . . . no blast.

Although the operator of the machine was drenched and fluid was sprayed on about a half dozen men who were observing his job, no one was seriously injured. With an ordinary hydraulic fluid, there would probably have been a flash fire. Property could have been destroyed . . . lives lost.

You can switch to safe, efficient Pydraul F-9 simply by draining your present fluid and refilling.

The nonflammability of Pydraul F-9 has been proved in numerous tests such as:

Pydraul F-9 did not flash or ignite when sprayed, dripped or flooded on molten metal heated to approximately 1,500° F.

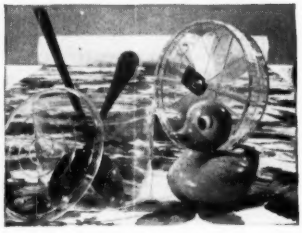
Pydraul F-9 did not flash or ignite when sprayed, at 1,000 p.s.i., into the 6,000° F. zone of an oxyacetylene welding torch flame.

Pydraul F-9 gives you economy and efficiency as well as safety. It shows high resistance to mechanical shear and chemical breakdown. It is high in lubricity and does not corrode metals ordinarily used in machine construction.

For details on safe, efficient, economical Pydraul F-9, mail the coupon or contact the nearest Monsanto Sales Office.

• • • • •

MAIL COUPON for a copy of Monsanto's new Technical Bulletin No. O-78, which gives details on the use of orthonitrobiphenyl as a plasticizer and chemical intermediate.



INVESTIGATE SANTICIZER 8 for molded plastics...coatings...adhesives

Monsanto's Santicizer* 8 is a plasticizer with a diversity of applications that is available for immediate shipment. Santicizer 8 is a mixture of N-ethyl ortho and para toluene sulfonamides. Read these important facts on the uses of Santicizer 8:

In Molded Plastics: One of the leading plasticizers for nylon. Imparts high tensile strength, brilliance and polish, elongation and flexibility to cellulose acetate sheeting and film. Practically insoluble in hydrocarbons, giving outstanding service in products that must withstand gasoline and oil.

In Coatings: Highly compatible with nitrocellulose lacquers; gives excellent brilliance and gloss, flexibility, moisture resistance and adhesion. Compatible with proteins and with zein and casein coatings to at least 50% by weight, improving flexibility, water resistance, gloss and adhesion. An excellent dye solvent, it enhances the brilliance of oil-soluble colors.

In Adhesives: A first-rate plasticizer for use in hot-melt adhesives. Particularly useful for imparting tack and adhesion to polyvinyl acetate and polyvinyl butyral resins. Adds adhesive qualities to lacquers and coatings.

For further information or a sample of Santicizer 8, mail the coupon or contact the nearest Monsanto Sales Office.

• • • • •

Ortho-ETHYLNITROBENZENE is available for immediate shipment from Monsanto. Widely used as an intermediate, ortho-ethylnitrobenzene probably has many undiscovered uses. It may take the place of a chemical that now is difficult to obtain. Contact nearest Monsanto Sales Office for prices and shipping information.

HB-40 extends primary plasticizers ...lowers costs

Regardless of your supply situation on plasticizers, have a look at Monsanto HB-40. You can get it by the drum or carload and at a price so low that it can be the means of lowering your production costs. You can benefit from HB-40 availability and economy without sacrificing quality in your vinyl products.

Monsanto HB-40 (partially hydrogenated terphenyl) is essentially colorless, odorless and practically nontoxic. Since it is nearly water-white, properly stabilized HB-40 can be used in clear and pastel-shaded plastics. Even with substantial amounts of HB-40, such products have excellent heat and light stability.

HB-40 is used as a coplasticizer or as an extender for primary plasticizers in:

Vinyl extrusions—Profile, tubing, belting and wire coating, both electrical and non-electrical.

Vinyl pastes—Organosols and plastisols, for fabric coating, free film, floor coverings and dip coatings.

Vinyl slush moldings—Plastisols for slush molding operations.

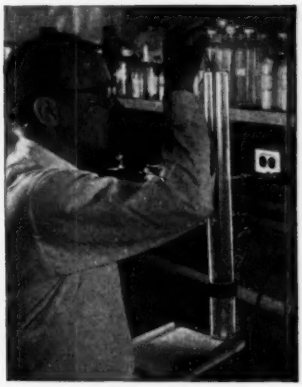
Vinyl calendering—Thin film and sheeting, both supported and nonsupported.

For technical information on the use of Monsanto HB-40, mail the coupon or contact the nearest Monsanto Sales Office.

Santolube 52 improves cutting oil

The addition of Monsanto Santolube* 52 to cutting oil steps up tapping efficiency . . . steps up threading efficiency . . . lengthens tool life.

As little as 2% of Santolube 52 may replace as much as 10% fatty oil component of certain cutting oil types and yet give improved tapping and threading efficiency.



Santolube 52 contains no sulfur or chlorine, therefore it makes practically no difference in the ratio of these elements in your cutting fluid.

Mail the coupon for data on Santolube 52 and for details on its use in cutting oils.

Monsanto AE-1 proves efficient in number of industrial processes

Without AE-1

With AE-1

Monsanto AE-1, a new, high-molecular-weight alcohol-ester, is efficient in a number of industrial applications. It is low in price and available in quantity.

Its use as a defoaming agent is illustrated. The picture at the left shows a solution without AE-1. At the right, you see the same solution to which a small amount of AE-1 has been added. AE-1 is used as a defoaming agent in the production of ethyl alcohol, glycerol, yeast, polystyrene latex water dispersions and in other applications.

Suggested uses include: Plasticizer and coplasticizer for melamine and urea resins, polyvinyl alcohol; in printing ink; solubilizing agent and anti-blooming agent for pentachlorophenol wood preservatives.

Mail the coupon for a copy of Technical Bulletin No. P-140, describing AE-1.

Santomerse No. 1 efficient wetter

If you have processes requiring an efficient wetting agent, emulsifier or detergent, take a good look at Monsanto Santomerse* No. 1.

Santomerse No. 1 is efficient in hard or soft water . . . in hot or cold solutions . . . in acid or alkaline baths. Santomerse No. 1 can be used in operations where the pH is critical because it assumes the pH of the solution in which it is used.

Why not investigate Santomerse No. 1 now? Mail the coupon for a copy of Monsanto's booklet, "*Santomerse No. 1 All-purpose wetting agent and detergent.*"

MONSANTO CHEMICAL COMPANY, 1700 South Second Street, St. Louis 4, Missouri. District Sales Offices: Birmingham, Boston, Charlotte, Chicago, Cincinnati, Cleveland, Detroit, Los Angeles, New York, Philadelphia, Portland, Ore., San Francisco, Seattle. In Canada, Monsanto (Canada) Ltd., Montreal.

Houghton protects every customer *by protecting every drum with* Tri-Sure Closures

E. F. Houghton & Co. of Philadelphia manufactures one of the largest lines of industrial lubricants, metal-working oils, and textile oils and chemicals.

The company built a national reputation on *purity of product*. So since 1936, Houghton has made it company policy to *protect* that purity by equipping every drum with Tri-Sure Closures.*

Houghton, like so many shippers of quality oils and chemicals, uses Tri-Sure Closures year after year, because customers recognize the Tri-Sure *Flange*, *Plug* and *Seal* as positive protection from leakage, pilferage and contamination.

Remember that buyers the world over prefer products that are *securely* packaged. Add another sales feature to your products by specifying "Tri-Sure Closures" on drum orders.

Fission Forecast

Large-scale industrial utilization of radioactive fission products is a good bet for the not-too-distant future.

Potential uses are many, but their realization must await the solution of difficult technological and marketing problems. When these problems finally are licked . . .

Demand for fission products should be substantial, yet dependent in large measure upon their cost.

"**Economic benefits** important to industry, the general public, and the United States Atomic Energy Commission can be realized if large quantities of low-cost, radioactive fission products are made available for industrial use." That's a major conclusion made public this week by the Stanford Research Institute after a long, close look *(CW, Mar. 24)* at fission products and their industrial potential.

Fission products are not to be confused with the pure radioisotopes the AEC has been selling for the past few years. Unlike their more refined cousins, fission products are nothing more than crude by-products of plutonium manufacture. Since 1944, when the atomic furnaces got going in earnest, millions of gallons of these hot wastes have accumulated in huge underground vats at the various AEC installations. The amount is still increasing, and increasing with it is the job of disposal.

What to do with this sea of radioactive debris has been a stickler to the AEC. Disposal is a complicated and expensive process; putting the tremendous radioactivity to profitable work was an appealing, if unexplored, avenue. At any rate the idea was deemed worthy of serious study and that's where the Stanford Research Institute came in. SRI's industrial economists got the job, settled down to a survey of possible uses, size of potential markets, and technological areas in need of further research and development. Their findings could be the herald-note of the atomic era in industry.

Cheaper and Easier: Fission products don't have any new or unique talent to offer industry. They are a source of radiation—the same radiation already obtainable by other more familiar means. Their real value is in their ability to supply this radiation at less cost and in more convenient forms. In this light, they will compete with radioisotopes and radiation-producing machines, but won't stand a chance against coal or gas in jobs which can be done by heat.

From a physical or chemical viewpoint, fission products cover a lot of ground. In the broad sense the term refers to the unrefined mixture of elements resulting from the splitting of uranium in atomic furnaces. For practical industrial purposes this crude mixture requires some degree of processing and would eventually wind up as a series of progressively higher grade products.

The upgrading procedure works like this. After irradiation in the reactor, uranium and plutonium are separated from the charge leaving a heterogeneous mixture of radioactive by-products, water, salts, and certain contaminants. The solid mass remaining after water removal is called "gross fission products." Further treatment to take out non-radioactive contaminants gives "semi-refined fission products." This semi-refined material, separated into groups of isotopes for better definition of radiation, is termed "mixed fission products." A final breakdown into specific isotopes yields "separated fission products." These "separated fission products" contain a number of radioisotopes of which the most important are strontium 90 and cesium 137.

Processing of fission products serves two purposes. The first is concentration, or increasing the activity per unit of mass. But separation according to type of emission is also important. Useful applications of radioactivity are divided into two categories depending upon their need for beta or gamma radiation. Operations which make efficient use of both are not known. Gamma radiation is available from all four groups of fission products; beta radiation may be had from separated isotopes or mixed products from which gamma emitters have been removed.

Tried and true industrial uses for fission products are few, but the field is still in its infancy. In time a growing awareness of its possibilities will hypo development of new and as yet unsuspected applications.

SRI has surveyed potential large-scale applications with an eye for market size based on maximum cost for fission products. The scorecard, broken down according to stage of technological development, reads as follows. Ripe for commercialization:

- Activation of phosphors – Estimated market for tens of thousands of curies* a year at a maximum cost of $50 per curie.
- Static eliminators – Estimated market for thousands of curies a year at a maximum cost of $100 per curie.
- Fluorescent light tubes – Estimated market for hundreds of curies a year at a maximum cost of $100 per curie.
- Radiation source for instruments –Estimated market for hundreds of curies a year at a maximum cost of $100 per curie.

Ready in two to five years:

- Industrial radiography – Estimated market for hundreds of thousands of curies with small annual replenishment at a maximum cost of $5 to $50 per curie.
- Cold sterilization of drugs and foods–Estimated market for hundreds of millions of curies with small annual replenishment at costs within the 1¢ to $2 range.

In addition, a certain amount of basic technical knowledge is available on uses like surface sterilization of fruits and vegetables, but because of a lack of applied research, a date of commercial readiness cannot be estimated. Closer to the chemical scene, applications like the promulgation of polymerization, halogenation and oxidation are still little more than food for thought.

Problems Galore: Before commercialization of any use can be attempted, a great many problems must be overcome. On the technical side they exist in the design of plants to process fission products, development of products in forms suitable to different end uses, need for special handling equipment and instrumentation. Marketing won't be easy either. Pricing policy, promotional effort, engineering services, mechanics of distribution, training personnel, patent policy, safety regulation and education all present their own special headaches. And all of these considerations are over and above the research needed by the consumer to polish up his actual process application.

At this stage of the game fission products are just a tempting pencil-and-paper industrial proposition. Even AEC isn't decided on whether it's advisable to make the radioactive wastes available to industry. But in the face of stepped-up atomic development it's better than even money that wholesale trade in hot atoms is not too distant.

* Amount of material equivalent in radiant energy to a gram of radium. Curies may be converted to watts, a unit of power more useful to industry.

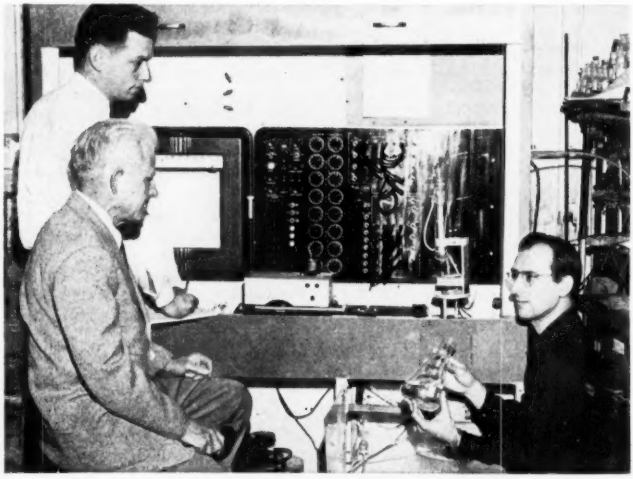
Triple Threat

An electronic instrument that qualitatively analyzes unknown solutions, determines concentrations of dissolved substances and separates out pure fractions has been developed by researchers at the University of California.

Designed and built by chemists Alfred Deutsch, Max S. Dunn and Richard Zuckerman, the new instrument – a continuous flow recording spectrophotometer–has the makings of a prime research tool for analysis and fractionation of ultraviolet-absorbing substances. It's accurate and automatic, reduces to a fraction the time taken up by tedious chemical methods.

Theory and operation of the spectrophotometer is simple enough. The solution to be analyzed is first passed through a resin chromatographic column. Upon elution with the proper selective solvent, the adsorbed ions are carried through a modified Beckman spectrophotometer; per cent transmission and volume throughput are recorded. Fractions corresponding to each optical density peak are drawn off by means of electrically-operated valves activated by the recorder. Either the analysis or separation step may be bypassed when desired.

Talent For Genes: Biochemical problems will have first call on the machine's attentions. It should prove especially valuable to cancer research by supplying much-needed data on the occurrence of nucleic substances in normal and pathological cells. Another use for its talents will be in basic studies of genes and chromosomes.



Ways and means of commercializing the instrument are now being investigated. It's adaptable (separation capacity is limited only by the size of the chromatographic column) and should be useful to many industrial research laboratories. Cost, now estimated at about $10,000, could be reduced considerably by quantity production.

Now It's A to P

A new citrus by-product will have its commercial debut this week. It's vitamin P, an anti-radiation sickness factor showing additional promise in the treatment of tuberculosis. The Pasco Packing Co., Dade City, Fla., is in production with a process developed at Florida Southern College.

Vitamin P, a discovery of Nobel Prize winner Albert Szent-Gyorgy, made news recently with its ability to offset the harmful physiological effects of radiation. Experiments on laboratory animals showed that the vitamin upped chances of survival after a stiff dose of X-rays.

Significance of this revelation is immediately obvious to the medical

DEUTSCH, DUNN AND ZUCKERMAN: Just a flip of the switch.

DEVELOPMENT NEWS

NEW PLURONICS HAVE WIDE RANGE OF APPLICATION

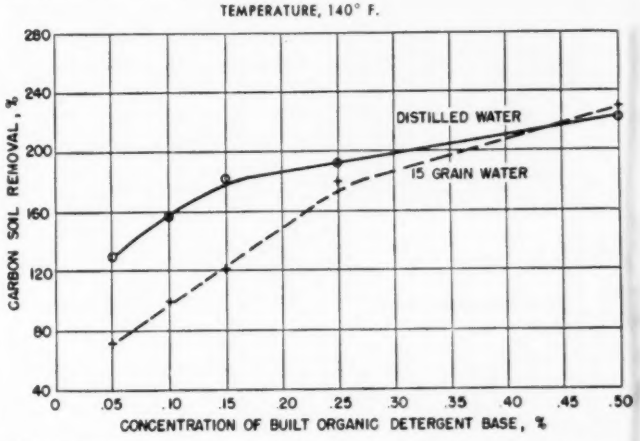
Four Now Available . . . Controlled Hydrophobic Action Offers Other Future Possibilities

The Pluronics, a series of nonionic surface active agents recently developed by Wyandotte, embrace a group of products that offer properties of superior detergency and complete rinsability.

Four Pluronics are now available. Many others of varying molecular weight, given any hydrophobic-hydrophilic ratio, can be developed to meet requirements exactly.

Three of the Pluronics are liquid — Pluronic L44, Pluronic L62 and Pluronic L64. The fourth, Pluronic F68, is a free-flowing flake. All contain 100% active agent and have no diluent or filler. In a test of acute oral toxicity and acute intravenous toxicity, Pluronic F68 has been found to have a relatively low order of toxicity.

Pluronics Outstanding in These Applications



Textiles. In the manufacture of all fabrics—wool, cotton, silk and synthetics—the Pluronics have shown their usefulness in applications of kier boiling, desizing, boiling off, scouring, lanolin recovery, size removal and many others.

Plasticizers. Outstanding among surface active materials for this application, the Pluronics are also suitable plasticizing agents for phenol formaldehyde and low molecular weight polystyrene resins.

Formulated Detergents. Field evaluations indicate that the Pluronics will distinguish themselves in detergents for use in mechanical dishwashing, general dairy cleaning, detergent sanitizers, home laundry, location rug cleaning, and as a scouring powder and detergent sanitizer.

Dentifrices. Virtually tasteless and relatively non-toxic, Pluronic F68 is a unique nonionic detergent that has fine possibilities in toothpaste and tooth powder formulations.

EFFECT OF CONCENTRATION ON CARBON SOIL REMOVAL PROPERTIES OF BUILT ORGANIC DETERGENT BASE. 30% ORGANIC DETERGENT BASE (40% PLURONIC F68 – 40% KREELON 4D – 20% CARBOSE D) + 45% SODIUM TRIPOLYPHOSPHATE + 25% SODA ASH.

• Here is one of many successful uses of Pluronic F68. It shows how a free-flowing organic detergent base may be used in the development of a completely built detergent. The effect of concentration on the detergency properties of this composition was studied in both distilled and hard water over a range to include typical use concentrations. Whiteness retention values were 200% or greater at all concentrations above 0.05%. Results of carbon soil removal tests in distilled and 15-grain water are graphed above.

RESEARCH . . . . . .

profession. Vitamin P should be a valuable adjunct to the radiation therapy of cancer. Moreover it could also play an important part in lessening the potential human toll of an atomic war.

Exact mechanism of the vitamin's protective action is still not clear. But this much is known: Vitamin P is an anti-hemorrhagic agent; and internal bleeding—which goes hand-in-hand with radiation sickness—caused many of the deaths following the atom blasts at Hiroshima and Nagasaki. The irradiated laboratory animals also succumbed from loss of blood.

Hopes that the new vitamin may be of use in the treatment of tuberculosis were fostered by a report out of Florida that the TB bacillus is easy prey to the vitamin in vitro. But this work is still too young for anything more than a hint at the vitamin's possibilities.

Needed, a Buyer: Pasco Packing Co. extracts vitamin P from molasses made of citrus hull juices. Initial production will be about 50 pounds a day. Although none of the new citrus vitamin has been sold yet, Pasco probably will market the product through the U.S. Vitamin Corp.

Credits for the manufacturing process rightfully belongs to James B. Redd, former director of citrus research at Florida Southern College, and Boris Sokoloff who heads up the Florida Southern Bio-Research Laboratory. Together with Walter H. Eddy, responsible for much of the biochemical investigation, they have sparked the development of a new and potentially important facet of the citrus by-product industry.

•

Piperidine's Back: Piperidine, conspicuous by its recent absence, is once more available from the Eastman Organic Chemicals Department of Distillation Products Industries. A high-purity product, the compound is being offered in small quantities for research and development purposes. At one time a drum-quantity chemical, piperidine bowed out when a shortage of catalyst nickel put an economic squeeze on commercial production.

•

More Space: A new research building at the Charleston (W. Va.) plant of Westvaco Chemical Division (Food Machinery and Chemical Corp.) is due for completion about the middle of next year. The new laboratories, will cost the company $500,000, accommodate about 120 researchers.

•

New Antibiotic: Researchers at the University of Illinois have isolated

This announcement is neither an offer to sell nor a solicitation of an offer to buy any of these Shares. The offer is made only by the Prospectus.

248,805 Shares

Air Reduction Company, Incorporated

4.50% Cumulative Preferred Stock, 1951 Series
(Par Value $100 Per Share)

Convertible prior to December 1, 1961

Rights, evidenced by subscription warrants, to subscribe for these shares have been issued by the Company to its Common Stockholders, which rights will expire at 3:00 o'clock P.M. Eastern Standard Time on November 19, 1951, as more fully set forth in the Prospectus.

Subscription Price $100 a Share

During and after the expiration of the subscription period, the several underwriters may offer shares of Cumulative Preferred Stock, 1951 Series, at prices which will not be below the Subscription Price set forth above, less, in the case of sales to dealers, the concession allowed to dealers, and not more than either the last sale or the current offering price of the Cumulative Preferred Stock, 1951 Series, on the New York Stock Exchange, whichever is greater, plus accrued dividends, if any, and an amount equal to the Stock Exchange commission.

Copies of the Prospectus may be obtained from only such of the undersigned as may legally offer these Shares in compliance with the securities laws of the respective States.

RESEARCH . . . . . .

endomycin, an antibiotic produced by an unidentified species of the mold streptomyces. Early tests have shown the substance effective against many pathogenic fungi and gram-positive bacteria. The antibiotic has been prepared as an acid and salt, both stable to heat, acid and alkali.

•

PVA News: Parke, Davis & Co. researchers have found that foods which in powdered form normally tend to absorb moisture, can be converted to fine, free-flowing, non-hygroscopic products by mixing with polyvinyl alcohol before drying. Here's how it's done. Soluble coffee, for example, is dissolved in water, mixed with aqueous polyvinyl alcohol, dried in vacuo and ground. Milk and eggs respond to the same treatment.

•

New Wing: Mann Research Laboratories, Inc., a new subsidiary of Mann Fine Chemicals, Inc., has been set up to consolidate research and production of the company's line of chemicals. Facilities for the new organization will be located in Passaic, N.J.

•

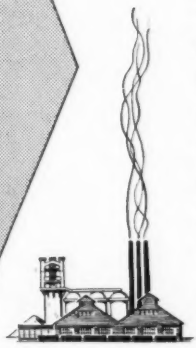
Exposed: Reversion in storage is one big reason why soy oil has never been more popular in salad oil formulations. Researchers at the U.S.D.A.'s Northern Regional Research Laboratory (Peoria, Ill.) have just put the blame on certain aldehydes as cause of the odorous trouble. Degradation of linolinic acid is believed to be the mechanism of formation of the disagreeable aldehydes.

•

Wax Extender: Emery Industries, Inc., is now offering C-842-R, a white crystalline long-chain ketone. The compound is insoluble in water and only slightly soluble in hot alcohol and ether. Wax extender looks like a probable use.

•

Dutch Treat: Holland's first try at the treatment of cancer with radio-active cobalt will begin shortly at Maastricht hospital. The isotope was delivered from Oak Ridge, donated to Dutch medical researchers with the compliments of the U.S. European medics feel that cobalt soon will supplant radium as the therapy of choice.



•

Soap Test: Spectrophotometric analysis is the basis of an accurate new technique for determining hexachlorophene in soap. The procedure calls for treatment of the soap with alcohol, barium bromide and ferric chloride followed by a spectrophotometric check at 550 millimicrons.

RIGID PVC (Geon) FABRICATION: Gear housings now, needle valves next.

Plants of Plastic

Plastic developments carry double significance for the chemical industry: more outlets, new equipment.

A market of 100 million lbs. for structural shapes of rigid PVC is foreseen in five or ten years.

An English machine and a French fiber highlight foreign contributions as activity here boils over.

Developments in the fabrication of plastics that broaden the scope of end usage have always borne a commercial significance for the chemical industry, since it supplies the raw material. Now developments in molding plastic equipment will have a double effect. Not only will they provide additional outlets for chemicals; they will give the industry new structural shapes for its corrosive processes.

At present, three plastics are destined for wider application as construction materials for the process industries: unplasticized polyvinyl chloride (PVC), polyethylene and reinforced polyesters. And of the three, rigid PVC is the fastest growing.

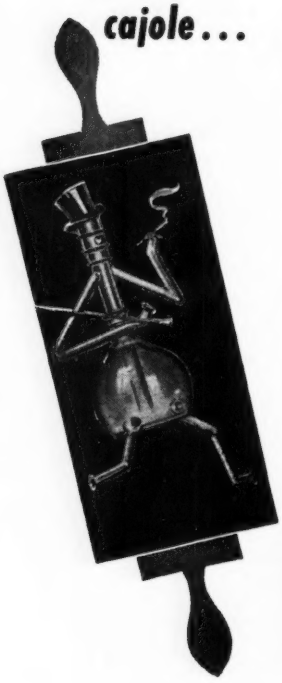
One resin producer has made a market survey, figures that, with normal growth, structural shapes made of rigid PVC will be taking 100 million lbs. of the resin in five or ten years. Unquestionably, the present shortage of metal will play a big role in putting the material on a commercial footing. Although most resin producers and plastic fabricators shy away from the word "substitute" in connection with plastics (they prefer to think of them as replacements—either superior or cheaper) none can deny that the metal scarcity has given a tremendous impetus to plastic development.

Imported from England: Rigid PVC has been used extensively in Europe for some time but only recently has it gained any acceptance here. And, as might be expected, some of the European know-how is being imported. The Stokes-Windsor extruder, for example, has just been introduced in this country by the F. J. Stokes Machine Co. It has come to this country by an indirect route: It was developed in Italy, patented in Germany, but is made in England for delivery in the U.S.

Stokes, however, won't be merely a distributor. It will stock a complete line of parts, will install a unit of its own for demonstration and engineering purposes.

Capable of forming pipes up to 17 in. in diameter and 22 ft. long, the Stokes-Windsor can extrude tapes, sheets, other forms; and can be used for compounding, coloring and pelletizing. At least five of the machines have been installed here for producing rigid PVC pipe.

From France: Another import item that opens up some attractive possibilities is a rigid PVC fiber for filter cloths. The fiber is made by the Societe Rhoyvyl (Meuse, France); distribution here is being handled by Julian Cerf (New York City). The fiber is said to be suitable for other uses, but the accepted resistance of PVC to chemicals makes it a natural for filter cloths. Presently, National Filter Media Corp. is weaving it for that purpose, but admits to having difficulty in the fabrication. An indication that the firm thinks the material looks promising is the fact that it has doubled its December order for the fiber.



Secret of the French process is carbon disulfide, which does not dissolve the PVC but exerts a synergistic effect on another solvent (of undisclosed formula) which does dissolve it. The result is neither a plasticized strand nor is it a copolymer like Vinyon fiber or saran. Societe Rhovyl produces it in four forms, three of which are suitable for filter cloths.

American Lucoflex is also importing French material for distribution in the U.S. From St. Gobain (France) it gets Lucoflex polyvinyl chloride forms, which it sells to three American firms for fabrication into pipe and other equipment. Lucoflex Plastic Fabricating Inc. (Medway, Mass.) makes structural shapes for the New England area, E. L. Cournand (N.Y.) for the Middle Atlantic states and Van Dorn Iron Works (Cleveland) for the Midwest.

At Home: Van Dorn, however, is working on a non-exclusive basis, uses Goodrich's Geon resins as well. A big maker of jail bars, Van Dorn started fabricating rigid PVC last February. Right now it is doing custom jobs only—the customer furnishes the blueprint and Van Dorn quotes prices—but it hopes eventually to start making standard shapes.

Among the installations the company has already made: tank liners, air and fume ducts for acid tanks, filter tanks, liners for acid-regenerating systems and is in the process of replacing a series of rubber-lined tanks with rigid PVC. Van Dorn reports that it is getting an English extruder (probably the Stokes-Windsor) which should help it establish a business for standard shapes.

Chemicals that persuade... convince... cajole...

The time and hour call for chemicals with compelling personalities... chemicals with dynamic qualities that IMPROVE YOUR PRODUCTS...that make them **look better, smell better, taste better.**

Dodge & Olcott has such chemicals and continues, as it has for the past 152 years, to develop new techniques, new materials, and excitingly new fragrances that answer the need and desire of American industry... that will evoke **popular demand** for your products. Consult D & O.

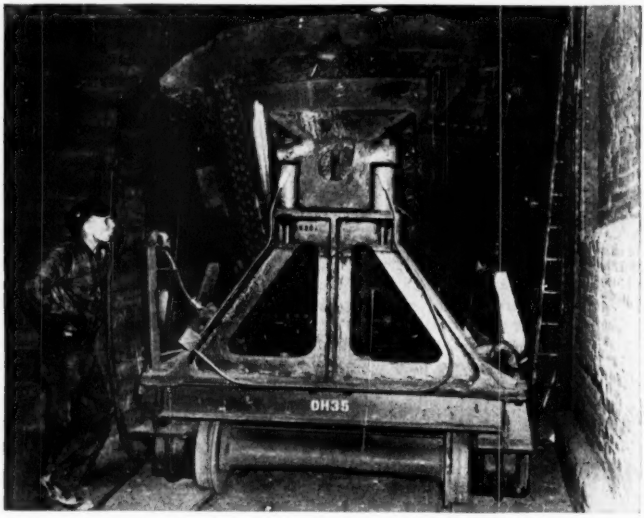
PRODUCTION . . . . . .

Also in Cleveland, American Agile, while confining its efforts to polyethylene now, will go into production of rigid PVC shortly after the first of the year. The company has doubled its working staff, is moving into a new plant in Cleveland this week. As soon as it is settled in the new home, American Agile will start making its plans for PVC.



Clopay Corp. (Cincinnati) is another newcomer to the PVC derby. It sells the material under its trade mark, Tuffstuff. Elmer E. Mills (Chicago) reports that it is experimenting with PVC, may soon go into production. And a New England firm is in the process of concluding arrangements whereby it will become exclusive distributor for a manufacturer of rigid polyvinyl chloride shapes. Early in December, it will reveal that it will soon market a line of PVC equipment, from needle valves to fume ducts.

Steere Enterprises has already put the chemical inertness of PVC to good use. It has coated low-carbon nuts and bolts with a Goodrich Geon resin. They are now being used by Industrial Rayon *(C.W. Nov. 10)* as a replacement for stainless steel ones—at 14% of the price of stainless.

Other companies which are—or soon will be—making pipe from rigid PVC: Ideal Plastics (Long Island), Sandee Mfg. Co. (Chicago) and Hedwin Corp. (Baltimore).

One dark spot in an otherwise bright picture for rigid PVC: A Midwest company reports that it has $200,000 worth of rigid PVC on the shelf. It says that it was very enthusiastic about PVC last year but has cooled on the idea since. However, neither the resin producer nor the firm's competitors can hazard a guess why the company has changed its stand.

Competition: Rigid PVC pipe and structural shapes will run up against some formidable competition, including PVC's chemical cousin, saran. Most of the saran output (90%) is going into monofilaments for fabrics and screens, but there is an established market for saran pipe and fittings. Like PVC, saran is inert to most chemicals, but its high-temperature performance is superior to straight PVC. Neither are suitable for constant operating temperatures in excess of 170-180 F. Saran, however, can be occasionally treated with boiling water without damaging effects.

Large-Scale Electronic Weighing

EXACT CHEMICAL ANALYSIS of molten steel is assured at the Standard Steel Works (Baldwin-Lima-Hamilton Corp.) by Baldwin electronic weighing equipment. Automatic indication of the weight tells the operator how much alloy has been added. Sensitive element is a strain gage—made of very fine wire grids. As the strain gage is deformed (either by compression or tension) the electrical resistance of the wire changes. This change is an accurate measure of the strain or weight. The same principle has been applied in Baldwin equipment for the chemical and petroleum industry to obtain pressure readings in pipe.

You Get Trustworthy Liquid or Gas Cooling With Great Cooling Water Savings from the NIAGARA AERO HEAT EXCHANGER

● You can cool air, gas, water, oils, chemicals, electric and power and process equipment, engines, mechanical processes with lower cost and really accurate control of temperature with the Niagara Aero Heat Exchanger.

You are assured of uniform, constant production and quality from any process . . . steady, reliable operation . . . lower cost for more dependable cooling. You can have closed system cooling with freedom from scale, dirt, corrosion and maintenance troubles. You can accurately cool more than one type of liquid with one machine.

The Niagara Aero Heat Exchanger uses atmospheric air to cool liquids and gases by evaporative cooling. You can remove heat at the rate of input to keep accurate control of gas or liquid temperature. You can put heat back into the system to save the losses of a "warm-up" period or to equalize the effect of load variations.

Great savings in cooling water and savings in piping, pumping and power return the cost to you quickly. The Niagara Aero Heat Exchanger can save you approximately 95% of your cooling water cost. Write for Bulletin 96.

NIAGARA BLOWER COMPANY

Over 35 Years Service in Industrial Air Engineering

Dept. C.I., 405 Lexington Ave. New York 17, N. Y.

Experienced District Engineers in all Principal Cities

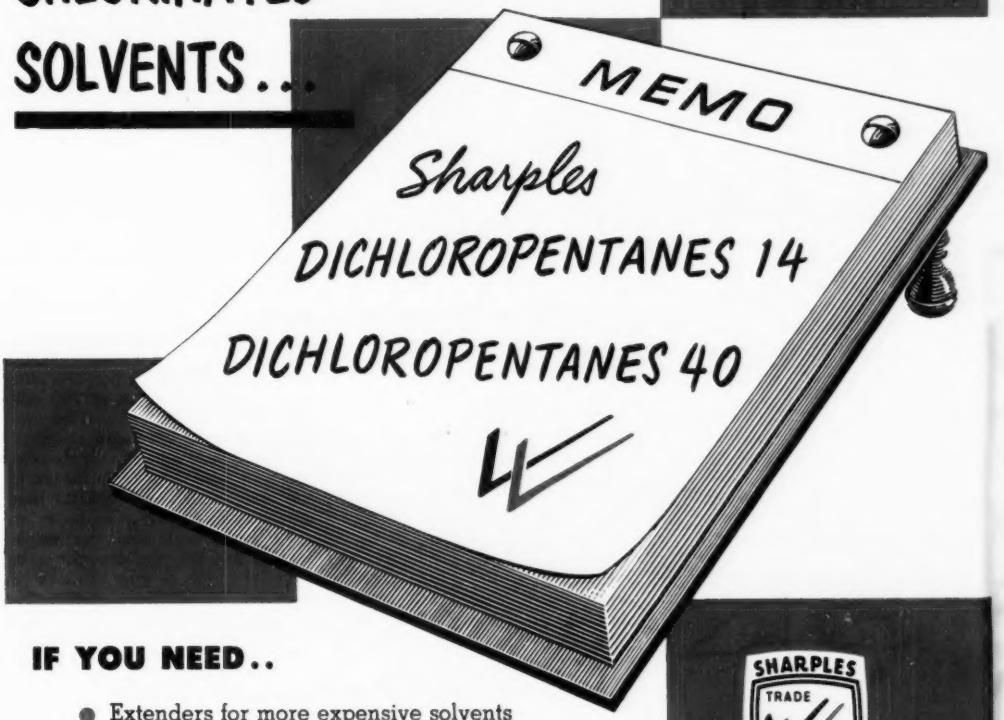
PRODUCTION . . . .

USCOLITE FUME DUCTS: Plus feature is high impact strength.

The bulk of saran pipe is currently fabricated (under Dow license) by American Hard Rubber and Elmer E. Mills. Dow itself manufactures saran-lined steel pipes and fittings; the material is marketed by the Saran Lined Pipe Co. (Detroit).

U.S. Rubber's Uscolite plastic products are also worth watching. Competitive to saran (although 10% higher in price), the material has established a market in the chemical industry too. It has been used to make all-plastic fume ducts (including rivets) and a number of other pieces of processing equipment. Its resistance is good, but is not recommended for temperatures over 170 F. Biggest plus feature is its high impact strength.

Uscolite is the trade name of U.S. Rubber's line of plastic equipment. It is now being made of Krelastic resins (copolymers of butadiene, acrylonitrile and styrene). However, U.S. Rubber, with its polyvinyl production and molding know-how, could conceivably make Uscolite equipment from rigid PVC. In that case, it could loom as one of the big factors in the field.



Favorite Son: Rigid PVC structural shapes will also be competitive to

SARAN PIPE: Formidable competitor for its chemical cousin.

THE BARRETT DIVISION
ALLIED CHEMICAL & DYE CORPORATION
40 Rector Street, New York 6, N. Y.

In Canada: The Barrett Company, Ltd., 5551 St. Hubert Street, Montreal, Que.

PRODUCTION . . . .

polyethylene, the packagers' favorite son. Carlon Products, one of the biggest manufacturers of plastic pipe, turns out all types of low-pressure lines for the chemical industry, is using polyethylene exclusively for the job. And American Agile has a versatile line of polyethylene products. Among other things, it manufactures fume ducts and lines pickling acid vats for the plating industry. One new feature the company is plumping for: elimination of steel shells for these vats, since it has found that wood works just as well with polyethylene liners. One job of this type cost the customer $85 using wood and plastic instead of the quoted $169 for steel and plastic.

Other companies producing polyethylene pipe and fittings: Plax Corp. (Hartford, Conn.), Elmer E. Mills and Yardley Plastics (Columbus, Ohio).

Not Resistant: One expert also foresees a potential market of 100 million lbs. in the next decade for reinforced polyester pipe and structural shapes. However, they can be dismissed at least temporarily for use in the chemical industry. Several pipe installations have been made on an experimental scale and the simple truth is that the pipe does not resist chemical attack. In time this may be overcome, but for the immediate future the pipe makers will concentrate on the lucrative markets where chemical resistance is not a prime requisite.

EQUIPMENT . . . .

Lead-Clad Steel: Under a process developed by American Viscose and turned over to Knapp Mills for commercial exploitation, Knapp will start production next month of Ferrolum, lead-clad steel. The process is said to be the first fully-automatic one for producing lead-clad steel; the company expects to sell equipment about 10% cheaper than that produced by current methods. It envisions a big market for the material, particularly in equipment and construction materials for sulfuric acid production. Knapp will license the process, will also sell Ferrolum to other equipment manufacturers.

AGRICULTURAL SPRAYING: New opportunities for new herbicides.

Weed-Killing Wonders

Commercial-scale production of five new herbicides is in the offing. Goal: multi-million dollar market.

Selective weed killers for cotton and legumes offer biggest opportunities. Final testing will determine toxicity levels, treatment recommendations.

Weed killers, a large-volume agricultural specialty, are about to get some new stimulants.

Results are in on a handful of new compounds tested for use as selective weed killers. Limited production of some of them will be available for testing next year, and if things pan out, large-scale amounts will be produced for the 1953 season.

According to the USDA, which tested 20 new compounds on a variety of crops this summer, the most promising herbicide is 3-chloro isopropyl-N-phenyl carbamate.

Research on IPC (non-clorinated), began three years ago in England, was continued in this country. Only spotty results, however, were reported. It worked well in controlling grass in legumes on the West Coast and in alfalfa in the Southeast.

In attempting to improve results, a number of derivatives were synthesized. The chlorinated offshoot showed most promise.

When used as a pre-planting or pre-emergence spray, it gave excellent results in controlling grass weeds in cotton fields and in controlling chickweed in some legumes.

Application of any herbicide before planting or before a crop has begun to sprout is a somewhat tricky procedure. Many variations in performance can be caused by differences in the type of soil, amount of rainfall after application and the type of weed present in the infestation. Tests aren't as yet extensive enough to make recommendations for use under every variation of soil or climate where cotton and legumes are grown, but present results are encouraging.*

Small quantities of chloro-IPC have been produced by Columbia Southern and by U.S. Industrial Chemicals. Expansion, but not to full commercial scale, is planned for 1952.

While the chlorinated compound has been taking a major share of the bows, don't count normal IPC out of the picture. For it is less toxic to some crops than its derivative. In addition to U.S.I. and Columbia-Southern, J. T. Baker, Dow and American Chemical Paint have produced IPC.

Non-Selective Killer: Another chemical, which received first testing as a selective herbicide, will probably find more use as a non-selective plant killer. The compound is 3(p-chlorophenyl)-1, 1-dimethyl urea, tagged CMU by its DuPont developers.

At a rate of 1½ lbs./acre, CMU gives good control of weeds in cotton, corn and other crops, but if the dosage is accidentally increased to a 2½ lb. rate, both weeds and crop are killed.

For this reason, CMU is recommended for use only to completely kill vegetation on non-crop land. Limited production is planned for 1952, with testing for possible crop use slated to take a large part of this output.

At first glance, CMU would seem to be in direct competition with DuPont's Ammate killer. While CMU is more potent, it is used differently—for a complete kill in such places as railroad rights-of-way. Ammate (ammonium sulfamate) is a foliage spray which eliminates woody growths, but doesn't prevent a regrowth of grass. This is recommended for use on electric line rights-of-way where a grass cover is desirable.

Growth Regulator: Another derby entrant is maleic hydrazide, produced by U.S. Rubber's Naugatuck Division. While it shows some herbicidal properties, it probably will find a wider use as a material to regulate growth of grass.

Hydrazide was tested this summer on Connecticut's Merritt and Wilbur Cross parkways for its ability to keep grass from growing at its normal rate. On 12 plots of the landscaped dividing islands of the highway, the chemical reduced the number of required mowings from 19 to 2. In addition, hydrazide can be mixed with 2,4-D so that a single spraying will also rid grass of certain objectionable weeds.

As a herbicide, maleic hydrazide was effective in killing wild onion which had infested turf and pasture areas. This test was conducted in Mississippi.

In addition to these applications, it has been tested for use in preventing premature sprouting during grain storage.

No large scale production is as yet planned; that awaits results of next year's tests both as a regulator and as a herbicide.

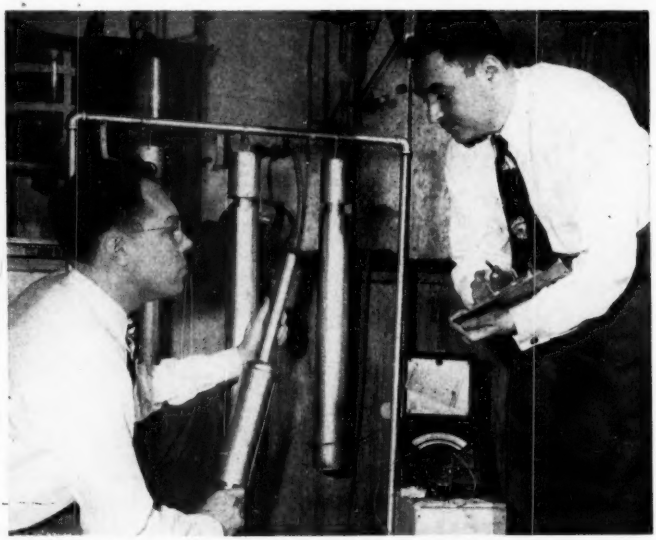
Carbide's Work: Sodium-2,4-dichlorophenoxyethyl sulfate—despite its name similarity, not a derivative of 2,4-D—is carbide's newcomer to the herbicide market. It can be used in killing small weeds sprouting in an established crop area.

* Chloro-IPC has not been effective, so far, in weed control in the North Central states—a major legume-producing area.

It is recommended for weed control in strawberries, a perennial plant. This compound is not effective on weeds over one inch high, as it effects the leaves, not root systems.

Carbide is also experimenting with dichloral urea, which is tentatively recommended as a killer of grass weeds in such broadleaf crops as cotton, sugar beets and rape.

Silicone-Alkyd Surge



Paint formulators, already highly enthusiastic about high-temperature stability, good weather and chemical resistance of silicone-alkyd copolymers, have something new to shout about this week: a 14-38% price reduction. And further development work on other silicone-alkyd combinations as well as increased production of copolymers promise new raw materials. Libbey-Owens-Ford Glass Co.'s Plaskon Division timed its price reduction just right to coincide with the Paint Industries Show at Atlantic City last week. One of the high points of the show, moreover, was Plaskon's booth with its display of the uses and abuses the silicone-alkyd resins can survive.

Paint formulators could see how the new resin coatings are being successfully applied to motors, exhaust systems, space heaters, outdoor signs, chemical and refinery plant equipment, lighting units, towers, bridges, and naval vessels.

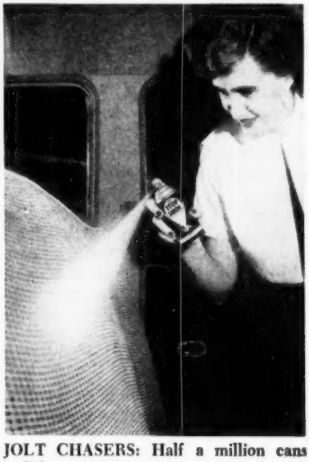
Plaskon's materials—ST-856, a baking enamel; ST-873, an air drying resin; and ST-881, a metallic pigment vehicle, also air drying—are its answer to industry objections to straight silicone resins. Straight silicones are high in price; have low solvent resistance, little thermoplasticity, and poor adhesion to steel; are incompatible with most organic film formers; and need a high curing temperature.

The silicone-alkyd copolymers, however, combine the best properties of the straight silicones and the alkyds. Based on the alkylchlorsilanes, a series of active, colorless, acrid-smelling liquids obtained when the H of trichlorsilane ($HSiCl_3$) is replaced by alkyl groups, the silicone-alkyd copolymers maintain a high gloss and stable color in the 400-500 F range. Some (the metallic pigment vehicles) do not fail even at temperatures as high as 1500 F. They resist weathering and chemical attack, and show excellent hardness and abrasion resistance without consequent loss in flexibility. And, important to assembly line users, they can be air dried or cured at production line speeds.

Head Man: Largely responsible for Plaskon's leadership in silicone-alkyd copolymers is Harold Hoppens, conservative, self-effacing director of the company's resin coating research. Under him, Plaskon is taking the lead in finding new uses, cutting down production costs, boosting volume and sales. If young Hoppens has his way, the company's pilot plant for basic silicones and silicone intermediates* will be parleyed into a full scale operation.

SILICONE-ALKYD COPOLYMERS: Plaskon's Hoppens (left) and coatings researcher Bernard Kress think the pilot plant will soon grow up.

Actually, Plaskon is the only company now producing the silicone-alkyd copolymers in quantity. Dow Corning prefers to make such formulations as the new DC Sylkyd 50, an intermediate designed specifically for preparation of the silicone-alkyd resins, and General Electric Co. is experimenting with a silicone resin that can be mixed directly with existing alkyd resins.

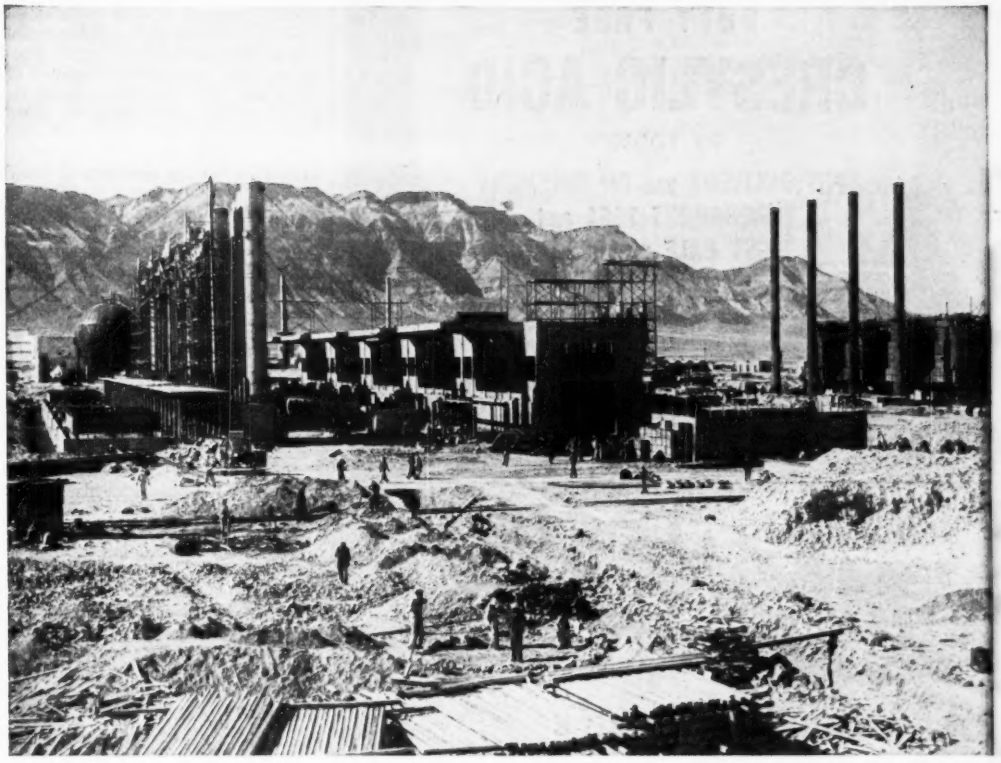


Plaskon people, however, think making the silicone-alkyd copolymers is the right approach, hope volume and sales will justify still another price reduction.

Shock Stoppers

Stop-Shok and Photo-Sweep are two new aerosol-dispensed anti-shock sprays just marketed in this country by Electro-Chemical Products Corp. (East Orange, N.J.) and abroad by Betterby, Inc. (New York City).

Stop-Shok is designed for the huge auto seat cover industry, and Photo-Sweep is a static-eliminating cleaning fluid for photographic film. Both products will be subjects for sales-surging promotion campaigns. One indication of the potential: Sales goal for Stop-Shok is a half million cans in '52.



On cool dry days, a person clad in a wool suit or fur coat, sliding in and out of an automobile, generates as much as 16,000 volts of static electricity on the plastic seat covers. This charge will remain 15 or 20 minutes or until discharged (painfully) by passenger contact with the door handle or other metal parts of the car.

JOLT CHASERS: Half a million cans in '52.

* Plaskon currently both buys from other silicone producers and makes its own.

MORE ABUNDANT HARVESTS FOR *Egypt*

CHEMICO-DESIGNED FERTILIZER PLANT UNDER CONSTRUCTION AT SUEZ, EGYPT.

In the land of the pyramids, thousands upon thousands of Egyptian farmers will reap richer harvests, thanks to the Chemico-built fertilizer works at Suez. This 550-ton-per-day plant and another much larger fertilizer factory, now in the planning stage, will be factors of enormous economic value in increasing the fertility of Egyptian soil. • Other important fertilizer projects are currently being erected in Mexico, India, Japan, the Philippine Islands, the United States and many other countries. These world-wide Chemico activities are the result of wide experience in the design and construction of complete fertilizer plants. Should your plans include the production of commercial fertilizers, it will pay you to consult Chemico.

SPECIALTIES . . . .

Stop-Shok ($1.98 for the 6-oz. can) is claimed to eliminate these jolts by bleeding off the static electricity almost as fast as it is formed. Sprayed and rubbed onto the seat covers, it forms a conductive chemical coating one micron thick.

Dust Defier: Similarly Photo-Sweep ($2.25 for 6-oz. can, $1.25 for a 3-oz. bottle) sprayed or otherwise applied to film and other photographic equipment, prevents build-up of static electricity and resulting accumulation of dust and lint. This means fewer retouch jobs on spotty prints, no "static trees." The carrier fluid for the anti-static compound in Photo-Sweep (hexane) has the advantage of being a cleaning agent as well.

Stop-Shok and Photo-Sweep are but two of a number of anti-static electricity compounds developed by Electro-Chemical Corp. President Robert G. Walcutt, close-mouthed about the company's formulas, says that they are not detergents which are the bases of many formulations, nor fatty acid amines or their salts. He describes them as complex inorganic chemical compounds placed in such carriers as Deobase, methyl alcohol, isopropanol, or carbon tetrachloride.

In any event, Electro-Chemical has additional compounds in the works, hopes soon to market a static electricity eliminator for use in laundry rinses to keep nylon and other synthetic materials charge-free, and another to keep static electricity off rugs. Still a third compound is planned to prevent what airmen refer to as St. Elmo's fire—a discharge of static electricity at the wing tips which can be severely damaging to a plane's metal surfaces.

•

Dishwashing Compounds: Pen-Glo and Pen-Gleam are the trade names of Pennsylvania Salt Manufacturing Co.'s latest products for industrial and institutional dishwashing. The former is designed for mechanical dishwashers; the latter, for hand dishwashing. Both are sold in powdered form, Pen-Glo in 250-lb. drums and Pen-Gleam in 125-lb. drums and in case lots of six 10-lb. cans.

•

Flat White Enamel: After four years of field testing and trial marketing, Du Pont is now placing on general sale a true flat white enamel called Dulux Super-White Flat Enamel. Its principal virtue is that it combines the soft decorative appearance of a flat paint with the hardness and durability of enamel.

•

Eskimo Push: Monsanto Chemical,

encouraged by a survey among Greater Boston motorists that showed its Eskimo anti-freeze to be among the top three of 18 brands recognized and accepted by those interviewed, will be aiming for tripled sales volume for the product (both permanent and alcohol-type) in the 1951-1952 season. The company is increasing the number of New England distributors of the line, which was introduced about a year ago.

•

Acrylic Emulsions: Two new stable copolymer dispersions of higher acrylic esters, called Polyco 434 and Polyco 435, have been developed by American Polymer Corp. (Peabody, Mass.). Dry films of these products are said to be flexible, water-clear, non-oxidizable; have moderate to considerable tack and desirable ageing properties. They can be used for adhesives, binders and saturants.

•

Naco Fire: The Fort Pierce, Fla., fertilizer plant of Naco Fertilizer Co., recently enlarged and modernized, has just been destroyed by fire. Building and equipment were valued at an estimated $200,000, but there was also a heavy loss of materials of unestimated value.

•

New N.C. Companies: Aspen Associates, Inc., Greensboro, N.C., has just been chartered to deal in supplies for finishing and cleansing. Authorized capital stock is $200,000; subscribed stock, $300.

W. R. Peele Co., Inc., Clayton, N.C., has been organized with capital stock of $500,000 to deal in drug products.

•

Drug Trade Trypsin: Tryptar, Armour Labs' brand of trypsin, previously available only to hospitals, has been released for general distribution to the drug trade. It is a proteolytic enzyme which in highly purified form digests only dead tissue without affecting live tissue.

•

Carbon Paper Wax: A carnauba substitute designed especially for use in carbon paper manufacture, has been developed by Concord Chemical Co. (Moorestown,N. J.). Main selling point of the new product, trade-named Parwax, is its low cost.

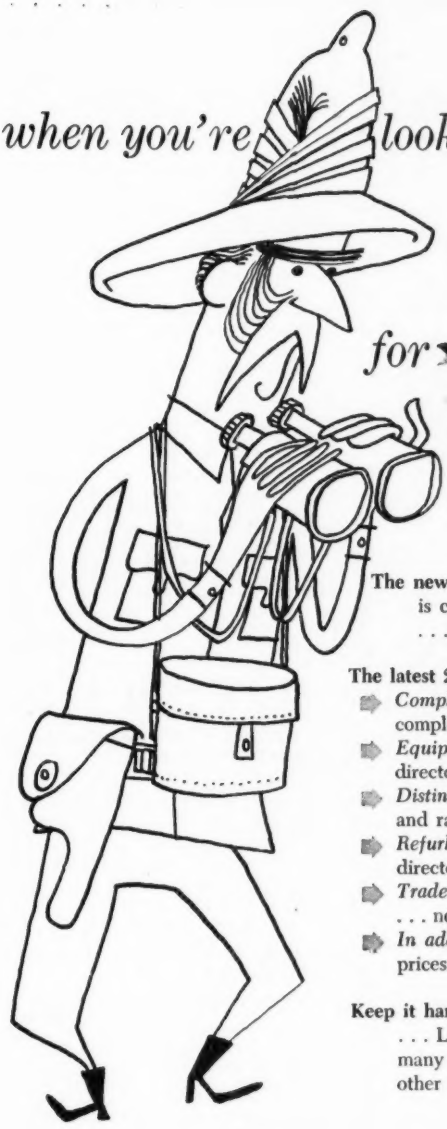
BOOKS.....

Human Relations in Supervision, by Willard E. Parker and Robert W. Kleemeier. McGraw-Hill Book Co., Inc., New York, N.Y.; vii+472 pp., $4.50.

Directed to the first-line supervisor—whether foreman or office manager—this volume is concerned with the human factor in business and industry. In emphasizing the role and significance of the supervisor in dealing with the human relations aspects of his job, the authors apply the findings of modern psychology to problems of training, motivation, frustration, and discipline. The volume presents modern management principles and goes on to treat the best practices in hiring, inducting, evaluating and counseling the worker, with stress placed on nondirective counseling as a valuable tool to the supervisor when handled effectively. Discussion questions follow each chapter.



Elements of Plant Protection, by Louis Pyenson. John Wiley & Sons, New York, N.Y.; 538 pp., $4.96.

A study of plant pests—insects, disease-producing organisms, rodents, birds and weeds—and their control is the subject of this volume. Concerned with the nature of plant pests, the author discusses the structure and development of injurious insects, the characteristics of mammals and birds, the causes of plant diseases, and the extent of weed damage. And along with these discussions, there is a practical explanation of the modern means for combating damage of this type through the use of insecticides, herbicides, soil pasteurization and other chemical and natural methods. The author also describes equipment used for plant protection, with reference to their proper selection and maintenance.

Principles of Weed Control, by G. Ahlgren, G. Klingman, and D. Wolf. John Wiley & Sons, Inc., New York, N.Y.; vii+368 pp., $5.50.

This book tackles the problem of weed control, giving attention to all its aspects—the weeds themselves, crops, cultural techniques, chemicals, and weed-seed habits and responses. The authors stress the scientific control of weeds by means of specialized techniques involving applied chemistry and plant physiology; the principal control chemicals with particular emphasis on 2,4-D are discussed with sufficient chemical explanation being given to permit interpretation of data. Other topics covered here include the effects of herbicides on plants, poisonous weeds and their control, soil

The new, 1951-52 BUYERS' GUIDE ISSUE of CHEMICAL WEEK is coming off the press this month . . .
. . . issued to all CHEMICAL WEEK subscribers

The latest 27th Annual Edition of the GUIDE contains:

- *Completely revised listings* verified by a 35-page questionnaire completed by all firms listed.
- *Equipment listings,* in addition to chemical materials, to make this directory the most comprehensive in the industry.
- *Distinction between producers vs. non-producers,* for all chemicals and raw materials.
- *Refurbished Equipment included* in a separate section of the directory.
- *Trade Name listings* are shown with the "owners" of brands only . . . no jobbers listings.
- *In addition:* an index to advertisers, telephone numbers, chemical prices, associations, societies, and technical data.

Keep it handy on your desk for an at-hand reference . . .
. . . Let THE BUYERS' GUIDE Work for You . . . to answer your many problems on sources of supply, availability, and the host of other data every chemical businessman needs to know.

DRYMET*

ANHYDROUS SODIUM METASILICATE

A granular, free-flowing alkali with the following properties:

Formula	Na_2SiO_3
Molecular weight	122.06
Melting point	1088°C
Na_2O	51%
pH in a 1% solution	12.75

Quickly and completely soluble in water up to a concentration of 35%

DRYMET is the most highly concentrated form of metasilicate available because it contains no water of crystallization. Unique among alkalies—it combines strength with buffering action which prevents abrupt changes in pH. If you use alkali—investigate the advantages of DRYMET.

sterilants, etc. The volume has been written primarily as a text book.

Organic Syntheses, Vol. 31., chief editor, R. S. Schreiber. John Wiley & Sons, Inc., New York, N.Y., vi+ 122 pp., $2.75.

Like its predecessors, this 1951 edition presents satisfactory methods for preparing organic chemicals. Details of all procedure steps are included as well as commentary-notes, and additional information on the range of yields, melting points, boiling-points, refractive index, etc. Preparations are arranged in alphabetical order according to common names of compounds. This volume includes 40 new syntheses along with bibliographical notes on them.

Briefly Listed

SELLING THE UNITED STATES MARKET, by Gustav E. Larson and Marshall N. Poteat, 144-p. guidebook specifically designed to aid the newer and smaller manufacturer, gives information on distribution facilities and methods, the development of a good product and the finding of U.S. markets for it; 15 case studies are included. From Department of Commerce field offices or from the Government Printing Office, Washington, D. C., $1.

PROBLEM...

. . . to help the rubber industry perfect low temperature polymers and accelerate their commercial production for automobiles and truck tires.

SOLUTION...

. . . a new synthetic rubber catalyst, Para-Menthane Hydroperoxide—which shows exceptionally high polymerization activity and has been found particularly satisfactory for production of synthetic cold rubbers of the GR-S-100 type. Hercules* Para-Menthane Hydroperoxide (PMHP) also shows promise as a catalyst for the emulsion polymerization of other monomers such as acrylonitrile, methyl methacrylate, vinyl acetate, and vinyl chloride.

Cold Rubber Catalyst

RESULT...

. . . tougher, longer-wearing rubber that can be economically produced in quantity from readily available materials. Not only tires, but many other civilian and defense products are prospects for cold rubber. This successful synthetic owes its rapid growth largely to the catalysts which were ready when needed.

Other commercial grade hydroperoxides produced by Hercules and used as polymerization catalysts include Hercules* Cumene Hydroperoxide (CHP) and Hercules* Diisopropylbenzene Hydroperoxide (DIBHP). Many other Hercules chemical materials have helped in the development of synthetic rubbers and in improvements of natural rubber products, too. These include emulsifiers, reclaiming agents, numerous rosins and synthetic resins, casein, and purified cotton linters as a base for tougher tire cords. Hercules welcomes the opportunity of placing its long experience in rubber and associated chemical materials at your disposal.

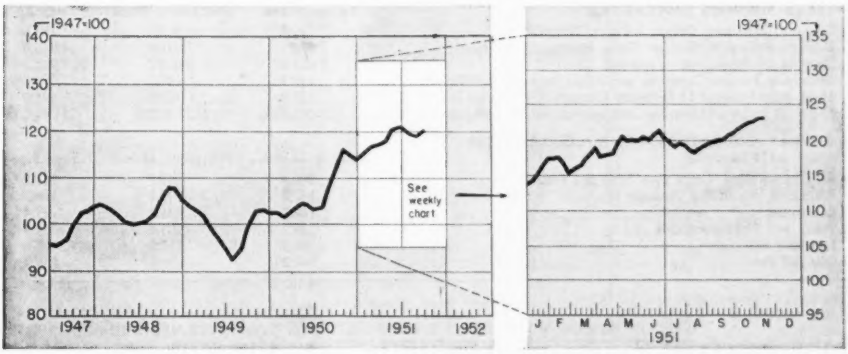
CMC Improves Paperboard

Hercules® CMC, purified cellulose gum, is being used effectively and efficiently by the paperboard industry for calender stack water box treatment. CMC produces resistance to penetration by oils, greases, and waxes; improves surface strength and prevents scuff resistance and fuzz difficulties; and improves mullen and tensile strength. Board treated at the calender stack with CMC may be given a densometer reading 20 times and a decrease in oil penetration rate of 10 times that obtained with water only. For waxing grades such a treatment may reduce wax consumption by 30 to 35% and give a superior print job. Very worthwhile ink savings and improved press operations are possible with CMC-treated board.

New Uses for HEC

The newest use found for Natrosol® Hercules hydroxyethyl cellulose is to aid the coagulation of agents used in water purification; HEC promotes fast settling of alum flocs, and improves clarity of the water. HEC is also suitable as a starch replacement in flotation, a permanent size in textiles. Other possible applications include textile printing media, inks, leather coatings. Two viscosity types are available. Natrosol, Hercules hydroxyethyl cellulose is an alkali-soluble, water-insoluble cellulose ether of good film-forming properties. Density 1.49 gm/cc and refractive index 1.534, in film form, at 25°C. Natrosol, Hercules hydroxyethyl cellulose is a white, tasteless, odorless, fibrous solid, insoluble in all common organic solvents, oils, fats, and greases, soluble in alkalies—e.g. 2% to 18% NaOH.

For Next Summer's Flies



Thanite® will take care of them! Developed by Hercules, this terpene thiocyanoacetate makes insecticide sprays that have a fast effective kill, cost little to produce. Only three gallons of Thanite in 97 gallons of base oil produce a spray that grades AA by the official Peet-Grady method; even 1% Thanite gives knock-down punch to a 5% DDT residual spray.

Visit the Hercules exhibit, 7W, at the *TWENTY-THIRD EXPOSITION OF CHEMICAL INDUSTRIES*, Grand Central Palace, New York 17, N. Y., November 26 to December 1, 1951.

CW Index of Chemical Output—Basis: Total Man-Hours Worked in Selected Chemical Industries

Biggest market news of the week is the action by the Office of Price Stabilization to scrap the general price ceilings for chemicals. Instead, all producers who haven't already done so will have to file under the Manufacturer's Regulation CPR-22. But there will be some exceptions if specific groups within the industry can persuade OPS to issue a custom-made price edict.

Most of the major chemical producers have been under CPR-22 since October. Generally speaking, they haven't fully recovered yet. After the reams of reckoning, many found that the majority of their prices could be raised little if at all. Reason: keener competition for the buyer's dollar in the face of greater supplies, smaller demand.

A few cases of price relief by CPR-22 are worth noting. For instance, phenol and styrene have each been raised some 1-2¢ a pound by Dow Chemical and Monsanto Chemical, biggest factors for these products. Current prices are now about 21¢ a pound for the styrene monomer (freight equalized); and about 19½¢ a pound for phenol (freight allowed).

The market for both these plastics raw materials is strong, and there is little doubt that the higher prices will be retained in the foreseeable future. Both Monsanto and Dow, squeezed especially hard by rising benzene costs, had been unable to pass along the increase until last month.

Echoes of the rise in phenol prices can be heard in the committee rooms of the OPS. This week, members of the phenol-aldehyde resin advisory group cited the higher phenol cost as the basis of their economic plaint. Their plea: an OPS-tailored price regulation to reflect their heavier expense.

About half of the industry has been under CPR-22, the other half under GCPR. Under the latest OPS decision, the entire industry must go under CPR-22 by December 19—unless OPS grants this request.

One dilemma yet to be resolved: Molders who have to buy their phenol are harder-pressed than integrated producers, but still fear that too-restrictive pricing might scare off their suppliers.

WEEKLY BUSINESS INDICATORS	Latest Week	Preceding Week	Year Ago
Chemical Industries Output Index (1947=100)	122.5	123.0	115.5
Bituminous Coal Production (Daily Average, 1000 Tons)	1,886.0	1,928.0	1,923.0
Steel Ingot Production (Thousand Tons)	2,021.0	2,019.0	1,980.8
Wholesale Prices—Chemicals and Allied Products (1926=100)	140.7	140.7	133.7
Stock Price Index of 14 Chemical Companies (Standard & Poor's Corp.)	221.9	230.6	191.0
Chemical Process Industries Construction Awards (Eng. News-Record)	$15,165,000	$32,748,000	$5,044,000

MONTHLY INDICATORS — WHOLESALE PRICES (1926=100)	Latest Month	Preceding Month	Year Ago
All Commodities (Other than Farm and Foods)	166.9	167.2	159.2
Chemicals and Allied Products	140.8	140.1	128.7
Chemicals	144.7	144.4	125.4
Drugs and Pharmaceuticals	184.1	184.6	153.4
Fertilizer Materials	118.5	117.8	111.4
Oils and Fats	141.9	139.8	163.9

Styrene prices' going up is a sure sign that producers are bullish on long-term prospects. During the next month, however, supplies should be ample. Reason: Seasonal business has tapered off. Any slack will soon be taken up by larger defense needs and fuller-scale development of many small uses into big ones. Stellar prospect: synthetic latices.

Vinyl plastics sales haven't been active enough to warrant price increases. But a substantial pickup can be expected before long. Part of this optimism is based on the belief that the textile market can't stay dead. And vinyls should play a headline role in the structural plastics boom, now in the ground-swell stage.

Polyethylene is another strong contender for the structural plastics business. Supply has been far short of demand because of the military's unsated craving. Luckily for molders, new production will come in shortly. And though the military will be persistent as ever, the percentage for civilian users will rise during the next year.

Here are but a few recent examples to show how outlets for structural plastics are shaping up: The Air Force wants them for disposable Jelly bomb tanks; the Coast Guard, for channel buoys. And a company in the Midwest now uses plastic piping to replace copper in homes.

But trying to assess military business is risky as some chemical producers have been finding out. Even when the volume of business is known, the timing often goes askew. Resorcinol makers will testify to that: Three of them, largely on Pentagon assurances, have been expanding output. To date only about 15% of this defense buying has materialized, and producers may soon have to scout for additional markets.

Yet, the National Production Authority continues to list resorcinol in short supply. On formaldehyde, NPA, reporting a supply-demand balance, is much closer to the mark.

One major producer, despite higher costs, now quotes a 3% lower figure than a month ago. Causes of demand laxness: slowdown of defense buying, apathy in textiles.

SELECTED CHEMICAL MARKET PRICE CHANGES — Week Ending November 11, 1951

	Change	New Price		Change	New Price
UP					
Ouricury wax, bags, ref.	$ .01	$ .87			
DOWN					
Casein, dom., over 5 tons	.01	.37	Copra, Pacific ports, ton	$10.00	$170.00

All prices per pound unless quantity is stated

Prices Only a Mite More

By the end of the year, the Office of Price Stabilization will remove all chemical manufacturers from general price ceilings.

Most chemical companies have voluntarily filed under Regulation CPR-22; others are still hoping for tailor-made pricing.

But competition among major producers has curbed price boosts sought under CPR-22.

Before the end of the year, the Office of Price Stabilization will try to abandon general price ceilings for chemical manufacturers. That's the nub of its price control edict issued this week.

On December 19, filing under Manufacturers' Regulation CPR-22 will become mandatory except for some special cases of tailor-made controls. Therefore, many who have preferred the comparative peace and quiet of the general price freeze in effect since January, will have to bestir themselves to comply with the latest in the long succession of OPS rulings.

Not all chemical companies will be faced with the tedious and intricate calculations needed to file under CPR-22 Most of them, including practically all the majors, already have filed CPR-22 prices for their products. And, "without exaggeration, the calculations," in the words of one sales manager, "took weeks and weeks and weeks."

Limited Relief: These companies have been hoping to get out from under some of the inequities of the original general freeze (GCPR). Those who had not raised prices fast enough or early enough were caught in the squeeze induced by rising costs of raw materials and labor. And CPR-22, which allows them to raise prices to compensate for at least part of these increased expenses, seemed like the only feasible escape route.

But most companies admit privately that the outcome has been somewhat short of satisfactory. Reason: Supplies of chemicals are much improved, demand is not what it could be, and competition is proving more effective than price ceilings in keeping prices down. Market conditions made higher prices allowable under CPR-22 provisions a fond hope in many cases; they had to meet competition.

How It Works: Electing to price under CPR-22 has been a Rubicon-crossing proposition for the regulation must be applied "across the board." Some prices fall below GCPR levels; others are increased. It takes a lot of figuring to find out whether there is an overall gain or loss. And then the gains may be only theoretical if buyers shy at the higher prices.

Each company may end up with a different price for the same commodity. This has caused considerable confusion in chemical marketing and purchasing. And companies, not sure where their competitors stand CPR-22—pricewise, have been reluctant to disclose details of price changes.

However, CW has been able to uncover quite a bit of information on how CPR-22 has affected the chemical industry thus far. For instance, E. I. du Pont de Nemours applies CPR-22 to eight of its ten divisions. Increases in most cases have been well under what CPR-22 would permit. Decreases were almost as numerous.

In the Polychemicals Department prices were advanced on 25% of the products; the others either remained the same or were lowered. Lucite (methyl methacrylate) and Allethon (polyethylene), to take these plastics as examples, have gone up by some 2% since the October 1 CPR-22 filing date. In the Electrochemicals Department, the effect of all price changes was a net decrease of 0.6%, with formaldehyde down 3%. Other departments also showed a net decrease.

At Union Carbide and Carbon, both the Carbide and Carbon Chemicals and Bakelite Divisions braved CPR-22 in October. Some results: The Chemicals Division reduced its price of isopropyl alcohol by 2¢ a pound, and raised the price of acetic acid by the same amount. Bakelite's price on polyethylene rose 3¢ to 49¢ a pound, the same as DuPont's. Vinyls were unchanged, as a softer market made the permitted boost inadvisable.

Dow Chemical, American Cyanamid, and Monsanto have each filed under CPR-22, but are not particularly anxious to talk until they get their bearings in the new market. Dow and Monsanto have both increased prices on styrene and phenol, an indication of the higher benzene prices.

LITHIUM has arrived...

AND METALLOY IS BASIC TO THIS FAST-GROWING INDUSTRY!

Supplier Of Lithium In These Forms:
LITHIUM METAL
Cup . . . 1/5 lb. Shot . . . 4-8 mesh
Extruded Rod . . . . . ½" & ⅛" Dia.
Wire . . . . ⅛" Dia. . . . . Ribbon ¼"
Cartridge (Encased in Copper Tubing) . . . . . 2.25, 4.50, 9.0 & 108.0 Gram
LITHIUM HYDRIDE—Fine Ground
Supplied experimentally or commercially . . .

LITHIUM
- Carbonate
- Chloride
- Fluoride
- Hydroxide Monohydrate
- Nitrate
- Sulphate

Deferred Payment: Within the next six weeks, most chemical companies will have gone over to CPR-22, whatever their original plans on pricing may have been. But a comparative handful will be able to price under tailor-made regulations. Agricultural chemicals, anti-freeze, and a few other categories now are handled that way. And as OPS gets its second wind, more of these regulations for special groups within the chemical industry are slated to come in.

But tailor-made or CPR-22 notwithstanding, old-fashioned competition will have a bigger part in calling the price tune.

Import Assist

Large chemical companies have the men and money to handle their own imports, but small organizations are often at a loss to locate raw materials from overseas. That's why the little fellows are turning in greater numbers to a busy port's "importers' aid"—New Orleans' International House. What's more, the service is free, and without obligation.

There is a definite business angle to the service: If imports and exports are stimulated, the port of New Orleans will get some of the volume. Hence, shippers, steamship companies and railroads operating there feel the $50 to $250 each contributes to International House's yearly upkeep is definitely worthwhile.

The organization had its start as an export promoter—finding overseas markets for U.S. goods. Realizing that trade must be mutual, it soon took the logical step of adding an advisory service on imports. The man whose business it is to locate scarce-in-the-States chemicals for domestic manufacturers is George Sawicki, International House's assistant director.

Service Example: Sawicki once was asked to recommend sources of an essential oil produced in Spain. His files listed 150 prospective suppliers—but he had no assurance that any of them could currently ship the item. He sent a letter to each company, asking whether it had stocks on hand. From the 15 favorable replies received, the manufacturer was easily able to select a source.

Like any service of International House, this cost the buyer nothing. Even the expenses of typing and air-mailing 150 individual letters were borne by Sawicki's office.

Contacts are maintained with over 25,000 foreign firms which want to sell to American customers. "Just name your need," Sawicki comments, "and we're sure to have it."

Foreign Offers: His list of different chemicals available from abroad reads like a comprehensive catalog. Japanese sources, for example, will supply such items as acetic acid, ammonia, caustic soda, calcium carbide, chlorine, silicon carbide, sulfuric acid and vinyl chloride.

Listings from Sweden include white arsenic, fatty acids, naphthalene and tricresyl phosphate. Some Italian producers are looking for markets for various alcohols, barium sulfite, caustic soda and zinc dust.

Many domestic manufacturers have opposed imports, but Sawicki takes the opposite view. He points out that unless the U.S. continues to import what materials it can, it will have to keep on "loaning" dollars so that other countries can buy American products. "Importing," he emphasizes, "will help—not hurt—the domestic economy."

Arguments on this point are largely academic to small manufacturers hard-pressed to find sources of raw materials. They have been turning for help to the trade-wise experts of New Orleans' International House.

Potash Plum

While it won't solve all potash supply problems, a new Saskatchewan, Canada, deposit will soon be helping to satiate some of the demands for potassium salts.

The field, located near Vera, Sask., has been rated by engineers and geologists as one of the largest potassium salt fields in the world, exceeded only by Carlsbad, Strassfurt and Russian deposits.

Western Potash Corp. is now working the field on an experimental scale, and hopes to go to large-scale production in the near future. Present work is being carried out on a 3,450 foot-deep salt bed, in which potassium chloride is present in a wide band near the top of the deposit. Approximately one-third of the band is potassium chloride.

Production Reserves: Total resources of the Vera bed have not yet been estimated. The field is at least 12 miles deep, but the breadth of the deep deposits has not yet been measured.

If the richness of the presently explored deposits holds out, a square mile, 10 feet thick, would provide 6½ million tons of potassium chloride—in itself better than three times present yearly U.S. consumption.

While the immediate supply situation won't be affected, production from Saskatchewan will be a definite future market factor.

WANTED AT ONCE

A nationally known and established explosives manufacturer operating an explosives plant, has the following positions open for those who are qualified:

ASST. PRODUCTION MANAGER

Five to ten years experience as Superintendent or Asst. Production Manager. Acid or explosives operations. General experience in chemical industry would be considered. Degree in chemistry or engineering required.

CHIEF PROCESS ENGINEER

Degree in chemistry or engineering, plus five to ten years experience required. Research, development, production, cost reduction, and process improvement.

DEVELOPMENT ENGINEER

Degree in chemistry, plus three to five years experience required. Research, development, cost reduction, process improvement.

CHEMISTS

Chemistry B. S. degree; minimum one year analytical experience.

Attractive salaries and good working conditions.

Fair and equitable company policies.

HOW TO USE COUPON

Circle page numbers of items about which you want more details. Then write your name and address on the coupon at the bottom of the page and mail it to us. Your request will be forwarded to companies concerned, the answer coming direct to you.

MAKES IT HANDY

Products and literature in this issue are listed on these pages. There are three indexes. (1) Editorial items on new products, new equipment, new literature; (2) products advertised. (3) The index of advertisers is on the following page.

THE NUMBERS

Advertisements:—There is a page number on the coupon for each advertisement. Before the number, may appear, L, R, T, B (left, right, top, bottom), locating the ad on the page; small letters following (a,b,c) indicate additional products in the advertisement.

Editorial Items:—Numerals are page numbers; the ABC's distinguish among items where more than one is on a page. There is a number on the coupon for each item referring to new products, equipment, and literature.

BOOKLETS . . . .

Chemicals

Styrene Monomer

36-p. technical bulletin giving detailed information on the properties, chemical reactivity, commercial handling, and uses of firm's styrene monomer, an aromatic hydrocarbon which has been utilized in large quantities for the manufacture of polystyrene plastics and for the manufacture of GR-S type synthetic rubber. It is also finding application in the manufacture of polystyrene-containing resins and numerous other organic compounds. Koppers Co., Inc.

Rubber-Process Aid

Booklet containing physical data and other information on "Sundex-41," a new process aid for cold rubber designed to prevent scorching during mixing, milling, and extruding and also intended as an aid in the dispersion of compounding ingredients. Sun Oil Co.

Plasticizer

Technical data sheets dealing with "Santicizer 8" (mixture of N-ethyl ortho and para toluene sulfonamides) covers its chemical and physical properties, starting formulas, and uses; discusses compound as a plasticizer for certain coatings, adhesives and molding compounds. Monsanto Chemical Co.

Equipment

Coal Handling Equipment

40-p. pictorial review of the functional applications of the firm's coal handling equipment in the power plant. The various sections cover unloading equipment, coal storage and reclaiming equipment, crushers, transportation and distribution and auxiliary equipment. Link Belt Co.

Valves

170-p. loose-leaf manual, a revised edition, compares valves of 18 leading manufacturers by material, type, pressure rating, and structural variations—for engineers, purchasing agents, and others who must specify valves or check specifications of others. This edition also shows sizes for cast iron and bronze valves. Equivalent Valves Co.

Fire Extinguishers

32-p. booklet entitled, "Correct Fire Protection" intended as a guide for operators of fire extinguishing equipment in selecting the correct fire extinguisher for use on the kind of fire in question; booklet describes and illustrates the various sizes of units available for use with the different kinds of fire extinguishing agents. American-LaFrance-Foamite Corp.

Temperature and Pressure Controllers

4-p. folder describing firm's self operated temperature and pressure controllers. The temperature controllers are used on hot water storage heaters, tanks, canning retorts, exhaust boxes, textile dryers, and scouring bowls. Specifications are included for both types of controllers. Taglibue Instruments Div., Weston Electrical Instrument Corp.

General

Radioactivity

108-p. catalog providing information on the company's radioactivity equipment, chemicals tagged with radioisotopes, and consulting services. Tracerlab, Inc.

Pension Plans

12-p. booklet discussing essential features of pension plans and profit sharing retirement trusts. Drexel & Co.

SPECIFY RCI...

The resin line which gives you the formulating leeway you need

No matter what synthetic resins your paint formulations call for, chances are you'll find RCI your best source of supply. For Reichhold resins constitute the broadest, most complete line to be found anywhere in the industry. RCI's unique production talents and long experience in working with a large variety of basic ingredients make it possible to supply you with a wide range of top-quality resins in three or four grades from which you can make your selection . . . with an eye on both performance and price. But why not find out for yourself? For further information write the RCI Sales Department at Detroit or contact your nearest RCI representative—at your service from coast to coast.

MALEIC ESTERS

as . . PLASTICIZERS

AND . . as

INTERMEDIATES

FOR

RESINS

SURFACE-ACTIVE AGENTS

RUBBER CHEMICALS

TEXTILE SPECIALTIES

RESINS that range from soft and flexible to hard and brittle materials can be produced by copolymerizing maleic esters with vinyl chloride, vinyl acetate, acrylonitrile, vinylidene chloride, or isopropenyl acetate. Maleic ester resins can be made for:

- plastic films and sheets
- electrical insulation
- molding compounds
- binders
- coatings
- impregnating compounds

PLASTICIZERS: Maleic esters of higher alcohols are of interest as plasticizers for use with vinyl resins and cellulose esters.

SURFACE-ACTIVE AGENTS: Sodium bisulfite added to the double bond of higher alkyl maleates yields valuable surface-active agents.

For further information or samples, call or write the nearest Carbide and Carbon Chemicals office *today*. Ask for the technical bulletin "Maleic Esters," Form-7354. Inquiries for other esters of maleic, succinic, and fumaric acids are invited. Samples of many of these esters are available.

	DIETHYL MALEATE	DIBUTYL MALEATE	DI(2-ETHYLHEXYL) MALEATE

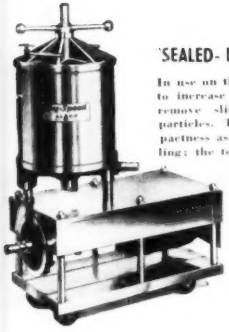
A McGRAW-HILL PUBLICATION



ALSOP Liquid Processing Equipment

FOR THE CHEMICAL & ALLIED INDUSTRIES

For dependable, low-cost PERFORMANCE

We offer a whole complete line of Filters, Mixers, Tanks, and Pumps designed and manufactured to exacting standards and of the finest materials. We also offer the diversity and completeness of our experience in Agitation and Filtration Engineering and we are prepared to design semi-standard units which might be required to fit your specific job. Let us help you with your Mixing and Filtering operations. Call on us for specific and complete information on any unit, no obligation of course. Write for a copy of our New Liquid Processing Equipment Catalogue.

"SEALED-DISC" ALL PURPOSE FILTERS

In use on thousands of different liquid products to increase purity, clarity, and brilliance or to remove slime, cloud, sludge, and undesirable particles. Their simplicity, portability and compactness assures convenience and speed in handling; the totally inclosed principle insures leakproof, drip-proof operation. The Asbestos Filter Discs are available in eight different grades providing the right degree of filtration your product may require. Complete Units with Pump and Motor or as Filter Units only are available in Stainless Steel, Monel Metal, Iron, Steel, or Brass and Bronze, in a wide range of sizes.

"DISC-PAK" FILTERS FOR OILS AND WATER

Designed for all industrial oils, solvents and water. Using Asbestos Discs assembled in cartridge form, the "Disc-Pak" Filter completely removes dirt, rust, moisture, sludge, and all impurities. The Asbestos Disc Cartridges are made in eight different grades of porosity from coarse or fast flowing to finer grades that remove all impurities. "Disc-Pak" Filters are designed to hold from one to six Disc Cartridges offering a complete range of sizes or capacities up to 3600 g.p.h. Available in Brass and Bronze, or Stainless Steel with mounting bracket for stationary installation to pipe lines and tanks, or complete with suitable motor and pump mounted on a portable stand.

MIXERS FOR ALL LIQUIDS

We offer a full line of Portable Mixers in sizes from 1/10 H.P. up to 5 H.P. for uniform blending, dissolving and mixing. Equipped with our all-way adjustable clamp for speed and ease in positioning the shaft and propellers for the best mixing action. These portable, easy-to-operate Mixers make any open container a Mixing Tank. The two propellers are movable on the full length of the solid acid-resistant shaft allowing proper adjustment to conform with the batch depth. Standard shafts and propellers can be supplied of Stainless Steel, Monel Metal, Nickel, Aluminum, Bronze, Steel or Special Alloys.

MIXING AND STORAGE TANKS

We offer a complete line of sturdy 16 gauge Stainless Steel Open and Closed (non-pressure) Tanks in sizes from five to three hundred gallons capacity. The all welded construction, rounded corners, and the highly polished, crevice-free surfaces make them easy to clean and to keep sanitary. All Open Tanks can be supplied with a suitable Mixer, Covers, Valves, and Faucets of various types as complete Mixing Units. We can supply Closed Tanks (non-pressure type) in all sizes complete with either Top or Side Entering Mixing Unit Assemblies. The Specially designed sloping bottom insures complete and fast draining.

Chemical Week (including Chemical Specialties, and Chemical Industries) is published weekly by McGraw-Hill Publishing Company, Inc., James H. McGraw (1860-1948), Founder. **Publication Office: 1309 Noble St., Philadelphia 23, Pa.**

Executive, Editorial and Advertising Offices: McGraw-Hill Building, 330 W. 42nd St., New York 36, N. Y. Curtis W. McGraw, President; Willard Chevalier, Executive Vice-President; Joseph A. Gerardi, Vice-President and Treasurer; John J. Cooke, Secretary; Paul Montgomery, Senior Vice-President, Publications Division; Ralph B. Smith, Editorial Director; Nelson Bond, Vice-President and Director of Advertising; J. E. Blackburn, Jr., Vice-President and Director of Circulation.

Subscriptions to Chemical Week are solicited in the chemical and process industries only from management men responsible for corporate affairs, purchasing, sales, marketing, packaging, research or chemical functions. Position and company connection must be indicated on subscription order. Address all subscription communications to J. E. Blackburn, Jr., Director of Circulation. Allow ten days for change of address.

Single copies $2.50. Subscription rates—United States and Possessions $5.00 a year; $8.00 for two years; $10.00 for three years. Canada $6.00 a year; $10.00 for two years; $12.00 for three years. Pan American countries $15.00 a year; $25.00 for two years; $30.00 for three years. All other countries $25.00 a year; $40.00 for two years; $50.00 for three years. Entered as second class matter April 5, 1951, at the Post Office at Philadelphia 23, Pa., under the Act of March 3, 1879. Printed in U.S.A. Copyright 1951 by McGraw-Hill Publishing Co., Inc.—All Rights Reserved.

Chemical Week Buyers' Guide Issue

McGRAW-HILL PUBLISHING COMPANY 330 WEST 42nd STREET, NEW YORK 36, N. Y.

Dear Subscriber:

This is your copy of the *new* Chemical Week Buyers' Guide, and here is what we mean by *new:*

To save you time, to make the Guide more useful to you, we have . . .

- Completely revised and reset all product listings.
- Used modern, legible type faces,
- Changed page design to the popular three-column make-up,
- Combined Chemicals, Raw Materials and Chemical Specialties into one completely alphabetized, simpler-to-use section.

This year the Buyers' Guide includes the following sections:

Chemical Company Directory (page 3)

Geographical listing of names and addresses of suppliers of chemicals, raw materials and specialties in the United States.

Chemicals, Raw Materials and Specialties (page 41)

A comprehensive list of chemical products including formulas, properties, uses and suppliers.

Chemical Prices (page 555)

Range of Quotations 1939 to 1950 of Heavy Industrial Chemicals; Coaltar Chemicals; Dyestuffs, Tanstuffs, Textile and Leather Chemicals; Oils, Fats and Waxes; Fertilizer Materials; Paint, Varnish and Lacquer Materials; Drugs and Fine Chemicals; Botanical Drugs, Spices and Gums; Essential Oils and Aromatic Chemicals; Petroleum Products.

Technical Data (page 558)

A selection of conversion tables which provide a ready reference for frequently needed technical information.

Associations and Societies (page 561)

An all-inclusive list of trade, technical and scientific organizations in the chemical process field.

Equipment, Containers and Supplies Company Directory (page 563)

An alphabetical list of manufacturers of equipment, containers and supplies used in the chemical process field.

Equipment, Containers and Supplies (page 573)

A comprehensive list of equipment, containers and supplies used in the chemical and process industries, together with their manufacturers.

Used Equipment (page 695)

Suppliers of used equipment and containers for the chemical and process industries.

Trade Names (page 700)

An alphabetical list of all trade names pertaining to the products listed in the *Chemicals, Raw Materials and Specialties Section* and the *Equipment and Containers and Supplies Section* with product identification and name of company.

Index of Advertisers (page 722)

An alphabetical listing of all advertisers in the Buyers' Guide, showing the page number of their advertisements.

We hope that you find this year's Buyers' Guide Issue more accurate, complete and useful than ever before. Your comments and criticisms will be welcome.

The Editors.

THE CHEMICAL PROCESS INDUSTRIES

It's America's Largest Industrial Market . . .
. . . Your Biggest Sales Target

To measure an industrial market, look first at the dollars it invests . . . for new plants, equipment and materials. Then consider its consumption of power and fuels to drive machinery and equipment. By these yardsticks you'll see chemical processing in your No. 1 Sales Target. For year after year it spends more . . . uses more power and fuel than any other industrial group.

CAPITAL EXPENDITURES FOR NEW PLANTS AND EQUIPMENT

1947	$2,100,000,000
1950	3,300,000,000
1951 (planned)	5,400,000,000

RAW MATERIALS AND MATERIALS OF CONSTRUCTION

1947	$20,000,000,000
1950	22,200,000,000
1951 (planned)	26,500,000,000

POWER AND FUELS CONSUMPTION

(Percent used by Process Industries versus all Manufacturing)

Electricity (Generated and Purchased)	44%
All Fuels and Energy (Total BTU Equivalent)	35%
Total Energy Value ($926,911,000)	28%

This Is The Chemical Process Field

. . . and here is your market: the worthwhile* plants of the CPI

Number of Plants	Major Product Classification
894	Chemicals
35	Coke Oven Products
564	Drugs, Medicines & Toilet Preparations
83	Explosives and Fireworks
320	Fertilizers
1,288	Glass and Ceramics
305	Leather Products
245	Lime and Cement
77	Metallurgical Products

Number of Plants	Major Product Classification
625	Paper and Pulp
520	Paints, Varnishes and Pigments
625	Oils and Fats
414	Petroleum Products
127	Plastics Materials
40	Rayon and Synthetic Textiles
485	Rubber Products
232	Soap, Cleaning and Polishing Products
1,724	Other Plants Making Chemically Processed Products

8603 Plants . . . 1/5 of All U.S. Manufacturing Output
. . . more than 1/3 of Total Buying Power

*Plants with more than 20 employees

BRAUN

A comprehensive range of

Industrial Chemicals

L. C. L. and Carload Lots

BRAUN CORPORATION

2260 East 15th St., Los Angeles 21, Calif.

MEFFORD CHEMICAL CO.

1026 Santa Fe Ave.,
Los Angeles 21,
Calif.

Telephone - Trinity 6894

MOST COMPLETE LINE OF INDUSTRIAL AND FINE CHEMICALS

ON THE PACIFIC COAST

Service ★ Integrity ★ Experience

The L. H. Butcher Co., established 1890, maintains the following depts.

- Chemical
- Plating
- Insecticide
- Ceramic
- Machinery
- Paint Raw Materials
- Glass Shop Supplies

Consultant available at all times . . . no charge, of course

Our Chemical List Mailed on Request

LITHIUM HEADQUARTERS—Your best single source of supply for Lithium Salts and Lithium Metal in experimental or commercial quantities.

4 FACTORS Give Metalloy Strictest Product Control Over Quality Of Their Lithium Metal And Salts:

1. Company owned ore deposits and concentration facilities.
2. Complete chemical processing and electro-metallurgical plant.
3. Extensive research facilities.
4. Exclusive attention to Lithium—its research, development, production and application for Industry.

DATA SHEETS are available for all products. Metalloy's research team is ready to serve you by suggesting the best applications of Lithium to your problems. Formulae, plant equipment and operating conditions vary. Use our research facilities to determine best results for your individual requirements.

Write Dept. G for complete information.

A leading producer of Paraformaldehyde (flake), Formaldehyde, Acetaldehyde and Acetic Acid, as well as many other standard and special organic chemicals.

More than 18 years of planned research together with the most advanced plant facilities enable Celanese to meet the changing needs of chemical markets.

Consider these advantages:

- *VOLUME SUPPLY OF QUALITY CONTROLLED ORGANIC CHEMICALS*
- *ASSURED CONTINUITY OF SUPPLY THROUGH ABUNDANT RAW MATERIAL SOURCES*
- *LOWEST POSSIBLE PRICES TO INDUSTRY*
- *DISTRIBUTION AND STORAGE FACILITIES AT STRATEGIC LOCATIONS*
- *CONTINUOUS RESEARCH AND DEVELOPMENT*

New Philadelphia, Ohio	

Titanium Alloy Mfg. Division are pioneers in the development of both elements . . . Titanium and Zirconium. For over 40 years, all the resources and efforts of this company have been devoted to exploiting the alloys of Titanium and the compounds of Zirconium and Titanium. With the cooperation of the technical staffs of many customers, researchers and members of the field staff have originated major applications in over 20 industries.

ZIRCONIUM COMPOUNDS

The possibilities and uses of ZIRCONIUM and its compounds in industry are extensive and increasingly larger. At the same time, current developments in progress point to still further expansion of the various products now used successfully in large quantities in the manufacture of Refractories, Electrical Resistors, Dye Extenders, Water Repellents of Textiles, Catalysts, Abrasives, Vitreous Enamel and Glaze Opacifiers, Toners, etc.

TAM Zirconium Metal—Atomic weight of Zirconium is 91.22—specific gravity 6.4. The atomic heat varies from 6.07 to 7.31 at temperatures ranging from 0° to 100° C. Melting point of the metal has not been accurately determined due to probable variation of the purity of the metal under observation and has been reported from 1529° to 1700° C. Zirconium is quadrivalent. Its atomic number is 40 in the periodic system. It has a great affinity for oxygen and at elevated temperatures combines readily with nitrogen, phosphorus, sulfur, the halogens and the like. Zirconium has value as an oxygen getter and is used in flashlight bulbs, as an Oxygen and Nitrogen getter in radio broadcasting and vacuum tubes. The metal is of interest in the above Energy program and due to its high resistance to acids, in chemical equipment, etc.

Zirconium Oxide ZrO_2—Color, white—Specific gravity about 5.6—Melting point about 2700° C. Ignited Zirconium Oxide (fused) is practically insoluble in all mineral and organic acids except Hydrofluoric and concentrated H_2SO_4. It is insoluble in aqueous solutions of alkaline reagents. It will form Zirconates when dissolved in molten caustic alkalies of certain chlorides. It is relatively insoluble in many glass compositions. It has a high refractive index and in some forms a fair hiding power. It is powerfully cantoluminescent.

These properties make Zirconium Oxide commercially important as an opacifier in ceramics, in super refractories, in optical glass polishing, etc. Research with this compound also indicates high ultra violet repelling properties.

Stabilized Zirconia exhibits excellent thermal shock properties. This advantage plus the very high melting point (4600° to 4700° F) makes it an outstanding refractory for high temperature applications. The development of Stabilized Zirconia is of recent date and data covering its resistance to various alloys, metals, atmospheres, etc., have not been fully determined. Cooperative research is invited.

Zirconium Silicate (Zircon) $ZrSiO_4$—Hardness 7.5—Color, mainly colorless—Index of refraction 1.93 B—Dispersion 2 V 10°—Crystalline Tetragonal—Cleavage 110 rare—specific gravity 4.65—Melting point between 2200°-2300° C., coefficient of expansion is low. Zircon is a good electrical insulator at elevated temperatures and imparts good heat shock resistance in such bodies. Zircon is practically insoluble in all mineral and organic acids. It is unaffected by aqueous solutions of alkaline reagents, either hot or cold. The mineral is decomposed by alkaline fusions.

These properties, among others, make Zircon valuable in industries such as ceramics, heavy chemicals, super refractories, abrasives, dental and high temperature casting cements, mold and core washers, and electrical resistance compounds. Zircon refractories are used in considerable quantities in industries such as phosphates, aluminum refining, precious metals, etc. Crucibles made from this compound exhibit high heat shock resistance. Titanium Alloy Mfg. Division produces Zirconium Silicates of various purities for various uses.

Zirconium Silicate (Zircon) Refractories—These refractories are used in the manufacture of meta phosphates, aluminum refining, platinum and other precious metal melting, high temperature burner block applications and for many other special purposes.

They operate safely up to 2000° C., exhibit good heat shock and abrasion resistance properties and resist the action of various acids and acid slags.

A complete line of standard and special shapes is manufactured.

Zirconium Silicate (Zircon) Electrical Cements—These cements are used in increasing quantities for electrical insulation of heater units such as strip heaters, flat irons, stove units, etc., because they exhibit exceptionally low operating and humidification leakages and extremely fast returns to normal after humidification tests are completed.

In dry press Flat iron insulation, for instance, TAM Cement type A shows an operating leakage of 0.002 M.A., a standard humidification test leakage of 0.02 M.A., and a return to normal in from 15 to 30 seconds.

In mud cast electrical elements TAM cement type B shows an operating leakage of 0.02 M.A., on humidification 0.5M.A., with a return to Normal in from 10 to 15 seconds.

TAM Zirconium Oxychloride $ZrOCl_2+8H_2O$—Color, cream white—Soluble in water. Stable if kept at temperatures below 80° C. When heated above that temperature, hydrochloric acid is liberated, and when calcined ZrO_3 remains. Alkali metal carbonates first precipitate the Zr as hydroxide which dissolves in an excess to form Zirconium Carbonate. This compound is stable only when cold. If heated, Zirconium Carbonate decomposes yielding the hydroxide.

Ammonium Carbonate precipitates the hydroxide which dissolves in excess reagent to form the soluble carbonate. In presence of organic acids, the precipitation of Zirconium hydrate with alkalies can be hindered or prevented.

Phosphoric acid and soluble phosphates precipitate Zirconium phosphate. A saturated solution of tannic acid precipitates Zirconium Tannate.

Zirconium oxychloride as well as the sulphate is the basis from which other Zirconium compounds now used in catalysis, water repellence, manufacture of lakes, dye extenders, etc., are precipitated.

Zirconium Acetate, $ZrOOC_2H_3O_2$. $HC_2H_3O_2$.—This compound is furnished in solution form and finds application in water repellent treatment of textiles and in the manufacture of color lakes.

This and other TAM Zirconium compounds are used in water repellent treatment of various types of textiles and produce superior repellence when tested by both standard hydrostatic and spray methods.

Zirconium Sulphate $Zr(SO_4)_2+4H_2O$—Color, practically colorless—the compound is soluble in hot water. The chemical behavior of Zirconium sulphate towards other reagents is approximately the same as the oxychloride.

Space does not permit mentioning the properties and uses of other Zirconium compounds manufactured by the Titanium Alloy Mfg. Division such as Zirconium Nitrate, Carbide, Tetrachloride, Sodium Zirconium Silicate, Potassium and Barium Zirconium Silicates, Stearate, and many others.

Chemical analysis and properties will be gladly furnished. Samples of Zirconium Lactate, Zirconium Hydrate and Zirconium Hydrate Carbonated or other Zirconium compounds can be prepared for experimental purposes.

TAM RESEARCH CO-OPERATION

TAM laboratories at Niagara Falls contain extensive facilities for research and control along chemical, metallurgical and ceramic lines. Of equal or greater importance is the unique precision equipment maintained for experimental work and the testing of finished products.

The benefits of this modern specialized research are available to industry through a practical engineering staff constantly at work in the field. Qualified by training and experience, these men have the knowledge that makes their assistance in working out problems in your plant especially valuable.

TAM TITANIUM PRODUCTS INCLUDE

TITANIUM COMPOUNDS

Titanium compounds are finding a variety of uses in industry today for such applications as welding rod coatings, scavengers of steel, carbide tools, electrical condensers, acid resisting ceramic coatings and others.

Titanium Alloys—Titanium alloys such as low, medium, high carbon Ferro Titanium, Iron and Steel Foundry are used in large and increasing quantities as carbon stabilizer of stainless steels and porcelain enameling iron and as alloy additions. Some of these alloys find volume application as steel cleansers and deoxidizers and as grain refiners and graphitizers of cast iron.

Alloys such as nickel and manganese Titanium find application in weld rod coating and as alloy additions.

Titanium Carbide TiC—This compound is very hard, has high abrasive value and its melting point and behavior toward other reagents are similar to the properties of Titanium Cyanonitride. TiC finds an ever increasing application in the carbide tool industry.

Rutile—A Titanium Oxide mineral, found in various parts of the world, finds considerable application in welding rod coatings where it, in conjunction with other compounds, aids in the stabilization of the arc, speed of welding, proper slag formation, and in the production of welds of satisfactory elongation, density, strength and endurance. Rutiles are also used as staining compounds by the Ceramic Industry.

Titanium Alloy Mfg. Division produces Rutiles containing approximately 93% Titanium Oxide, all of them of exceptional uniformity.

Titanates—Titanates manufactured by the Titanium Alloy Mfg. Division, such as sodium and potassium, find increasing uses in welding rod coatings, and the Titanates of barium, calcium, strontium & magnesium are used in large quantities in the manufacture of radio condensers, electrical resistors, etc.

$TiCl_4$ is a colorless (commercial grade amber with reddish tint) transparent liquid. The specific gravity is 1.76, melting point 25° C. and boiling point 136.4° C. $TiCl_4$ hydrolyzes readily in the presence of moisture and forms basic chloride or titanic acid and hydrochloric acid. $TiCl_4$ reacts readily with many organic substances.

TAM Titanium Cyanonitride—Color, silvery gray, specific gravity about 5.0, melting point in reducing atmosphere over 2750° C. Heating to red heat imparts a variegated range of beautiful surface colors.

Various other Titanium and Zirconium compounds are manufactured and available for many applications too numerous to mention. Complete data and information sent on request.

A carefully technical trained field staff located in various parts of the country are at your service at all times.

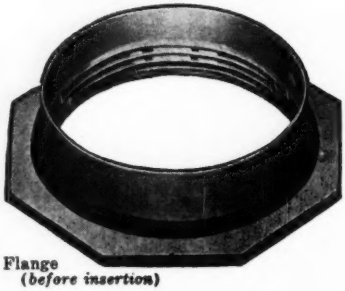
CLOSURES



The Seal

The Plug

The Flange
(before insertion)

The Tri-Sure Closure* was designed to meet the demands of oil and chemical companies for a soundly-engineered sealing device which would safeguard liquids in drums from the hazards of transit.

Today the Tri-Sure Closure is used in more countries, by more companies, and for more products than any other closure—because it is recognized as the most reliable means of ensuring the delivery of the exact quantity and quality which the shipper puts into the package.

The Tri-Sure Closure provides a margin of safety which far surpasses the requirements of the average container:

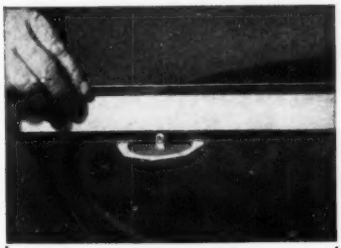
Safety from Leakage and Seepage
Safety from Internal and External Pressure
Safety from Breathing-in and Contamination
Safety from Pilferage and Substitution

This multiple assurance of safety is achieved by the perfect inter-engagement of three precisely-formed parts—a flange, a plug and a seal.

THE FLANGE**

The Tri-Sure Steel Flange is inserted as an integral part of the drum stock—as strong as the drum itself. An octagonal seat formed in the drum stock receives the octagonal base of the flange. The neck of the flange fits snugly within the collar of the drum stock, which extends upward from the octagonal seat. The extending end of the neck is curled tightly over the free end of that collar, thus strongly compressing the flange gasket, and drawing the base of the flange up into its octagonal seat. This exclusive Tri-Sure assembly resists rotation, distortion and leakage.

AMERICAN FLANGE & MANUFACTURING CO. INC.



THE PLUG**

The Tri-Sure Plug fits securely into the flange to effect a tight closing. The plug is die-cast from a high-grade die-casting alloy, enabling its dimensions to be maintained within close tolerance. The gasket seat is exactly formed, and its relationship to the plug threads is exactly maintained. The result is that Tri-Sure Plug gaskets seat with perfect uniformity and efficiency.

Tri-Sure Plugs are available in three sizes—2", 1½", and ¾"—all with holes for wire-sealing. The 2" and 1½" plugs are provided with either eyelets or threaded adapters on their bases to receive faucets. Rolled thread or pressed steel plugs are also available.

THE SEAL

The Tri-Sure Seal is made of 195-lb. plate. With its own gasket, it forms a leak-proof, air-tight covering for the closure which prevents breathing-in, intake of dust, and seepage. When the seal is applied, with the special sealing tool, the skirt of the seal is pressed in against the neck of the drum stock, and extends practically to the base of that neck, so that the seal cannot be pried off without destroying it, making undetected tampering, pilferage or substitution impossible. Scored lines on seal make its authorized removal an easy, quick operation.

TRI-SURE FULL DRAINAGE SAVES 8.34 OUNCES IN EVERY DRUM

The base of the Tri-Sure Flange is perfectly flush with the inside of the drumhead. This flush fitting of the flange is an invaluable feature, as it assures full drainage, and the saving of considerable gallonage from waste. Tests have shown that drums fitted with Tri-Sure Closures drain an average of 8.34 more ounces. Calculated on the basis of a 10,000 55-gal. drum shipment, the consumer will recover over 650 gals. which would otherwise remain in the drums.

Tri-Sure Seals can be supplied with your name, trademark or other insignia—designed and lithographed in full color to your exact specifications. These customer-designed seals provide attractive product identification, and many hundreds of private designs are now in use in the United States alone.

PLAY SAFE—BY SPECIFYING "TRI-SURE CLOSURES" ON DRUM ORDERS

Any drum manufacturer, in any country, can supply you with drums equipped with Tri-Sure Closures. A Tri-Sure Flange is inserted as an integral part of the steel container body at the time of manufacture. Precision dies for this operation, supplied by our company, are in the plants of all drum manufacturers. Just specify Tri-Sure Closures to your supplier, and your drums will be delivered with flanges and plugs; you apply the seals.

Specify Tri-Sure Closures on every drum order, as an expression of the pride you take in your product—and as proof to your customers that every gallon in every drum is protected from leakage, seepage, tampering and pilferage.

**The "Tri-Sure" Trademark is a mark of reliability backed by 29 years serving industry. It tells your customers that genuine Tri-Sure Flanges (inserted with genuine Tri-Sure dies), Plugs and Seals were used.*

***2" flanges and plugs manufactured with American and also British (Whitworth) Thread.*

New Tri-Sure Products

TRI-SURE SIDE-SCORED SEAL WITH FLOWED-IN GASKET

This new seal, embodying wings and side-scoring, marks an outstanding achievement in ease of removal—at the same time retaining the same high quality and positive protection that are exclusive with Tri-Sure Seals. Like all Tri-Sure Seals, it gives protection from leakage, seepage, and pilferage.

For lined or coated steel containers

NEW POLYTHENE PLUG WITH SPECIAL CAP SEAL

This new Polythene Plug is made of tough, chemically inert plastic, with gasket molded in place. It is designed to complete the elimination of metal surfaces in lined or coated steel containers, and, with the special cap seal, provide security from leakage, pilferage and substitution. Resistant to most corrosive acids and alkalis.

NEW LACQUERED FITTINGS FOR LINED OR COATED CONTAINERS

Where flanges and plugs are used in lined or coated steel containers, this lacquer provides a way to eliminate contact of product with metal fittings. The lacquer is applied so smoothly and evenly by an electrostatic system that no bubbles form, and the depth of threads is maintained for perfect engagement.

Asbestos FIBER PRODUCTS

Because of their resistance to the corrosive action of acid fumes, vapors and gases, asbestos fiber and asbestos products have a wide range of applications in the chemical industry.

Johns-Manville produces all grades and lengths of asbestos fiber, each representing the highest value in its class and the utmost uniformity in grading and volume. J-M Asbestos Products include:

• Insulations • Transite Movable Walls • Brake Linings • Clutch Facings
• Chemstone Panels • Roofing and Siding • Transite Industrial Vent Pipe
• Packings and Gaskets • Flexboard • Flooring • Transite Water and Sewer Pipe

It's too late . . .

for this edition. But, if you sell to the chemical process industries, you can be represented in our next issue. We can list your company under the products you sell. It will help us make the Buyers' Guide Issue even more complete. And it will help the thousands of buyers who use the Buyers' Guide Issue to route their inquiries, place their orders. What to do? Just drop us a line and tell us about your products.

CHEMICAL WEEK
Buyers' Guide Issue
330 W. 42nd St., New York 36, N.Y.

Chemicals, Raw Materials & Specialties

(Research Chemicals listed on page 174)

ABIETIC ANHYDRIDE see Rosin, Gum

ABIETINIC ACID see Acid, Abietic

ABRASIVES, GRINDING

Materials of sufficient physical hardness to grind or polish the surface of metals, etc., by mechanical rubbing or wearing. See also Emery, Iron Oxide Red, Pumice, Rotten Stone, Silica.

*Bay State Abrasive Products Co, Westboro, Mass
*Block Bros, 141-149 2 Ave S, Nashville 2, Tenn
*Carborundum Co, Box 337, Niagara Falls, N Y
*Exolon Co, Tonawanda, N Y
Fay-Cole & Co, 71 India St, Boston, Mass
*K F Griffiths & Co, 280 Madison Ave, N Y 16
*Harrison & Co, 487 Groveland St, Haverhill, Mass
John W Higman Co, 24 State St, N Y 4
*Keystone Emery Mills, 1660 Church St, Phila 24, Pa
L J & M La Place, Leliarts Lane, E Paterson, N J
*Macklin Co, 2914 Wildwood Rd, Jackson, Mich
New England Quartz Co, 454 7 Ave, N Y 1
*Pittsburgh Plate Glass Co, Corona Chem Div, 235 E Pittsburgh Ave, Milwaukee, Wis

ABRASIVES FOR DETERGENTS, POLISHES

Materials with gentle abrasive action which clean or polish without marring the smooth surface of brass, silver and other soft metals, enamels, glass, marble, etc. See also Bentonite, Diatomaceous Earth, Talc, Tripoli, Volcanic Ash, etc.

Bergstrom Trading Co, 233 Broadway, N Y
*Carborundum Co, Box 337, Niagara Falls, N Y
Charles B Chrystal Co, 53 Park Pl, N Y 7
*Composition Materials Co, 28 W 44 St, N Y
*Exolon Co, Tonawanda, N Y
*Mitchell Fels, 274 E Ashmead St, Box 4270, Phila 44, Pa
*Great Lakes Carbon Corp, 18 E 48 St, N Y 17
*K F Griffiths & Co, 280 Madison Ave, N Y 16
Hammill & Gillespie, 225 Broadway, N Y 7

ACETATE OF LIME see Calcium Acetate

$(CH_3CO)_2O$. M.W. 102.05. Colorless liq., strong acetic odor. Sp. gr. 1.082 (15°C). B.P. 139.6°C. Sol. alcohol, chloroform, ether. Decomp. with water to acetic acid. Uses—mfr. alkyl acetates, fine chemicals, intermediates, synth. drugs, synth. dyes, cellulose

acetic anhydride

• Eastman acetic anhydride is widely used for acetylations requiring a stronger reactant than acetic acid. Its high quality and uniformity recommend its use also as a dehydrating agent in reactions such as nitrations and sulfonations where the removal of water is necessary. Available in drums and tank cars.

ACETONE CYANOHYDRIN (a-Hydroxyisobutyronitrile)

$(CH_3)_2C(OH)CN$. M.W. 85.06. Colorless to straw-colored liq. B.P. 82°C at 23 mm. Sol. water, alcohol, ether. Uses—production of methyl methacrylate resins, solvent, organic intermediate.

*American Cyanamid Co, Industrial Chem Div, 30 Rockefeller Plaza, N Y 20
*Bios Labs, 17 W 60 St, N Y 23
*Rohm & Haas Co, Washington Sq, Phila 5, Pa
*E I Du Pont de Nemours & Co, Polychemicals Dept, Wilmington 98, Del

ACETONITRILE (Methyl, Cyanide)

CH_3CN. M.W. 1405. Colorless liq. M.P. —44°C. B.P. 82°C.

American Firstoline Corp, 420 Lexington Ave, N Y
*Carbide & Carbon Chem Co, 30 E 42 St, N Y 17
Fisher Scientific Co, 635 Greenwich & Morton Sts, N Y 14

ACETONYL ACETONE

$CH_3(CO)CH_2CH_2(CO)CH_3$. A colorless, water-sol. liq. B.P. 191.3°C. Solvent for cellulose acetate, with a xylene nitrocellulose dilution ratio of 1.8. A small per cent, reduces the viscosity of nitrocellulose and Vinylite resin solutions. Being a 1,4-diketone, it condenses with reagents to form ring compounds which are derivatives of furan thiophene, and pyrrole, thus providing a simple method for passing from open chain to cyclic compounds. Has a tanning effect on hides and skins.

*Carbide & Carbon Chem Co, 30 E 42 St, N Y 17

ACETOPHEN see Acid, Acetylsalicylic

ACETOPHENETIDIN (Phenacetin, p-Ethoxyacetanilid)

$C_{10}H_{13}O_2N$. M.W. 179.20. White, fine crystalline powd., having no odor and a sl. bitter taste. M.P. 134.9°C. Sol. in organic solvents; sl. sol. in water. Uses—in medicines, as antipyretic and sedative. Grades—U.S.P. XI.

Niacet
TRADE-MARK

ACETONITRILE
$CH_3C{\equiv}N$

NIACET Acetonitrile is a stable, clear, colorless liquid with an aromatic odor. It has a boiling range of 80 to 82° C., a purity of 99.0% minimum, and a specific gravity of 0.782 to 0.785 at 20°C. It is an excellent solvent and extraction agent and is used for the preparation of vitamin B_1 thioacetamide, and pyrimidines. Shipped in 350 lb. net steel drums.

ACETYL ISOBUTYRYL

$CH_3COCOCH(CH_3)$ Yellow liq. B.P. 118°C. Partly sol. in water. Uses—flavoring. Grades—commercial.

*Fairmount Chem Co, 600 Ferry St, Newark 5, N J

ACETYL METHYL CARBINOL (Acetoin)

CH_3-CO-CHOH-CH_3. Sl. yellow liq. with tendency to slowly change into crystalline polymer which can be converted back into monomer by careful melting of cryst. S.G. 1.016 (15°C); B.P. 140°C.-144°C. Miscible with water in all proportions. In contact with air slowly oxidizes to diacetyl. Uses—in place of diacetyl in cases where diacetyl itself is too volatile. Grades—90% acetyl methyl carbinol.

*Fairmount Chem Co, 600 Ferry St, Newark 5, N J
*Novadel-Agene Corp, Lucidol Div, 1740 Military Rd, Buffalo 5, N Y

ACETYL OXIDE see Acetic Anhydride

ACETYL PEROXIDE

$(CH_3CO)_2O_2$. M.W. 118. Crystal clear liq.; strong odor. Sol. most organic solvents. Uses—source of free radicals in organic synthesis; catalyst for bulk polymerization; modification of oils; vulcanizing and curing agent for rubber; decolorizing agent.

*Becco Sales Corp, Sta B, Buffalo 7, N Y

ACETYLPHENOL see Phenyl Acetate

ACETYL-p-PHENYLENEDIAMINE see p-Aminoacetanilide

ACETYLPROPANE see Methyl Propyl Ketone

ACETYL PROPIONYL

$CH_3COCOCH_2CH_3$. Yellow liq. B.P. 106°-110°C. Partly sol. in water. Uses—flavors of butterscotch and chocolate type.

*Fairmount Chem Co, 600 Ferry St, Newark 5, N J

3-ACETYLPYRIDINE

$C_5H_4N(COCH_3)$. M.W. 121.10. Colorless liquid. Uses—nutrition, organic syntheses.

Barclay Chem Co, 75 Varick St, N Y
*Bios Labs, 17 W 60 St, N Y 23
*Farchan Research Labs, 609 E 127 St, Cleveland 8, Ohio

2-ACETYL THIOPHENE

Union Carbide and Carbon Corporation
UCC
30 East 42nd St., New York 17, N. Y.

acetic acid GLACIAL

INDUSTRIAL GRADES OF EXCEPTIONALLY HIGH QUALITY

• Eastman glacial acetic acid is characterized by its uniformly high quality. It is well suited for use as a raw material for many organic syntheses and as a reaction medium and solvent. Eastman glacial acetic acid is soluble in water, alcohol and ether. Available in tank car quantities.

ACIDS & AMMONIA

COMMERCIAL · C.P. REAGENT

ACETIC ACID, Glacial, Redistilled, Commercial and Treated Commercial and Reagent grades.

AMMONIA, Aqua, Commercial and Reagent, in a wide variety of grades and strengths.

BATTERY ACID

HYDROFLUORIC ACID, Anhydrous and in 60%, 70% and 80% strengths, and Reagent grades.

MIXED ACID, varying proportions of Nitric and Sulfuric Acids to meet customers' requirements.

MURIATIC (HYDROCHLORIC) ACID, in Standard, Diamond, Crystal (low impurities) and Reagent grades.

NITRIC ACID, Diamond Grade, practically water white and containing a minimum of impurities, in 36°, 38°, 40°, 42°, Baume, 95%, and fuming grades. Special Photoengravers' Grade. Reagent A.C.S. grade noted for its uniform strength and freedom from impurities.

OLEUM, 10-65% free SO_3 content, higher on special order. Also oleums to which anti-freeze has been added.

OXALIC ACID, Commercial grade, crystals all thru 10 mesh containing a minimum of 99.5% oxalic acid. Also Reagent grade.

SUFAN®, Stabilized Sulfuric Anhydride.

SULFURIC ACID, in Standard, Diamond and Reagent grades.

For laboratory and fine chemical manufacturing uses, "B&A Quality" Reagent A.C.S. Acids

PAS*

p-Aminosalicylic Acid

Increasing amounts of PAS are being used in the U. S. to treat tuberculosis. BUT . . . remember the importance of the chemical analysis. Disturbing side-effects are attributed to contaminants and impurities. PAS—Sumner meets the most rigid specifications. We would appreciate the opportunity to show you our PAS and discuss your needs.

CRESYLIC ACIDS

● Koppers Cresylic Acids are substantially mixtures of cresols and xylenols with some higher boiling phenolic homologues for some grades.

1. Meta Para Cresol 2. U.S.P. Cresol
3. Resin Cresol 4. Ortho Cresol
5. Cresylic Acid
99% minimum purity

Write for further information about Koppers Cresylic Acids. We'll send you data on specific grades and sizes of containers available.

KOPPERS COMPANY, INC.
Tar Products Division
PITTSBURGH 19, PA.

KOPPERS

crotonic acid

● Since crotonic acid possesses a system of conjugated double bonds, it looms as an important raw material for the plastic and surface-coating industries. Its alkyl esters form interesting copolymers with most of the usual vinyl compounds. Reacted with paint oils, crotonic acid or its esters increase weathering resistance. Crotonic acid has also been used as an intermediate in the preparation of synthetic vitamin A. Available in fiber-drum lots.

ACID, DIGLYCOLIC

$HOOCCH_2OCH_2COOH$. M.W. 134.09. White crystalline solid. M.W. 148°C. Sol. water, lower alcohol, acetone, dioxane. Uses—mfr. of alkyd resins, plasticizers, laminating resins; in metal cleaning baths; masking agent for chrome liquors in leather tanning.

*E I Du Pont de Nemours & Co, Polychemicals Dept, Wilmington, Del

ACID, DIPHENYL ACETIC

$C_{14}H_{12}O_2$. M.W. 212.17. Colorless needles. M.P. 148. Sol. hot water, alcohol, ether.

*American-British Chem Supplies, 180 Madison Ave, N Y
Benzol Products Co, 237 South St, Newark 25, N J
*Edward S Burke, 65 Pine St, N Y

Heyden
FORMIC ACID
SODIUM FORMATE
FORMIC ACID, 90% and 85%, serves in many fields, including textile, leather and chemical manufacturing. Shipped in 65 and 125 lb. carboys and 525 lb. stainless steel drums.
Heyden SODIUM FORMATE has proved its high quality in the dyeing, tanning, paper and chemical industries. Shipped in 300 lb. fiber drums.

ACID, HYDROFLUORIC (Acid, Fluorhydric, Hydrogen Gluoride, Acid, Pthoric)

HF. M.W. 20.01. Colorless, fuming, corrosive liq. Sp. gr. 0.95 (gas). M.P. —92.3°C. B.P. 19.44°C. Sol. water. Uses—mfr. fluorides, inorganic chemicals, asbless filter paper; in etching glass; etching physical instruments; fermenting yeast; treating ceramics; purifying sugar; as laboratory reagent; electroplating reagent; antisepic in brewing. Grades—C.P.; fuming; tech.; 62%, 52%, 48%, 40%, 30%; dilute (2%).

ACID, MURIATIC (Acid, Hydrochloric, Acid, Chlorohydric, (I))

HCl. M.W. 36.46. Colorless of sl. yellow solution of gas in water, pungent odor. Sp. gr. 1.194 at 85.8°C. M.P. —111.0°C. Sol. water, alcohol, ether. Uses—mfr. chlorides, acids, carbon dioxide, chlorine, sal ammoniac, inorganic preparations, organic and intermediate chemicals, aniline, resorcin, pharmaceutical, synth. perfumes, azo dyes, coal tar colors, pyrotechnic compositions, phosphate from bones, bone and animal glues; treating oils, fats and tallow; purifying sand and clay; chrome tanning; dehairing hides; etching, pickling and mercerizing agent; laboratory reagent; electro-plating; process engraving; reclaiming rubber; purifying spent bone-black; sour in bleaching textiles; assist in dyeing and printing; in medicine. Grades—tech. 16, 18, 20, and 22 deg. Baume; C.P.; U.S.P.; white.

THE KEY TO HARCHEM BETTER PLASTICS

SEBACIC ACID

AN UNUSUAL TOOL FOR THE CHEMICAL INDUSTRY

SEBACIC ACID is one of the most versatile basic raw materials available to the chemical industry. The HARDESTY CHEMICAL CO. manufactures Sebacic Acid in two grades—both of which are available in tonnage quantities.

Sebacic Acid is a free flowing powder, white in color, with a high melting point. Its chemical reactions are similar to those of other aliphatic acids and it is easily converted to esters, salts, amides, ester-amides, acid chlorides and many other useful derivatives.

USES: Widely used in Plasticizers, Alkyd Resins, Fibres, Paint Products and other applications where its high heat stability and purity are of great advantage.

ACID, SODIUM FLUORIDE see Sodium Bifluoride

HYDROGENATED STEARIC ACID

Drew produces a number of grades of distilled and undistilled Stearic Acids. Choose the grade that meets your requirements. Use the undistilled grades where economy is more important than color.

Drew quality stearic acids are used in the manufacture of rubber products, candles, crayons, polishes, waxes, soaps, hand lotions, deodorants, cleansing creams, medicated creams, face powders, and many other products.

STEARIC ACIDS

Unlike usual "stearic" acids (which contain less than 50% stearic acid) are Armour's fractionally distilled Neo-Fat stearic acids:

NEO-FAT 1-60 (75% stearic) affords uniform high quality at reasonable cost. Used in rubber, stearates, buffing compounds, greases, etc.

NEO-FAT 1-65 (90% stearic) offers maximum stearic acid concentration. A superior raw material for metallic soaps, cosmetics, pharmaceuticals, rubber compounding, hard greases, chemical synthesis.

ARMOUR *Chemical Division*

Armour and Company • 1355 W. 31st Street • Chicago 9, Ill.

B.P. 383°C. Sol. alcohol, ether, carbon bisulfide, carbon tetrachloride, chloroform. Slightly sol. water. Uses—mfr. stearates, stearate driers, cosmetics, soaps, pyrotechnic compositions, candles, shoe and metal polishes; in medicine. Grades—saponified; distilled; single, double; triple pressed; U.S.P.

Hystrene* Stearic Acid

means highest purity in 3 ways

1. **Controlled uniform concentrations of true stearic acid from 70% to 97%.**
2. **Unsaponifiable matter below 0.2%.**
3. **Iodine value below 0.5.**

Exceptionally high color stability at elevated temperatures . . . particularly suitable for soaps, esters and other derivatives.

DAVISON

Inorganic Acids

SULPHURIC ACID (H_2SO_4)

Contact Acid—Commercial grades: 60° Bé.; 66° Bé. and 98%; various commercial grades of Oleum up to 40%.

(*Shipment: Facilities for loading tank cars or barges.*)

HYDROFLUOSILICIC ACID (H_2SiF_6)

Technical grade; colorless fuming liquid, highly corrosive. Approximately 25% H_2SiF_6.

(*Shipment: In rubber-lined tank cars and rubber-lined drums.*)

USES

In ceramics; disinfectant of brass and copper vessels in breweries; technical paints; wood preservatives; impregnating compound and in electrolytic refining of lead.

Further information will be furnished upon request.

FATTY ACIDS	PRINCIPAL USES	CHEMICAL CHARACTERISTICS			
		ACID No.	SAP. No.	Iod. No.*	Titre °C
Capric Acid, Technical, Distilled	Base for chemical synthesis, wetting agents	308-315	310-320	1.5-3	19-22
Castor Fatty Acids (ricinoleic acid Tech.)	Cosmetics, shampoos, synthetic resins—esters	170-180	185-195	85-90	below 5
Chinawood Fatty Acids, Split (Elaeostearic Acid Tech)	Driers, varnish compounds—esters	195-202	198-204	160	38-44
Cocoanut Fatty Acids, C.S.	Soaps, shaving creams, shampoos, rubber wetting agent, esters, plasticizers	250-260	260-275	10-15	——
Cocoanut Fatty Acids, Distilled	Soaps, shaving creams, shampoos, rubber wetting agent, alkyd resins—esters	260-270	263-274	9-15	21-25
Conjulin Fatty Acid (Linseed)	Synthetic resins, driers—esters	197-199	199-201	180-185X	18-24
Conjusoy Fatty Acid (Soyabean)	Synthetic resins, driers—esters	197-199	199-201	130-140X	19-23
Corn Fatty Acid Distilled	Soap	194-202	195-203	105-125	27-33
Cottonseed Fatty Acids, Supra Distilled	Alkyd Resins—esters	197-204	198-203	90-110	36-40
Cottonseed Fatty Acids, Distilled	Soaps	194-202	195-200	85-110	34-39
Cottonseed Fatty Acids, High Titre, Dist.	Base for soap greases and soaps	200-208	201-210	65-73	43-48
C.P. Soapstock, Single Distilled	Soaps	170-190	173-193	65-100	26-35
C.P. Soapstock, Double Distilled	Soaps	182-194	185-196	72-96	31-36
Distoline, Distilled	Kier assistant, soaps, metal polishes, driers, insecticides, pulp and paper manufacturing	192-196	193-198	105-125	20-24
Fatty Acid, No. 147	Hard and metallic soaps and grease bases, drawing and buffing compounds, rubber	196-200	198-202	7.5-8.5	62-64
Fatty Acid No. 149	Rubber Compounding, pharmaceuticals, cosmetics, soaps, candles, recording material	204-206	205-208	6.5 max.	58-59
Fatty Acid No. 150	Candles, recording material, rubber, metallic soaps, pharmaceuticals, cosmetics, emulsifying agents, buffing compounds, esters	204-206	205-207	3.5 max.	63-64
Fatty Acid No. 646, Distilled	Soyabean and linseed type Alkyd Resins	185-190	187-194	115-120	25-28
Helioline "A" Distilled	Alkyd Resins, synthetic drying oils	195-200	196-200	120-130	20-24
Helioline "S" Distilled	Dry cleaning soaps	195-200	196-200	110-125	20-24
High Titre Vegetable Fatty Acid	Soaps, Lubricating Greases	200-208	201-209	70-90	42-48
Isoline Fatty Acid, Distilled (9-11 octadecadienoic acid — 1) Supra	Alkyd Resins—non yellowing; driers—esters	194-198	195-200	150-160†	below 5
Lauric Acid, Technical, Distilled	Chemical Synthesis, Soaps, esters, synthetic detergents	270-280	272-282	1.5-4	30-40
Linseed Fatty Acids "Supra", Distilled	Alkyd Resins of light color, esters	195-200	196-202	175-190	17-22
Linseed Acids, No. 1, Split	Alkyd Resins	185-190	195-202	170-185	15-21
Linseed Acids, No. 3, Distilled	Soaps, emulsifying agents	185-190	188-193	140-150	18-22
Linseed Fatty Acids "W", Distilled	Alkyd Resins, Soaps	194-200	195-202	150-165	21-25
Marine Fatty Acids, Distilled	Soaps, Alkyds	193-195	196-200	127-145	20-24
Marine Fatty Acids, Split	Linoleum, oilcloth	188-190	194-196	158-170	20-21
Mixed Fatty Acids, Distilled	Soap	194-202	195-203	95-120	26-31
Myristic Acid, Distilled	Soaps, Cosmetics	240-245	242-247	4-13	41-44
Olivine, Distilled	Olive type Soaps	196-198	198-200	85-98	22-24
Palm Fatty Acids, Single Distilled	Soaps	195-204	196-206	45-60	42-46
Palm Fatty Acids, Double Distilled	Textile finishing compounds, soaps	197-203	199-206	38-55	44-48
Palm Fatty Acids, Split	Soaps	185-195	195-203	48-56	42-46
Peanut Fatty Acids, Distilled	Soap	194-202	195-203	90-110	26-32
Perilla Fatty Acids, Distilled	Alkyd Resins	196-201	198-204	195-200	11-15
Rapeseed Fatty Acids, Distilled	Alkyd Resins	177-180	180-183	100-110	10-15
Sardine Fatty Acids, Distilled	Alkyd Resins	197-203	200-206	115-130	28-36
Soya Fatty Acid "A" Distilled	Alkyd Resins—Synthetic Drying Oils	194-202	195-203	120-130	23-29
Soya Fatty Acids, "S" Distilled	Soaps	194-202	195-204	115-130	24-30
Soya Fatty Acids, H.R., Distilled	Alkyd Resins of light color—esters	195-200	196-202	130-140	22-26
Soya Fatty Acids, H.R. "Supra" Distilled	Alkyd Resins of very light color—Esters	196-202	197-202	130-140	22-25
Soya Fatty Acids "170"	Alkyd Resins	170-180	171-181	120-135	24-29
Sunflower Fatty Acids, Distilled	Alkyd Resins	197-200	200-203	125-135	20-24
Tallow Fatty Acids, Distilled	Soaps, Synthetic Detergents, leather and Textile Specialties, polishes	197-206	199-210	50-60	40-43

FRACTIONATED DISTILLED COCONUT FATTY ACIDS

E. F. Drew & Co., Inc. is one of the world's largest producers of coconut fatty acids. All Drew coconut fatty acids are processed to remove a large proportion of the lower boiling fatty acid fractions. This extra processing minimizes the "bite" inherent in coconut fatty acids, improves odor and gives greater soap value.

Drew coconut fatty acids are available in a number of grades to meet special requirements and applications.

For information, write

E. F. DREW & CO., Inc.
15 East 26th Street,
New York 10, N.Y.
Chicago • Philadelphia • Boston

FRACTIONATED FATTY ACIDS

Armour's fractionally distilled fatty acids include commercially pure grades of: CAPRYLIC ACID . . . CAPRIC ACID . . . LAURIC ACID . . . MYRISTIC ACID . . . PALMITIC ACID . . . STEARIC ACID . . . as well as special mixtures of these acids and OLEIC-LINOLEIC mixtures.

Also available are Double Distilled Mixed Acids: COTTONSEED . . . CORN OIL . . . SOYBEAN . . . COCOANUT . . . LINSEED . . . PALM OIL . . . ANIMAL.

ACIDS, PHOSPHINIC

$RPHO_2H$. Kerosene phosphinic acid contains a phosphorus-to-carbon linkage and is derived from the hydrocarbons contained in kerosene. It is a brittle, glassy solid of low melting point, soluble in most common organic oxygenated solvents. Benzene phosphinic acid has a characteristic phosphine-like odor. They have possible application as insecticides and fungicides as well as other applications characteristic of organic phosphorus compounds.

KOPPERS
PENACOLITE® ADHESIVES

• Penacolite resorcinol-formaldehyde synthetic resin adhesives are products especially adapted to the bonding of wood and other cellulosic materials, rubber goods, and laminated phenolic plastics. The Penacolites are thermo-setting resins which cure at room temperature to give water-proof, fungus-proof, and weather-proof bonds.

KOPPERS COMPANY, INC.
Chemical Division
PITTSBURGH 19, PA.

RESIN ADHESIVES
WATER-RESISTANT • FAST-SETTING • FLEXIBLE • NON-INFLAMMABLE
Rubber and Resin Emulsions, Cements and Compounds for all Fabricating, Packaging and Sealing Operations.

AGAL see Agar

AGAR (Agal, Bengal, Japan or Chinese Isinglass, Japanese Gelatin, Layor—Carang)

A vegetable gelatin extracted from various marine algae from Pacific and Indian Oceans. Colorless, amorp. Solid. Sol. hot water. Uses—mfr. adhesives; as thickener for soups, ice cream, milk and other foods; nutrient for bacterial cultures; size for silk; thickener and ingredient in dyeing and printing textiles; in sensitized photographic emulsions; in medicine. Grades—U.S.P. No. 1, 2, 3, as to quality and color. American agar, large flake, small flake, ground, bolted.

ALBUMIN, MILK (Wheyalbumin)

An albumene prepared from milk by coagulating the casein. Uses—mfr. adhesives, varnishes, ivory substitutes.

Herman Meyer Drug Co, 116-23 Jamaica Ave, Richmond Hill, N Y

DRIOCEL

A specially selected and activated bauxite, manufactured to low iron and high moisture adsorption specifications in a number of standard meshes.

Applicable to the great majority of gas and liquid hydrocarbon and other chemical drying problems, including air dehumidification. Specific applications include drying of rich and lean natural gases, residue gases, feed stocks to isomerization, synthetic rubber, and alkylation units, liquid propane, butane, ethylene, benzene, toluene, technical and electrical oils, refrigerants, air, etc.

ATTAPULGUS CLAY COMPANY

Sales Agents

210 West Washington Square, Philadelphia 5, Pa.

Cable Address: "ATTACLAYCO"

ALBUMIN, TANNATE

Yellowish-white, odorless powd. Uses—in medicine.

ALCOHOL, DENATURED

Colorless liq. Uses—see Alcohol Ethyl. Grades—approximately 75 formulae as prescribed officially by the U. S. Government using various denaturants according to purpose for which intended. Made, sold and used under regulations of U. S. Bureau of Internal Revenue. Tax free. Unfit for beverage use.

THE KEY TO HARCHEM® BETTER PLASTICS

CAPRYL ALCOHOL

(OCTYL ALCOHOL)
(OCTANOL-2)

HARCHEM CAPRYL ALCOHOL, a stable, high-boiling monohydric alcohol is produced in tank-car quantities and is widely used in many industries, including the following:

SOLVENTS
ESTERS
PLASTICIZERS
WETTING AGENTS
EXTRACTANTS
FOAM CONTROL AGENTS
HYDRAULIC OILS
PETROLEUM ADDITIVES
PERFUME INTERMEDIATES
RESINS

Perhaps this excellent industrial chemical will fill a need for you. Our Technical Staff will be glad to supply further information and assist you with your requirements. Your inquiries are invited.

ALCOHOLS

Methanol, Ethanol, Isopropanol, n-Butyl Alcohol, Pentanol-3, Methyl Amyl Alcohol, 2-Ethylbutanol, n-Hexanol, Heptanol-3, 2-Ethylhexanol, Diisobutyl Carbinol, Phenyl Methyl Carbinol, Trimethyl Cyclohexanol, Trimethyl Nonyl Alcohol, 2-Butyl Octanol, Undecanol, Tetradecanol, and Heptadecanol are supplied commercially by CARBIDE. Specially and completely denatured formulas of Ethanol are produced, including anhydrous grades and a proprietary solvent, trade-marked SYNASOL.

CARBIDE AND CARBON CHEMICALS COMPANY

A Division of

Union Carbide and Carbon Corporation

30 E. 42nd St. UCC New York 17, N. Y.

*Carbide & Carbon Chem Co, 30 E 42 St, N Y 17

ALCOHOL, HIGHER FATTY

Produced from natural fats or oils by reducing the fatty acids to the corresponding fatty alcohols. Alcohols most commonly used are cetyl, oleic, stearic, lanolic, laurel, oleyl and cholesterol. In the manufacture of the so-called "soapless soaps" these alcohols are then reacted with sulfuric acid, and the alcohol sulfate is neutralized with caustic soda to form the fat alcohol sulfate. See also sodium laurel sulfate. Uses—for soap, in the place of ordinary soap in textile, laundry and general cleaning; in shampoos, etc.; as dyeing and printing assists.

ISO-OCTYL ALCOHOL

Clear, colorless liquid, miscible with most oxygenated and hydrocarbon type solvents. Principally used for production of esters which function as plasticizers for vinyl resins and nitrile type rubbers, as a lacquer and resin solvent, antifoam agent, and in the manufacture of detergents and wetting agents.

SECONDARY BUTYL ALCOHOL

Clear, colorless liquid among medium boiling group of solvents. Solvent for lacquers and resins, component of hydraulic fluids, coupling agent. Employed in the preparation of esters, secondary butyl xanthate, methyl ethyl ketone.

PETROHOL (Isopropyl Alcohol)

Marketed in 91%, 95% and 99% concentrations. Clear, colorless liquid, completely miscible in water. Used in antiseptics, astringents, emulsions, lotions, shampoos, tonics, cosmetics, bactericides, sterilizers, rubbing compounds, reagents, crystallizations, drugs, food products, cleaning agents, phenolic resin thinner, nitrocellulose dehydration, nitrocellulose coatings. Raw material for acetone, esters, isopropyl ether.

ALDOFORM see Formaldehyde

ALDOL (Acetaldol, Hydroxybutyraldehyde, b-Hydroxybutyraldehyde, Oxybutyraldehyde, Oxybutanol)

$CH_3CH(OH)CH_2CHO$. M.W. 88.06. Colorless liq. Sp. gr. 1.1098. Flash point 181.4°C. F.P. below 0°C. B.P. 83°C. Miscible water, ether, alcohol. Uses—mfr. intermediates, organic chemicals, dyestuffs, perfumes; in engraving; ore flotation; in medicine; in mfr. of rubber antioxidant. Grades—tech. White to dark brown solid with marked hydrophilic colloidal properties.

*Carbide & Carbon Chem Co, 30 E 42 St, N Y 17

ALEPPO GALLS see Nutgalls

ALGIN see also Sodium and Ammonium Alginates

White to dark brown solid with marked hydrophilic colloidal properties. Sol. in water; insol. in organic solvents. Properties of algin vary with source and method of mfr. pH 5-10; viscosity of 1% by wt. water solution, (10 to 4000 cps.) Moisture content, 5-20%; particle properties. Algin includes many of the properties of gelatin, tragacanth, caraya, acacia and locust bean gum, Irish Moss and agar-agar, and is used in lower concentrations. As colloidal stabilizer in ice cream, water ices, and other frozen desserts; suspending agent for cocoa fibers in chocolate milk; colloidal agent in various foodstuffs such as cakes, doughnuts, icings, salad dressings, and confectionery; sizing in textile industry; print pastes; leather finishing; paper coating; pharmaceuticals; cosmetics; waterproofing agent for concrete; boiler-water treatment; water paints; can-sealing compds.; ceramics; creaming latex in rubber mfr.; oil-well drilling muds. Grades—refined (food grades) and tech. (commercial grades).

ALLYL ISOTHIOCYANATE (Allyl Isosulfocyanate, Volatile Oil of Mustard)

$CH_2{:}CH.CH_2NCS$. M.W. 99.11. Colorless or pale yellow, very refractive liq.; very pungent, irritating odor; acrid taste. B.P. 148°. Sl. sol. water; miscible with alcohol. Uses—rubefacient, vesicant.

*Edwal Labs, Ringwood, Ill
*Old Dutch Mustard Co, 80 Metropolitan Ave, Bklyn 11, N Y

ALLYL ISO VALERATE

Dodge & Olcott, 180 Varick St, N Y 14
P R Dreyer, 113 W 19 St, N Y
Florasynth Labs, 1513 Olmstead Ave, N Y 61
*Monomer-Polymer, 511 Lancaster St, Leominster, Mass
*Verona Chem Co, 26 Verona Ave, Newark, N J

ALLYL MERCAPTAN (Allyl Sulfhydrate, 2—Propene—2—Thiol)

$CH_2{:}CH.CH_2SH$. M.W. 74.12. Sl. yellow liq. B.P. 90°C. Miscible with alcohol or ether.

*Edwal Labs, Ringwood, Ill
*Medical Chem Corp, 4122 W Grand Ave, Chicago 51, Ill

ALLYL THIOUREA (Thiosinamine, Rhodalline)

$CH_2{:}CH.CH_2.NH.CS.NH_2$. M.W. 116.14. White cryst.; bitter taste. M.P. 78°. Sol. alcohol, water; sl. sol. ether. Uses—resolvent of cicatrices, preferably used with sod. salicylate.

*Bios Labs, 17 W 60 St, N Y 23
*Edwal Labs, Ringwood, Ill

ALOIN

A mixture of cryst. principles (a pentoside or mixture of pentosides from aloe). Varies in chem. composition and physical and chemical properties according to variety of aloe from which obtained. Lemon-yellow to dark yellow, cryst powd., sl. odor of aloe; bitter taste; darkens on exposure to air and light, solacetone and alkalis. Uses—medicine; stimulates fermentation.

ALUM, SODIUM (Aluminum Sodium Sulfate)

$AlNa(SO_4)_2 \cdot 12H_2O$. M.P. 61°C. Colorless cryst. or powd. Sol. water; insol. alcohol. Uses—same as those of Alum Potash. Grades—tech.

Hawkins Chem Co, 3100 E Hennepin Ave, Minneapolis 13, Minn
*Merrimac Div, Monsanto Chem Co, Boston 49, Mass

ALUMINA see Aluminum Oxide

ALUMINA, Activated

Trade name product. A highly porous and granular form of aluminum oxide having preferential adsorptive capacity for moisture from gases, vapors and some liq. It is available in granules ranging in size from a powd. to pieces (1½ inches). Uses—drying gases and vapors, dehydrating cartridge in the liq. circuit of refrigerating systems, removal.

ALUMINUM (Metal)

Al. Silvery-white metal. Sp. gr. 2.7 M.P. 658°C. B.P. 1800°C. Sol. alkalies and some acids. Uses—for variety of purposes where great strength and low wt. is desirable such as in cooking utensils, airplanes, boats, automobiles, furniture. Also used in alloys.

*Aluminum Co of America, Gulf Bldg, Pittsburgh, Pa
American Firstoline Corp, 420 Lexington Ave, N Y
*Kaiser Aluminum & Chem Co, 1924 Broadway, Oakland 12, Calif
*Reynolds Metals Co, 19 E 47 St, N Y 17

ALUMINUM ACETATE (Basic) (Mordant Salt, Waterproofing Salts, Red Liquor, Oil Pulp, Printers' Acetate)

$Al(OH)(C_2H_3O_2)_2$. M.W. 162.02. White amorp. powd., also 20% sol., water white to pale yellow. Sp. gr. 1.09 (20°C). M.P. 50°C. The 20% solution $(Al(C_2H_3O_2)_3)$ decomp. on heating to the basic acetate. Sl. sol. water; sol. acids. Uses—mfr. color lakes, paints and varnishes; waterproofing and fireproofing textiles; mordant in dyeing and printing; embalming. Grades—tech.; C.P.; in solution.

ALUMINUM OLEATE

$Al(C_{18}H_{33}O_2)_3 + 6H_2O$. Yellowish-white, solid gelatinous mass. Insol. water; sol. turpentine, oil, alkalies; very sl. alcohol, hot ether, benzine. Uses—paint and varnish drier; waterproofing textile; thickening lubricating composition; in turpentine solutions as lacquer for metals; as size. Grades—tech.

American Mineral Spirits Co, 155 E 44 St, N Y 17
J M Baird Co, 147 Nassau St, N Y
Beier Co, 150 Nassau St, N Y 38
*Fred'k A Stresen-Reuter, 2113 W Medill Ave, Chicago 47, Ill
*Witco Chem Co, 295 Madison Ave, N Y 17

ALUMINUM OXALATE

$Al_2(C_2O_4)_3.4H_2O$. M.W. 390. White powd.

*Consolidated Chem Industries, 640 Mellie Esperon Bldg, Houston 2, Tex
*Oronite Chem Co, 38 Sansome St, San Francisco, Cal

ALUMINUM OXIDE (Alumina, Corundum)

Al_2O_3. White, amorp. powd. Sp. gr. 3.73. M.P. 2020°C. Sol. conc. sulfuric acid; insol. water. Uses—mfr. dental cements, laboratory crucibles, refractory articles, ceramics, abrasives; filler in paints and varnishes; mordant in calico printing; in aluminum metal. Grades—from 8 mesh to finest powd.; C.P.; tech.

C L Zimmerman Co, N-204 Cincinnati Union Terminal, Cincinnati 3, Ohio

ALUMINUM PHOSPHATE

$AlPO_4$. White powd. Sol. mineral acids; insol. water. Uses—as a cement mixed with calcium sulfate and sodium silicate; as flux in ceramics.

*J T Baker Chem Co, Phillipsburg, N J
*Mallinckrodt Chem, 2 & Mallinckrodt Sts, St Louis 7, Mo
*Victor Chem Works, 141 W Jackson Blvd, Chicago 4, Ill

ALUMINUM m-PHOSPHATE

$Al(PO_3)_3$. Approx. chem analysis: Al_2O_3, 19.0%; P_2O_5, 79.0%. Loss on ign.; 1.6%. Refractive Index (Amorp.)=1.542=0.005. Suggested applications are as a pigment in paper mfr. and as a source of Al_2O_3 and P_2O_5 in special glasses.

American Mineral Spirits Co, 155 E 44 St, N Y 17
*Monsanto Chem Co, Phosphate Div, 1700 S 2 St, St Louis 4, Mo
*Victor Chem Works, 141 W Jackson Blvd, Chicago 4, Ill

ALUMINUM POWDER (Aluminum Flake)

Al. Silvery solid. Sp. gr. 2.708. M.P. 700°C. B.P. approx. 2200°C. Sol. acids, alkalies; insol. water. Uses—mfr. aluminum salts, pyrotechnics, photographic flashlights, aluminum paints and varnishes, ammoniacal and other explosive compositions, rubber ingredients, paper coating, potteries and porcelains, aluminothermis welding, chemicals, alloys, electrical conductors, fire brick; as catalyst mfr. ammonia; absorbing occluded gases in mfr. steel; in chemical analysis. Grades—dust, flake, standard unpolished, powdered.

AMIDO-MERCURIC CHLORIDE see Mercury, Ammoniated

AMINATE see Aminoguanidine Bicarbonate

AMINES see also Monoethanolamine, Diethanolamine, Triethanolamine, Ethylene Diamine, Acetoacetanilide, Monoamylamine, Diamylamine, etc.

A group of compounds derived from ammonia by substitution of organic radicals for hydrogen atoms. Class includes diamines (2 NH_2 groups), primary and tert. amines, and quaternary bases, for both aliphatic and aromatic series. Amines used commercially include monoethanolamine, diethanolamine, ethylene, diamine, triethanolamine and acetoacetanilide. Uses—as bases; with fatty acids to form soaps; organic synthesis; removal CO_2 from inert gases; softening and moistening agents; acid gas absorbents; solvents, dispersing agents, plasticizing agents; medicinals; rubber accelerators and inhibitors; mfr. dyestuffs.

AMINES

Alkyl Amines, Ethylene Amines, Morpholine, Ethanolamines, Isopropanolamines, Alpha Methylbenzyl Amines, and Acetoacetarylamides are among the amines commercially available from Carbide and Carbon Chemicals. The nitrogen compounds are widely used in many industries as neutralizing agents, emulsifiers, and as raw materials in the synthesis of other important chemical compounds. Many of CARBIDE'S amines are shipped in tank cars, as well as in drums.

For further information, write for our catalog "Nitrogen Compounds."

TERTIARY-ALKYL PRIMARY AMINES FROM ROHM & HAAS

Produced in Commercial Quantities

TERTIARY-OCTYLAMINE

ALKYLAMINE 81 $R\text{-}NH_2$ — Where R = mixture of isomers having 12-15 carbons, with tertiary-alkyl structure.

ALKYLAMINE JM-T $R\text{-}NH_2$ (Technical grade) — Where R = mixture of isomers having an average of 18 carbons, with tertiary-alkyl structure.

ALKYLAMINE JM-R $R\text{-}NH_2$ (Refined grade) — Where R = mixture of isomers having an average of 18 carbons, with tertiary-alkyl structure.

For samples, prices and literature on any of these chemicals, please write to Rohm & Haas Company, Dept. BG, Washington Square, Philadelphia 5, Pa.

AMINES FROM FATS

The ARMEENS are a series of 20 high molecular weight aliphatic amines having alkyl chain lengths of 8 to 18 carbon atoms.

The ARMACS are the water-soluble amine acetates made from the ARMEENS.

Both ARMEENS and ARMACS are available in commercial quantities for use in cationic emulsifiers, wetting agents, plasticizers, water-repellents, ore flotation reagents, synthetic detergents, germicides, chemical synthesis. For descriptive bulletins and samples, write:

AMMONIA (AQUA) (Ammonia Water, Aqua Ammonium, Ammonium Hydrate, Ammonium Hydroxide, Spirits of Hartshorn)

NH_4OH. Varying properties according to compositions. Colorless solution of gas in H_2O. Sp. gr. 0.897 at 15°C (28%). Tech. grade usually 29.4 (26° Be). B.P. 38.5° C. Sol. water. Caution—mix with H_2SO_4 or other mineral acids with care. Uses—mfr. intermediates, organic compounds, synth. drugs, perfumes, ammonia soaps, ammonia salts, anhydrous ammonia, nitric acid (by synthesis), sodium cyanide, soda ash, ammonium nitrate, ammonium picrate, ammonium sulfate, ceramics, glues, cements, inks, laboratory reagents, paper, pulp, blue print paper, smelling salts; as cleaning, bleaching, fireproofing, and resin condensing agents; photographic developer; accelerator in phenolic condensations; refrigerant; vulcanization accelerator; solvent in making cuprammonium rayon; assist in dyeing and printing; in fireproofing wood; lub. compositions; tanning leather; in brass, steel, and metal industries; electrotyping and photo-engraving, scouring wool; in sulfuric acid mfr. to furnish nitre oxides by oxidation; in medicine. Grades—16,18,20,26 deg. solution; tech.: C.P.; U.S.P.

AMMONIUM CARBONATE (Ammonia Crystals, Hartshorn Salts)

$(NH_4H)HCO_3 + (NH_4)(NH_2)CO_2$. Mixture of acid ammonium carbonate and ammonium carbamate. Analyses at 31% NH_3, 57% CO_2, 12% H_2O. White lumps, powd., chips or cubes. M.P. 85°C. Sol. cold water SI. sol. alcohol. Uses—mfr. ammonia salts, organic chemicals, casein colors, baking powd., casein glues and adhesives, fire extinguishing compounds, smelling salts and other perfume products, ceramics; as tanning, cleansing and vulcanizing agents; laboratory reagent; mordant in dyeing and printing; in washing wool; to make hollow goods; in medicine. Grades—U.S.P.; C.P.; tech.; powd., lump, cubes.

AMMONIUM CHLORIDE (Sal Ammoniac, Ammonium Muriate, Salimac, Ammoniac)

NH_4Cl. White to grayish lumps, cryst. or powd. Sp. gr 1.520 (17°C). Volatilizes. Sol. water, glycerol. Uses—mfr. ammonia salts, synth. drugs, perfumes, inorganic and organic compounds, dyes, candles, washing powd.; as electrolyte in batteries and cells; fertilizer; soldering and galvanizing flux; rush cement; pickling agent in tinning; mordant in dyeing and printing; in tanning leather; nickeling and platinizing liquors; in medicine. Grades—tech. (gray, white); U.S.P.; C.P. granulated lump.

QUATERNARY AMMONIUM CHLORIDES

The ARQUADS are Armour's alkyl trimethyl ammonium chloride chemicals — ranging from water-soluble to oil-soluble.

The ARQUADS are available in commercial quantities for use in high potency germicides, fungicides, disinfectants, ore flotation reagents, cationic emulsifiers and detergents, textile softeners, water-treating chemicals, alkaline cleaning compounds, anti-static polishes for plastics, chemical synthesis. For descriptive bulletins and samples, write:

AMMONIUM DICHROMATE see Ammonium Bichromate

AMMONIUM ETHYL PHOSPHATE

75% solution in water. Water-white to yellow tinge. Ammoniacal odor. Sp. gr. 1.23 at 25°C. pH 75% solution to heat. When subjected to elevated temp. for any length of time as solution or while on any article will liberate ammonia with reduction in pH. Suggested Uses—as flame proofing agent for paper, textiles, etc.

*Monsanto Chem Co, Phosphate Div, 1700 S 2 St, St Louis 4, Mo
*Victor Chem Works, 141 W Jackson Blvd, Chicago 4, Ill

AMMONIUM FERROCYANIDE

$(NH_4)_4Fe(CN)_6.3H_2O$. M.W. 338.20. Greenish-yellowish cryst. Sol. water. Uses—as a reagent.

*Henry Bower Chem Mfg Co, Gray's Ferry Rd & 29 St, Phila 46, Pa
*City Chem Corp, 132 W 22 St, N Y 11
Republic Chem Corp, 94 Beekman St, N Y 38

AMMONIUM FLUOBORATE (Ammonium Borofluoride)

NH_4BF_4. M.W. 104.86. Hexagonal prisms. Sp. gr. 1.851 at 17°C. Sol. water, alcohol. Packages as required.

*Baker & Adamson Products, 40 Rector St, N Y
*Gen Chem Div, Allied Chem & Dye Corp, 40 Rector St, N Y 6
*Pelron Corp, 7740 W 47 St, Lyons, Ill

AMMONIUM FLUORIDE (Meat Salt)

NH_4F. White, deliq. crystalline. Sublimes. Sol. water; sl. sol. alcohol. Uses—mfr. fluorides, etching glass; as laboratory reagent, disinfectant and antiseptic in brewing; mordant in dyeing and printing, improving sandy soils. Caution—should be packed in rubber containers. Grades—tech.; C.P.; U.S.P. cryst.

DAVISON
Silicofluorides

AMMONIUM SILICOFLUORIDE $(NH_4)_2 SiF_6$

Technical grade, white, water soluble, fine crystal, minimum 98% $(NH_4)_2 SiF_6$; inert ingredients not over 2%.
Uses: Laundry sour; disinfectant; magnesium sand casting; glass etching; chemical reagent.

MAGNESIUM SILICOFLUORIDE ($MgSiF_6 \cdot 6H_2O$)

Technical grade, white granular crystal; minimum 98% $MgSiF_6 \cdot 6H_2O$; inert ingredients not over 2%.
Uses: principally as concrete hardener, waterproofer and primer preparatory to painting; in ceramic industry.

ZINC SILICOFLUORIDE ($ZnSiF_6 \cdot 6H_2O$)

Technical grade, white granular crystal; minimum 97% $ZnSiF_6 \cdot 6H_2O$; inert ingredients not over 3%.
Uses: Concrete hardener when used in combination with magnesium silicofluoride; laundry sour; wood preservation and mothproofing agent.

CASTING COMPOUND

Casting Compound 23-A is used in the magnesium casting industry. Prevents easily oxidizable metals such as magnesium and magnesium alloys from oxidizing or burning in green sand molds. Used as a flux in melting and pouring magnesium alloys.

POTASSIUM SILICOFLUORIDE

Technical grade; white, odorless fine crystalline powder minimum 97% K_2SiF_6; inert ingredients not over 3%.
Uses: metallurgy of aluminum, in manufacture of porcelain enamel, opalescent glass, artificial marble, as an insecticide, as a chemical intermediate.

★

Shipment in 100 and 400 lb. containers by rail, truck, or water.

Many other uses than those listed are possible. Requests for small quantities for experimental purposes will be given prompt attention. Ask our Technical Service Department for assistance.

AMYL2,4-DICHLOROPHENOXYACETATE

Colorless liq. containing equivalent of approx. 76% of 2,4-D acid. Insol. water; sol. alcohol, kerosene, diesel oil, aromatic petroleum fractions. Uses—for formulation in weed killers.

•Thompson Horticultural Chem Corp, 2600 Conon St, Los Angeles 27, Cal

AMYL FORMATE (Isoamyl Formate, -n Formic Ester)

$H.COO.C_5H_{11}$. M.W. 116.13. Made by treating isoamyl alcohol with formic acid. Has plum smell and is almost water-white. Sp. gr. 0.871 (0.°C). B.P. 123.3-125°C. Ester value 483.8. Miscible in alcohol or ether, very sl. in water. Uses—as a pyroxylin solvent; perfuming leather.

ANIDOL see Diaminophenol Hydrochloride

ANILINE (Aniline Oil, Aminobenzene, Phenylamine, Aminophen, Cyanol, Benzidam)

2,5-dimethoxy aniline

and 2,5-diethoxy aniline

• These Eastman aniline derivatives are used in several interesting dye formations. When diazotized, they can be coupled with salicylic acid to produce chrome yellows. Oil colors or pigments are readily produced by coupling the diazotized dialkoxy anilines with such intermediates as beta-naphthol, beta-naphthylamine, phenol diethanolamine, and phenyl ethyl ethanolamine. Acid eosines are produced by coupling the diazotized dialkoxy anilines with such reactants as the naphthol sulphonic acids. Coupling either aniline derivative with diazotized sulphanilic acid and treating with phosgene produces cotton fast-to-light direct colors. Both available in 35-pound cans and in drum lots.

KOPPERS
IMPRUVOL 20
New Antioxidant for Transformer Oil

IMPRUVOL 20—a compound oil solution of di-tertiary-butyl-para-cresol (DBPC)—greatly extends useful life of transformer oils. Practically all transformer manufacturers have adopted inhibited oil as "standard equipment"—with DBPC as the inhibitor in all instances. Impruvol 20 can be used easily with the simplest equipment.

KOPPERS COMPANY, INC.
Chemical Division
PITTSBURGH 19, PA.

ANTIMONY TRICHLORIDE (Butter of Antimony, Antimonious Chloride)

$SbCl_3$. M.W. 228.13. Colorless, very deliq., translucent cryst. mass; fumes sl. in air. Sp. gr. 3.14; M.P. 73°C. B.P. 225°C. Sol. alcohol, benzene, carbon disulfide, chloroform, ether, acetone. Uses—reagent for chloral aromatic hydrocarbons and Vit. A.

IONOL®
2,6-Di-tert-butyl-4-methylphenol
An anti-oxidant for fats, oils and rubber

SHELL CHEMICAL CORPORATION
CHEMICAL PARTNER OF INDUSTRY AND AGRICULTURE
500 Fifth Avenue, New York 18 * 100 Bush Street, San Francisco 6
Boston • Chicago • Cleveland • Detroit • Houston • Los Angeles • Newark • St. Louis

KOPPERS
Di-tert-BUTYL-para-CRESOL

USES: As an antioxidant for transformer oil; as an antioxidant for hydrocarbon materials; as a lubricating oil additive; as a stabilizer of gasoline for the prevention of gum formation; as a non-staining rubber antioxidant; as a stabilizer for insecticidal preparations; as an antioxidant for fats and greases.

BARIUM CHROMATE (Lemon Chrome, Ultramarine Yellow, Baryta Yellow, Steinbuhl Yellow, Gelbin)

$BaCrO_4$. Yellow powd. or cryst. Sp. gr. 4.498. Sol. acids. Uses—mfr. safety match compositions; as pigment in water color paint and varnishes; discharge in printing fabrics; coloring ceramics, porcelains and glass. Grades—tech.; C.P.

J M Baird Co, 147 Nassau St, N Y
*J T Baker Chem Co, Phillipsburg, N J
Barclay Chem Co, 75 Varick St, N Y

BARIUM CYANIDE

$Ba(CN)_2$. Colorless cryst. M.P. 600°C. Sol. water, alcohol. Uses—metallurgical purposes. Poisonous. Grades—tech.

*City Chem Corp, 132 W 22 St, N Y 11
Hummel Chem Co, 90 West St, N Y 6

BARIUM DIOXIDE see Barium Peroxide

BARIUM FLUORIDE

BaF_2. White powd. Sp. gr. 4.828. M.P. 1280°C. Sol. acids, ammonium chloride solution; insol. water. Uses—mfr. embalming fluid, enamels for ceramics. Grades—tech.; C.P.

*J T Baker Chem Co, Phillipsburg, N J
*Baker & Adamson Products, 40 Rector St, N Y
Henry Sundheimer Co, 103 Park Ave, N Y 17

BARIUM FLUOSILICATE

$BaSiF_6$. White powd. Very sl. sol. water. Uses—mfr. insecticides. Grades—tech.

J M Baird Co, 147 Nassau St, N Y
Faesy & Besthoff, 325 Spring St, N Y 13
Henry Sundheimer Co, 103 Park Ave, N Y 17

BARIUM HYDRATE see Barium Hydroxide

BARIUM HYDRIDE

*Metal Hydries, 16 Congress St, Beverley, Mass

BARIUM HYDROXIDE (Barium Hydrate, Caustic Baryta, Baria Hydride)

$Ba(OH)_2.8H_2O$. M.W. 315.5. White or sl. yellowish cryst. Sp. gr. 2.18. M.P. 78°C. B.P. 103°C. Sol. water, alcohol, ether. Uses—mfr. barium salts, boiler compounds, intermediates, organic chemicals; refining fats, oils and sugar; glass ingredient; water softener. Grades—tech., anhydrous powd. or cryst.; C.P.; U.S.P.

J M Baird Co, 147 Nassau St, N Y
*Baker & Adamson Products, 40 Rector St, N Y
Doe & Ingalls, 56 Garden St, Everett Sta, Boston 49, Mass
Faesy & Besthoff, 325 Spring St, N Y 13

BARIUM OXIDE (Porous)

BaO. Specially prepared for drying and dehyrating gases, liq. and solids at temp. to 1000°C. Reacts violently on contact with water. Care should be exercised in handling. Available in lump form or granulated to various mesh sizes.

Amend Drug & Chem Co, 117-119 E 24 St, N Y
*Millmaster Chem Corp, 420 Lexington Ave, N Y 17

BARIUM PERCHLORATE

$Ba(ClO_4)_2$. M.W. 336.27. White crystalline material. L. M.P. 505°C. Sol. water, alcohol. Uses—dehydrating agent.

*Frederick G Smith Chem Co, P O Box 1611, Columbus 16, Ohio

BARIUM PERMANGANATE

$Ba(MnO_4)_2$. M.W. 375.3. Brownish violet crystals; sol. water. Uses—mfr. permanganates, pure permanganic acid; in research. It is more active and less stable than potassium permanganate.

*Carus Chem Co, Box 364, La Salle, Ill

BARIUM PEROXIDE (Barium Binoxide, Barium Dioxide)

BaO_2. Grayish-white powd. Cryst. have formula $BaO_2 \cdot 8H_2O$. Sp. gr. 4.958. M.P. 450°C. Sol. dilute alcohol, acids. Decomp. in water. Uses—mfr. barium salts, oxygen, in Brin's Process for hydrogen peroxide, green light, oxygenated water; primer in alumio-thermic welding; general bleaching agent; bleaching textiles; mordant in dyeing and printing fabrics. Grades—88-90%; tech.; C.P.

BARIUM SULFATE, PRECIPITATED see Blanc Fixe

BARIUM SULFIDE (Barium Monosulfide)

BaS. Grayish-white powd., tech.—brownish-black powd. in lumps. Sp. gr. 4.25 (15°C). Infusible. Decomp. in water. Uses—mfr. barium salts, hydrogen sulfide gas, luminous paints; for producing rich shades of brown coloring on copper; vulcanizing rubber; weighting gutta percha; laboratory reagent; as depilatory. Grades—tech.; C.P.

BASTARD SAFFRON see Saffron, American

BATES, TANNING

Hides and skins are bated first, to remove the free and combined lime, and second, to reduce the swelling of the collagen fibres, caused by the lime, thereby restoring the hides and skins to the required degree of softness or flaccidity. Before the introduction of modern synth. bates, the most commonly used materials were hen, pigeon, and dog dungs. When hen or pigeon dung was used, the process was called bating, and when dog dung was used it was called puering. Value of dung for deliming and falling purposes was caused by its ammonium chloride content and presence of certain enzymes. Artificial bates are usually compounded with a suitable ammonium salt, pancreatic enzymes, and an inert filler.

BATTERY MANGANESE see Manganese Dioxide

*Company classifies itself as manufacturer or producer of this product

PORCEL Hard, highly adsorbent, large-surface-area activated bauxites utilizing either foreign or domestic ores. Supplied in various standard meshes, moisture contents, and in regular, low iron or low silica grades.

Recommended generally as an adsorbent, catalyst and catalyst carrier. Used widely as a lubricating oil and wax percolating medium, vapor phase desulphurization catalyst, aluminum chloride catalyst support and trap, refining medium for sugar liquors, and as an agent for the removal of fluoride contaminants from hydrocarbon streams.

BENZOL (Benzene, Coal Naphtha, Phenyl Hydride, Cyclohexatriene, Pheno)

C_6H_6. M.W. 78.05. Colorless liq. Sp.gr. 0.879 (20° C). M.P. 5.4°C. Flash point 15°C. B.P. 79.6°C. Sol. alcohol, ether; insol. water. Color, min., 2I saybolt. Uses—mfr. phenol, nitrobenzene, synth. drugs and perfumes, phenacetin, antipyrin, salicylic acid, saccharin, intermediates, organic chemicals, indigo dyes, picric acid, shoe polishes, blackings, spreading compounds, splicing solutions, dry cleaning preps., paint removers, airplane dopes, varnishes, lacquers, photographic developers, rubber cements, textile soaps; cleansing textiles; preserving textile sizes; as solvent for and extracting waxes, resins, fats and oils; solvent ink, celluloid and rubber; enriching gas; in cements; degreasing glue stock; solvent in making

BENZIDINE HCl

The Carwin Company specializes in the manufacture of quality intermediates.

Other products include:

Benzidine HCl	Anthranilic Acid
Dichlorbenzidine HCl	Beta hydroxy naphthoic acid
Dianisidine Sulphate	Para hydroxy benzoic acid
Dianisidine Base	Quinizarin
Tolidine HCl	Phthalimide

*Maywood Chem Works, Maywood, N J
Tombarel Products Corp, 12 E 22 St, N Y 10
*Verona Chem Co, 26 Verona Ave, Newark, N J

BENZYL SALICYLATE

HO. C_6H_4. CO_2CH_2. C_6H_5. M.W. 228.10; Colorless, thick, liq., slight, pleasant odor. Sp. gr. 1.175^{30}. B.P. 208°C. Sl. sol. in water; miscible with alcohol or ether. Uses—as fixer in perfumery; in "sun screen."

Dodge & Olcott, 180 Varick St, N Y 14
Florasynth Labs, 1513 Olmstead Ave, N Y 61
*Givaudan-Delawanna, 330 W 42 St, N Y 18
Norda Essential Oil & Chem Co, 601 W 26 St, N Y 1
Polak & Schwartz, 667 Washington St, N Y 14
*R S A Corp, 690 Sawmill River Rd, Ardsley, N Y
Tombarel Products Corp, 12 E 22 St, N Y 10
*Verona Chem Co, 26 Verona Ave, Newark, N J

BENZYL SUCCINATE

$C_7H_7O_2C(CH_2)_2COOH$. M.W. 208.22. Crystalline solid. Sol. alcohol, ether; insol. water. M.P. 59°C. Uses—in medicine as antispasmodic.

Florasynth Labs, 1513 Olmstead Ave, N Y 61
Polak & Schwartz, 667 Washington St, N Y 14
*Seydel Chem Co, 225 Mercer St, Jersey City 2, N J

BENZYL SULFIDE (Dibenzyl Sulfide)

$(CH_2.C_6H_5)_2S$. M.W. 214.17. Colorless plates. M.P. 49°C. Insol. water; sol. alcohol, ether.

*Bios Labs, 17 W 60 St, N Y 23

BENZYL THIOCYANATE

Advance Solvents & Chem Corp, 245 5 Ave, N Y 16
*Hooker Electrochem Co, 4715 Buffalo Ave, Niagara Falls, N Y

BENZYLTRIMETHYLAMMONIUM CHLORIDE

$C_6H_5CH_2(CH_3)_3NCl$. M.W. 196. Sol. water. Uses—catalyst in resin mfr.

*Commercial Solvents Corp, 17 E 42 St, N Y 17
*Rohm & Haas Co, Washington Sq, Phila 5, Pa

BERYL (Beryllium Aluminum Silicate)

A mineral, $3BeO.Al_2O_3.6SiO_2$; hex. grn. Sp. gr. 2.63-2.91; hardens 7.5-8.0; M.P. 1410°C. ±100. Uses—mfr. beryllium and beryllium salts, gem stones (emerald).

Greene Trading Co, 60 Wall St, N Y 5
Wah-Chang Corp, 233 Broadway, N Y 7

BERYLLIUM (Metal)

Be. Non-corrodible, grayish-black metal in hexagonal cryst. Related to magnesium group. Sp. gr. 1.85 (20° C). M.P. 1350°C. Sol. acids, alkalies. Uses—mfr. alloys to impart strength and hardness, particularly aluminum alloys; mfr. beryllium salts.

*Bios Labs, 17 W 60 St, N Y 23
*Bram Chem Co, 820 65 Ave, Phila 26, Pa
*Brush Beryllium Co, 4301 Perkins Ave, Cleveland 3, Ohio
City Chem Corp, 132 W 22 St, N Y 11
Millmaster Chem Corp, 420 Lexington Ave, N Y 17

BERYLLIUM ALUMINUM SILICATE see Beryl

BERYLLIUM CHLORIDE

$BeCl_2$. M.W. 79.93. White cryst. Very deliq. Sp. gr. 1.899 @ 25°C. M.P. 440°C. B.P. 520°C. Sol. water, alcohol, benzene, ether.

*Fairmount Chem Co, 600 Ferry St, Newark 5, N J

BERYLLIUM FLUORIDE (Glucinum Fluoride)

BeF_2. M.W. 47.02. Sp. gr. 1.986. M.P. 800°C.

Brush Beryllium Co, 4301 Perkins Ave, Cleveland, Ohio

BERYLLIUM HYDROXIDE

$Be(OH)_2$. M.W. 43.04. White, amorp. powd. Sol. acids. Uses—beryllium compounds; bonding material and addition agent.

Brush Beryllium Co, 4301 Perkins Ave, Cleveland, Ohio

BERYLLIUM NITRATE (Glucinum Nitrate)

$Be(NO_3)_2$. $3H_2O$. M.W. 187.08. White to sl. yellowish. Very deliq. M.P. 60°C. Decomp. 100°C. Sol. water, alcohol.

Brush Beryllium Co, 4301 Perkins Ave, Cleveland, Ohio

BERYLLIUM OXIDE (Glucinum Oxide)

BeO. M.W. 25.02. Amorp. white powd. Sp. gr. 3.025. Infusible. Insol. water. M.P. 2570°C. Sold either fluffy or preshrunk. Uses—mfr. other beryllium salts. Grades—Commercial.

Brush Beryllium Co, 4301 Perkins Ave, Cleveland, Ohio

BERYLLIUM SULFATE

$BeSO_4$. M.W. 105.08. Small, well-defined, colorless, tetragonal cryst. Uses—binding material in beryllium oxide refractories; in ceramics.

Brush Beryllium Co, 4301 Perkins Ave, Cleveland, Ohio

BETAINE HYDROCHLORIDE (Trimethylglycine Hydrochloride)

$C_5H_{11}O_2N.HCl$. M.W. 153.59.

American Roland Corp, 16 Hudson St, N Y
*Bios Labs, 17 W 60 St, N Y 23
Gane & Ingram, 43 W 16 St, N Y 11

BIACETYL see Diacetyl

BIANILINE see Benzidine

BIANISIDINE see Dianisidine

BIANILINE see Hydrazobenzene

BIBASIC CALCIUM PHOSPHATE see Calcium Phosphate, Dibasic

BICALCIC PHOSPHATE see Calcium Phosphate, Dibasic

BICYCLODECANE see Decahydronaphthalene

BIEBERITE see Cobalt Sulfate

BILIFULVIN see Bilirubin

BILIPHAEIN see Bilirubin

BILIRUBIN (Biliphaein, Bilifulvin, Cholepyrrin, Hematoidin)

Orange-red powd. Insol. water; sol; benzene, chloroform, carbon bisulfide, acids, alkalies, very sol. in alcohol, ether. Uses—organic reagent in analytical chemistry; in medicine.

J M Baird Co, 147 Nassau St, N Y
*Bios Labs, 17 W 60 St, N Y 23

BINDERS, BRIQUETTE

Products of strong adhesive qualities, usually of coal-tar origin, that are employed in the briquetting of coal, charcoal, etc.

*Barrett Div, 40 Rector St, N Y 6
*Clinton Foods, Clinton, Iowa
*Phila Quartz Co, 1168 Public Ledger Bldg, Phila 6, Pa
*Portland Gas & Coke Co, Public Service Bldg, Portland 4, Ore
*Reilly Tar & Chem Corp, 1615 Merchant Bank Bldg, Indianapolis 4, Ind

BINDERS, CORE

Oil preps. that impart strength and cohesion to the sand molds in foundry practice, to provide smoother working in the boxes, quicker drying in the oven, an easier shakeout, a reduction in the gas in the molds, and to prevent crusting.

*Archer-Daniels-Midland Co, Chem Products Div, 2191 W 110 St, Cleveland 2, Ohio
*Armour & Co, 1355 W 31 St, Chicago 9, Ill

*U S Smelting Refining & Mining Co, 57 William St, N Y 5
*Wah-Chang Corp, 233 Broadway, N Y 7

BISMUTH CARBONATE (Bismuth Subcarbonate; Bismuth Carbonate, Basic)

$(Bi_2O_2CO_3)_2 \cdot H_2O$; white, odorless powder; Sp. gr. 6.86 Insol. in water or alcohol; sol. in mineral acids in conce. acetic acid. Uses —in medicine; face powd.

J M Baird Co, 147 Nassau St, N Y
*N Y Quinine & Chem Works, 99 N 11 St, Bklyn 11, N Y

BISMUTH CHLORIDE (Bismuth Trichloride, Bismuthous Chloride)

$BiCl_3$. M.W. 315.37. White, crystalline, deliq. powd. Sp. gr. 4.75. M.P. 230-2°C. B.P. 447°C. Sol. acids; insol. alcohol. Decomp. in water. Uses—mfr. bismuth salts. Grades—C.P.; tech.

J M Baird Co, 147 Nassau St, N Y
*Merck & Co, 100 Lincoln Ave, Rahway, N J
*N Y Quinine & Chem Works, 99 N 11 St, Bklyn 11, N Y

BISMUTH CHLORIDE, BASIC see Bismuth Oxychloride

BISMUTH HYDRATE see Bismuth Hydroxide

BISMUTH HYDROXIDE (Bismuth Hydrate)

$Bi(OH)_3$. M.W. 260. White to yellowish-white amorp. powd. Insol. water; sol. acids.

J M Baird Co, 147 Nassau St, N Y
*Mallinckrodt Chem, 2 & Mallinckrodt Sts, St Louis 7, Mo
*N Y Quinine & Chem Works, 99 N 11 St, Bklyn 11, N Y

BISMUTH IODIDE (Bismuth Triiodide)

BiI_3. M.W. 589.76. Black, heavy powd. Sp. gr. 5.70. M.P. 439° with decomp. Sol alcohol; insol. water. Uses—has been used in syphilis by intraven. injection.

Amend Drug & Chem Co, 117-119 E 24 St, N Y
*N Y Quinine & Chem Works, 99 N 11 St, Bklyn 11, N Y
*R S A Corp, 690 Sawmill River Rd, Ardsley, N Y

BISMUTH IODOSUBGALLATE

Approx. $C_6H_2(HO)_3COO.Bi(OH)I$. M.W. 522. Dark gray, odorless, tasteless, bulky powd. Insol. water, alcohol, ether; sol. in solutions of alkali hydroxide; decomposed by acids. Protect from light. Uses—antiseptic.

Philipp Bauer Co, 2 W 47 St, N Y
Conray Products, 510 6 Ave, N Y 11
*Lamex Chem Corp, 25 Broadway, N Y 4
*N Y Quinine & Chem Works, 99 N 11 St, Bklyn 11, N Y
*R S A Corp, 690 Sawmill River Rd, Ardsley, N Y

BISMUTH NITRATE (Bismuth Trinitrate, Bismuth Ternitrate, Carnot's Reagent)

$Bi(NO_3)_3.5H_2O$. M.W. 485.10. Colorless solid; crystalline. Sp. gr. 2.83. B.P. decomp. at 30 to 80°C. Sol. alcohol, acetone. Uses—mfr. bismuth salts, luminous paints and enamels, bismuth pharmaceuticals; for bismuth lustre on tin. Grades—tech.; U.S.P.; C.P.

*J T Baker Chem Co, Phillipsburg, N J
McKesson & Robbins, 155 E 44 St, N Y 17
*N Y Quinine & Chem Works, 99 N 11 St, Bklyn 11, N Y
Republic Chem Corp, 94 Beekman St, N Y 38

BISMUTH NITRATE, BASIC see Bismuth Subnitrate

BISMUTH OXIDE see Bismuth Trioxide

BISMUTH OXYCHLORIDE (Bismuthyl Chloride, Bismuth Subchloride, Pearl White, Cosmetic Bismuth, Basic Bismuth Chloride, Blanc d' Espagne, Blanc de Perle)

BiOCl. White powd. Sp. gr. 7.717. Melts at red heat. Sol. acids; insol. alcohol, water. Uses—mfr. face powd. toilet articles, artificial pearls; as paint pigment; in medicine. Grades—tech.; C.P.

J M Baird Co, 147 Nassau St, N Y
*J T Baker Chem Co, Phillipsburg, N J
Hawkins Chem Co, 3100 E Hennepin Ave, Minneapolis 13, Minn

BOIL-OFF COMPOUNDS, Rayon

Strictly there is no "boiling-off" of rayon, since no sericin or gum is present; however, some rayon is not delivered by the manufacturer to the dyer in the bleached state, and does contain oils used in twisting, winding, sizing, etc., and fats, etc., employed in mfr., so that the yarn must be scoured thoroughly. See Boil-Off Compounds, Textile; Detergents, Textile.

BOLUS ALBA see Clays, China

BONE ASH

Ash resulting from incineration of bones. Composed chiefly of calcium phosphate. Uses—making cupels used in assaying, for cleaning and polishing preps., ceramics, fertilizers.

*American Agricultural Chem Co, 50 Church St, N Y 7
Barclay Chem Co, 75 Varick St, N Y
Samuel D Keim, Liberty Trust Bldg, Phila 7, Pa
*Merrimac Div, Monsanto Chem Co, Boston 49, Mass
Thompson-Hayward Chem Co, 121 W Pershing Rd, Chicago, Ill

BONE BLACK (Animal Charcoal)—see also Carbon Activated

Black, solid amorp. Sp. gr. 2.7. Uses—mfr. blackings and polishes; decolorizing agent and filtering medium; cementation reagent; absorptive medium in gas masks; paint and varnish pigment; clarifying shellac; decolorizing and deodorizing paraffin and sugar; filtering, decolorizing and deodorizing water. Grades—tech.; various as to uses.

BORNEO CAMPHOR see Borneol

BORNEOL (Borneo Camphor, Bornyl Alcohol Baras Camphor, Malayan Camphor, Sumatra Camphor, Dihydroxy-camphene, Campbanol)

$C_{10}H_{17}OH$. M.W. 154.14. White, solid, amorp. and crystalline, camphor-like odor. Sp. gr. 1.011 (15°C). M.P. 208.6°C. B.P. 213.5°C. Sol. alcohol, ether; very sl. sol. water. Uses—mfr. perfumes, pharmaceuticals intermediates, celluloid, organic chemicals, synth. camphor, borneolesters; in medicine. Grades—tech.; pure.

*Bios Labs, 17 W 60 St, N Y 23
*Magnus, Mabee & Reynard, 16 Desbrosses St, N Y 13

BORON, AMORPHOUS

B; At. Wt. 1082; at No. 5; vol. 3; soft, brown powd. ignites in air. Sp. gr. 2.45. M.P. 2300°C. Unaffected by water, chlorine or bromine at ordinary temp. Sl sol. in water when freshly prepared and not strongly ignited. Uses—as positive pole in galvanic elements thermometers.

*Bios Labs, 17 W 60 St, N Y 23
*Fairmont Chem Co, 600 Ferry St, Newark 5, N J
*Metalsalts Corp, 200 Wargarawe Rd, Hawthorne, N J
*Millmaster Chem Corp, 420 Lexington Ave, N Y 17

BORON FLUORIDE-DIETHYL ETHER COMPLEX see Boron Fluoride Etherate

BORON FLUORIDE ETHERATE (Boron Fluoride-diethyl Ether Complex)

$BF_3:(C_2H_5)_2O$. M.W. 141.90. Straw color to tan liq. Uses—catalyst in polymerization, esterification and alkylation reactions.

*Baker & Adamson Products, 40 Rector St, N Y
*Gen Chem Div, Allied Chem & Dye Corp, 40 Rector St, N Y 6

BORON NITRIDE

*Bios Labs, 17 W 60 St, N Y 23
*Fairmont Chem Co, 600 Ferry St, Newark 5, N J

BORON TRICHLORIDE

BCl_3. M.W. 117. Colorless, fuming liq. Uses—catalyst; refining agent for aluminum, zinc and copper alloys; refrigerant in compression refrigerating machines

Matheson Co, Paragon Div, E Rutherford, N J
*Stauffer Chem Co, 420 Lexington Ave, N Y 17

BORON TRIFLUORIDE

BF_3. M.W. 67.82. Colorless gas. Uses—catalyst

*Baker & Adamson Products, 40 Rector St, N Y
*Gen Chem Div, Allied Chem & Dye Corp, 40 Rector St, N Y 6
Matheson Co, Paragon Div, E Rutherford, N J

BORAX see Sodium Borate

BOROFORM see Acetylene Tetrachloride

BRAKE LINING SATURANTS

Preps. used as a bonding material with the asbestos base brake lining. Requirements are: exceptional strength and heat resistance, good frictional and wearing qualities.

*Durez Plastics & Chem, 5 Walck Rd, N Tonowanda, N Y
*Irvington Varnish & Insulator Co, 17 Argyle Terrace, Irvington 11, N J
*Monsanto Chem Co, Plastics Div, Springfield, Mass
*Portland Gas & Coke Co, Public Service Bldg, Portland 4, Ore

BRASS POWDERS

*New Jersey Zinc Sales Co, 160 Front St, N Y 38

BRAZILWOOD EXTRACT

Extract made from Brazilwood. Uses—dyeing textiles and leather. Grades—tech.

*American Dyewood Co, 285 Madison Ave, N Y

BRAZING COMPOUNDS

Alloys of varying proportions of brass and zinc used as a solder.

*Goldsmith Bros Smelting & Refg Co, 111 N Wabash Ave, Chicago 2, Ill
*T B Hagstoz & Son, 709 Sansome St, Phila 6, Pa
*Linde Air Products Co, 30 E 42 St, N Y 17

BREMEN BLUE see Copper Carbonate, Blue

BREMEN GREEN see Copper Carbonate

*Company classifies itself as manufacturer or producer of this product

BROACHING COMPOUNDS

Specially formulated lubricants used in machine shops, etc., for tapering, boring, smoothing operations, etc.

*Kali Mfg Co, 427 Moyer St, Phila 25, Pa
*Macco Products Co, 525 W 76 St, Chicago, Ill

BROM CRESOL BLUE see Bromcresol Green

BROMINE

Br_2. Reddish-brown, fuming liq. Sp. gr. 3.1883 (0°C). M.P. —7.3°C. B.P. 58.7°C. Sol. water, alcohol, ether, potassium, bromide, alkalies, carbon disulfide. Uses—mfr. bromides, hydrobromic acid, Prussian Blue, poison gases, tetraethyl gasoline dyes, pharmaceuticals; as battery depolarizer; disinfectant of rooms and buildings; oxidizing and brominating agent in making inorganic and organic compounds; extracting gold; in medicine. Grades—C.P.; U.S.P.; tech.

BRUCITE see Magnesium Hydroxide

BRUNSWICK GREEN see Copper Carbonate

BUFFING COMPOUNDS

Compounds applied to the buffs (disks of cloth or similar pliant materials) used in the buffing operation which follows the polishing operation on metals. Buffing usually is classified in two ways "cutting down" and "coloring." For the first, specially processed tripoli or emery and tallow are commonly employed, and for "coloring" aluminum oxide or chromium oxide compounds are popular. Other preps. are specially compounded with tripoli and chromium oxide, with pumice, emery and a machine oil, with soap-bark powder and water, with pumice and a grease-removing solvent; others contain lime.

1,3-BUTYLENE GLYCOL

*Celanese Corp of America, 180 Madison Ave, N Y 16

2-3 BUTYLENE GLYCOL (Butanediol)

$CH_3{\cdot}CHOH{\cdot}CHOH{\cdot}CH_3$. M.W. 90.08. Nearly colorless sol. or liq., hygroscopic. Sp. gr. 1.000 (25°C). B.P. 184°C. M.P. 24°C.-27°C. Miscible with water in all proportion. Refractive Index 1.438 (20°C). Uses—solvent for dyes, has good penetration into wood and textiles, is resistant against alkali, non-resistant against most mineral acids. Forms nitrates with nitric. Forms resins with phthalic anhydride. Grades—99% 2-3 butylene glycol.

*Celanese Corp of America, 180 Madison Ave, N Y 16

3-BUTYN-1-OL (beta-Ethynyl Ethanol)

$HC{\equiv}CCH_2CH_2OH$. M.W. 70.09. Colorless liq. characteristic odor. Uses—organic syntheses, pharmaceuticals, plastics.

*Bios Labs, 17 W 60 St, N Y 23
*Farchan Research Labs, 609 E 127 St, Cleveland 8, Ohio

3-BUTYN-2-OL (Methyl Ethynyl Carbinol)

$HC{\equiv}C{\cdot}C(OH)CH_3$. M.W. 70.1. Colorless liq.; characteristic odor. Uses—organic synthesis, pharmaceuticals, plastics.

*Bios Labs, 17 W 60 St, N Y 23
*Farchan Research Labs, 609 E 127 St, Cleveland 8, Ohio

1-BUTYNE see Ethyl Acetylene

n-BUTYRALDEHYDE

C_4H_8O. M.W. 72.10. Colorless liq. B.P. 75.7°C. Sl. sol. in water; very sol. in organic solvents.

*Tennessee Eastman Co, 10 E 40 St, N Y 16

BUTYRIC ANHYDRIDE

$(C_3H_7CO)_2O$. Liq. B.P. 198.2°C. Sp. gr. .9676 at 20°/20°C. Uses—organic synthesis.

*Carbide & Carbon Chem Co, 30 E 42 St, N Y 17

BUTYRONE see Dipropyl Ketone

BUTYRYL CHLORIDE (Iso)

$(CH_3)_2CH.CO.Cl$. M.W. 106.51. Colorless liq. Sp. gr. at 4mm, 1.017. M.P. —90°C. B.P. 92°C. Sol. ether. Uses—organic synthesis.

Advance Solvents & Chem Corp, 245 5 Ave, N Y 16
*Carbide & Carbon Chem Co, 30 E 42 St, N Y 17

CABLE FILLING COMPOUNDS

Plastic compounds for filling joints to prevent entrance of moisture and to give suitable electric properties. Should be acid and alkali-resistant, possess high waterproofing qualities, excellent adhesive properties, bonding perfectly to metals, porcelain, and glass. Should be extremely flexible.

American Firstoline Corp, 420 Lexington Ave, N Y

AEROCARB® Carburizing Compounds

AEROCASE® Case Hardening Compounds

AEROHEAT® Heat Treating Salts

AMERICAN Cyanamid COMPANY

30 Rockefeller Plaza, New York 20, N. Y.

CARRAGHEEN EXTRACTS (Irish Moss Extract)

Mixture of disulfate esters in which the nucleus is constituted by d-galactose residues; differing only by the cation fixed on the term. sulfate. M.W. depends on degree of polymerization and nature of cation. Uses—stabilizing, bodying and suspending agents, ice cream stabilization, emulsion stab., gelling agents in milk puddings; cosmetics, tooth paste.

*Algin Corp of America, 24 State St, N Y 4
*Krim-Ko Corp, 63 David St, New Bedford, Mass
*S B Penick & Co, 50 Church St, N Y 7
*Phenix Pabst-ett Co, 460 E Illinois St, Chicago 90, Ill

CARRENE see Methylene Chloride

CARRIERS, see individual listings

CARTHAMUS see Saffron, American

CARVACROL (2-Hydroxy-p-Cymene, Isopropyl-o-Cresol)

$C_{10}H_{14}O$. M.W. 150.21. Colorless or yellow liq. thymol-like odor. Uses—disinfectants.

P R Dreyer, 113 W 19 St, N Y
*Givaudan-Delawanna, 330 W 42 St, N Y 18

CASE-HARDENING MATERIALS

Compounds which impart surface hardness to steel through the absorption of carbon during a heating followed by a quenching operation. The basis of case-hardening or carburizing compounds is usually wood charcoal, together with certain so-called "energizers" such as sodium or barium carbonates, cyanides, etc. Many compounds also have oil or other organic binders.

CASEIN (Edible)

White to yellowish amorp. powd. Sp. gr. 1.259. Sol. alkalies, alkaline carbonates, acids. The raw material must be free from harmful ingredients and the product must be manufactured under conditions conforming with food and drug laws. Uses—special foods; baking powd.; massage creams; cosmetics; pharmaceutical caseinates; adhesive in drinking straws and similar food containers; substitute for gelatin; albumen; clarifying wines. Graded according to use.

Albumina Supply Co, 2 Broadway, N Y 4
*Avoset Co, 1530 Spring Garden St, Phila 1, Pa
Industrial Raw Materials Corp, 575 Madison Ave, N Y 22
Innis, Speiden & Co, 117 Liberty St, N Y 6
Republic Chem Corp, 94 Beekman St, N Y 38
*Sheffield Farms Co, Chemurgic Div, Box 630, Norwich, N Y
O J Weeks Co, 16 Hudson St, N Y 13

CASEIN (Inedible)

White to yellowish amorp. powd. Sp. gr. 1.259. Sol. alkalies, alkaline carbonates, acids. Uses—mfr. casein cold water paints and varnishes, waterproofed paints and distempers, paint removers, water-resistant glues and adhesives, shoe polishes, synth. milk linoleum, pharmaceutical caseinates; mordant in dyeing and printing textiles; printing paste thickener; loading and softening silks and cottons; producing high gloss on fabrics; finishing and dressing leather; substitute for gelatin, albumen, shellac, gums, etc.; for various purposes; in celluloid and other plastics; rubber compounds; hard rubber; soaps; photographic films; printing artist's canvas; insulating compositions; bottle sealing compositions; adhesive thickener in insecticides; filler; binder in cork compositions and other plastics; glazing casks. Graded according to use.

HERCULES

CASEIN

(ACID AND RENNET)

For paper coating, adhesives, cold-water paints and plastics.

GMS1-1

HERCULES POWDER COMPANY

978 Market St., Wilmington, Del.

SHEFFIELD

CASEIN

"New Process"—General Industrial Grade
"High pH"—For Emulsions
"High Nitrogen"—Specialty Applications
"De-Vitaminized"—For Vitamin Assays

SHEFFIELD FARMS CO., INC.
CHEMURGIC DIVISION, NORWICH, N. Y.

ATTACLAY

A highly efficient carrier, diluent, extender, and conditioner used in the manufacture of insecticide concentrates, finished dusts, fungicides, wettable powders, rodenticides, herbicides, plant hormone dusts, seed disinfectants and fertilizers.

Produced from the mineral "Attapulgite," an aluminum magnesium silicate, noted for its consistent and compatible composition, large adsorptive capacity, free-flowing characteristics, and low bulk density. Specially processed to insure physical uniformity.

ATTAPULGUS CLAY COMPANY

210 West Washington Square, Philadelphia 5, Pa.

Cable Address: "ATTACLAYCO"

*Company classifies itself as manufacturer or producer of this product

HERCULES

CELLULOSE DERIVATIVES

Nitrocellulose, cellulose acetate, ethyl cellulose, and cellulose gum (CMC—sodium carboxymethylcellulose).

GM51-1

HERCULES POWDER COMPANY
978 Market St., Wilmington, Del.

CELESTIN see Strontium Sulfate

CELLON see Acetylene Tetrachloride

CELLOSOLVE see Ether, Ethylene Glycol Monoethyl

CELLULOSE ACETATE (Acetyl Cellulose)
a. $C_6H_7(COOCH_3)_3$ or b. $C_6H_8O(COOCH_3)_4$ or c. $C_6H_7O_2(COOCH_3)_3$. White, solid, amorp. a. Sol. alcohol. Insol. water. b. Insol. water. c. Insol. water, alcohol, ether. Sol. chloroform, glacial acetic acid, nitrobenzene. Uses—mfr. rayon, airplane dopes, lacquers, varnishes, non-inflam. photographic and moving picture films, rubber compositions, non-shatterable glass, phonograph records, non-inflam, plastics; rending linens non-inflammable; insulating wires and other electrical parts; sizing and finishing material; coating glass to prevent precipita ion of moisture; fireproofing leather; increasing lustre of pearls, molding compositions. Grades—tech.
American-British Chem Supplies, 180 Madison Ave, N Y

CELLULOSE ACETATE PROPIONATE
J M Baird Co, 147 Nassau St, N Y
A Bamberger Corp, 703 Bedford Ave, Bklyn 6, N Y

CELLULOSE, CHEMICAL COTTON
*Hercules Powder Co, 9 & Market Sts, Wilmington, Del

CELLULOSE FLOCK
White, ground-up paper. Uses—filler for compositions such as plastics; other uses similar to paper flock but where color uniformity is specified.
*Brown Co, 500 5 Ave, N Y

CELLULOSE NITRATE (Nitrocellulose)
The esters of cellulose and nitric acid. (tri) $(C_{12}H_{17}O_7(NO_3)_3$. M.W. 459.16. (tetra) $(C_{12}H_{16}O_6(NO_3)_4$. M.W. 504.16. Both esters are white amorp. masses. Density 1.66. Insol ordinary solvents, sol. absolute alcohol, glacial acetic acid. Uses—principal constituent of collodion. (penta) $(C_{12}H_{15}O_5(NO_3)_5$. M.W. 549.16. Density about 1.66. Insol. alcohol, benzene, ether, sol. mixt. alcohol or ether. (hexa) $C_{12}H_{14}O_4(NO_3)_6$. M.W. 594.16. Uses—principal constituent of guncotton; mfr. lacquers. Is a white amorp. substance, density 1.66, ignites about 160°C. Insol. in ordinary solvents.

Kodak

Cellulose Acetate Solutions
Cellulose Acetate Butyrate Solutions
Nitrocellulose Solutions

Filtered solutions of cellulose esters in a wide range of viscosities for formulation into lacquers.

*W Va Pulp & Paper Co, 230 Park Ave, N Y 17

CEMENTS, ACID-PROOF

Preparations resistant to most acids (hydrofluoric is the notable exception) to water, oil, and most solvents. Employed in acid-proof construction, building up metal patterns, cementing tile to aluminum in humidifiers, cementing metal to metal, as a pipe joint compound on underground oil and acid pipe connections, etc.

*Armstrong Co, 241 S Post Ave, Detroit 17, Mich

*Zophar Mills, 116 26 St, Bklyn 32, N Y

CEMENTS, ASBESTOS

Asbestos base cements used extensively in the plumbing and steam fitting trades; in the mfr. of composition flooring, roof coatings, plastic wall finishes, in the mfr. of paints, asphalt compounds, etc.

G & W H Corsen, Plymouth Meeting, Pa
*H B Fuller Co, 255 Eagle St, St Paul 2, Minn
Rocky Mtn Supply Co, 2120 Market St, Denver, Col
Ruberoid Co, 500 5 Ave, N Y 18
*Sauereisen Cements Co, Sauereisen Blvd, Sharpsburg, Pittsburgh, Pa
*Trumbull Asphalt Co of Delaware, 59 & Archer Rd, Summit, Ill

CEMENTS, ASPHALT

A fluxed or unfluxed asphalt specially prepared for direct use in the mfr. of bituminous pavements; and having a penetration at 25°C. of between 5 and 250, under a load of 100 g., applied in 5 seconds (A.S.T.M. Standard Definition).

Asphalt Emulsion Service, 331 Madison Ave, N Y 17
*Atlas Mineral Products Co, 39 Walnut St, Mertztown, Pa
*Barrett Div, 40 Rector St, N Y 6

*Witco Chem Co, 295 Madison Ave, N Y 17
*Zophar Mills, 116 26 St, Bklyn 32, N Y

CEMENTS, BELT

Used to splice leather belting; should possess good resistance to the action of oils, greases, and water. Also see Cements, Rubber for cements used on rubber belts.

*Angier Products, 120 Potter St, Cambridge 42, Mass
*Atlas Adhesives, Leverington Ave & Flat Rock Rd, Phila, Pa
*Atlas Powder Co, Industrial Finishes Dept, Canal & Ludlow Sts, Stamford, Conn
*Compo Chem Co, 150 Causeway St, Boston 14, Mass
*H B Fuller Co, 255 Eagle St, St Paul 2, Minn
E F Houghton & Co, 303 W Lehigh Ave, Phila 33, Pa

CEMENTS, BELT, continued

*Howe & French, Mfg Dept, E Weymouth, Mass
*Merrimac Div, Monsanto Chem Co, Boston 49, Mass
*Polymer Chem Co, 5920 Carthage Ave, Cincinnati 2, Ohio
*Safran Chem & Supply Co, 531-33 Washington St, Lynn, Mass

CEMENTS, BOILER

A sealing compound that permanently and effectively stops air infiltration through boiler settings, cracks, or pores into the combustion chamber to effect fuel economy and protect the boiler setting wall and top from dampness and deterioration.

*Armstrong Co, 241 S Post Ave, Detroit 17, Mich
*Sauereisen Cements Co, Sauereisen Blvd, Sharpsburg, Pittsburgh, Pa

CEMENTS, BOOK BINDERS

Specially prepared for use in binding paper to cloth and leather; for binding leaf-sheaves together; also for binding body of book to back and covers. The higher grades are cold, i.e. cements which are waterproof, remain flexible and will not become tacky in moist weather; will not deteriorate, or attract vermin or worms.

*Alltex Rubber & Chem Co, 400 W 219 St, N Y 34
*Durez Plastics & Chem, 5 Walck Rd, N Tonowanda, N Y
*H B Fuller Co, 255 Eagle St, St Paul 2, Minn

CEMENTS, BRICK

Specialized compounds used as mortar in laying up brick; in smokestacks, in lining acid tanks, recuperators, etc., where concentrations of alkalies or acids are encountered.

*Coplay Cement Mfg Co, Coplay, Pa
*Industrial Chem Specialties Co, P O Box 456, Baytown, Tex
*Kaiser Aluminum & Chem Sales, 1924 Broadway, Oakland 12, Cal

*Quigley Co, 527 5 Ave, N Y 17
*Sauereisen Cements Co, Sauereisen Blvd, Sharpsburg, Pittsburgh, Pa

CEMENTS, BRISTLE SETTING

Cements, usually formulated with synth. resins or rubber, used for setting bristles in brushes to provide a tenacious bond. They should have great durability and excellent resistance to benzene, oils, water and most paint and lacquer thinners. The viscosity of the bristle setting cement should be worked out experimentally in the brushmaker's plant.

*Atlas Adhesives, Leverington Ave & Flat Rock Rd, Phila, Pa
J M Baird Co, 147 Nassau St, N Y
Edward R Dornoff Co, 2400 W Madison St, Chicago 12, Ill

CEMENTS, BUILDERS'

*Atlas Powder Co, Industrial Finishes Dept, Canal & Ludlow Sts, Stamford, Conn
*H Gartenberg & Co, 412 Pershing Rd, Chicago 9, Ill
*Paisley Products, 360 W 51 St, N Y

CEMENTS, ELECTRICAL RESISTING

Pastes or powds. which harden into porcelain or porcelain-type materials, insulate electricity, radiate heat, are resistant to most acids, alkalies, to oil and high temperatures. Replace insulating varnish and enamel mica, asbestos, etc.

*Acme Shellac Products Co, 100 Blanchard St, Newark, N J
*Atlas Mineral Products Co, 39 Walnut St, Mertztown, Pa
*B B Chem Co, 784 Memorial Dr, Cambridge 39, Mass
*Herbert B Morse & Co, 18 Mica Lane, Newton Lower Falls 62, Mass
*Orefraction Inc, 7425 Thomas St, Pittsburgh, Pa
*Sauereisen Cements Co, Sauereisen Blvd, Sharpsburg, Pittsburgh, Pa
*Zophar Mills, 116 26 St, Bklyn 32, N Y

CEMENTS, ENGRAVERS

Preparations used by engravers to mount halftones, zinc plates, etc., to the wooden block. Employed particularly where no shoulders are used that would permit other methods of fastening.

*B B Chem Co, 784 Memorial Dr, Cambridge 39, Mass
Philip A Hunt Co, Palisades Park, N J
*K & L Chem Co, 1052 W 78 St, Chicago 20, Ill
*Lox Mfg Co, 3310 E 31 St, Kansas City, Mo
*Shields Buying Service, 15 Moore St, N Y 4

CEMENTS, FABRIC, CANVAS

Preparations of various ingredients used to join fabrics together in a permanent bond. Should not be seriously affected by oil, water, steam, etc., and remain indefinitely in an elastic state and not crack, chip or crumble.

*Alltex Rubber & Chem Co, 400 W 219 St, N Y 34
American Firstoline Corp, 420 Lexington Ave, N Y
Edward R Dornoff Co, 2400 W Madison St, Chicago 12, Ill

CEMENTS, FILLERS

*American Resinous Chem Corp, 103 Foster St, Peabody, Mass
*Sauereisen Cements Co, Sauereisen Blvd, Sharpsburg, Pittsburgh, Pa

CEMENTS, FILM, PHOTOGRAPHIC

Specialized preparations used to join and repair moving picture film. Newer type cements have a solvent effect on the film providing a more permanent bond. See also Cements, Celluloid.

*Chem Specialties, 29 E Madison St, Chicago, Ill
*Rosco Labs., 367 Hudson Ave, Bklyn 1, N Y
*Schoile Chem Corp, 6641 Ridge Ave, Chicago 26, Ill

CEMENTS, FOUNDRY

Adhesives used in foundry practice to bind parts together. See also Cements, Refractory; Cements, High Temperature.

*Kaiser Aluminum & Chem Sales, 1924 Broadway, Oakland 12, Cal
A T Wagner Co, 2720 Wight St, Detroit 7, Mich
*Westvaco Chem Div, 405 Lexington Ave, N Y 17

CEMENTS, FURNACE

Preparations for setting-up and repairing joints in furnaces, ranges, heaters, and stoves, and for stopping holes in flues and draft pipes. Should be free from gritty particles, work smoothly, and adhere firmly to metal castings, etc.

*Armstrong Co, 241 S Post Ave, Detroit 17, Mich
Buckingham Products Co, 14100 Fullerton Ave, Detroit 27, Mich
*Clinton Metallic Paint Co, Clinton, N Y
*Johns-Manville, 22 E 40 St, N Y 16
*Sauereisen Cements Co, Sauereisen Blvd, Sharpsburg Pittsburgh, Pa
A T Wagner Co, 2720 Wight St, Detroit 7, Mich
*Westvaco Chem Div, 405 Lexington Ave, N Y 17

CEMENTS, GASKET

Preparations used either with or without a gasket to seal metal parts together, particularly the heads of automobile, stationary engines, etc. Must fill the fine pores, imperfections, or unevenness of the parts joined, making the joints permanently tight, and seal effectively against leakage of water, gas, oil, air, steam, and be impervious to acids and alkali.

*Acme Shellac Products Co, 100 Blanchard St, Newark, N J
*Barrett Varnish Co, 1532 S 50 Court, Cicero 50, Ill
*Geo Callahan & Co, Closter, N J
*R M Hollingshead Corp, 840 Cooper St, Camden, N J
*Park Chem Co, 8074 Military Ave, Detroit, Mich
*Polymer Chem Co, 5920 Carthage Ave, Cincinnati 2, Ohio
*Rector Well Equipment Co, 2215 Commerce, Houston, Tex
*Van Cleef Bros, 7800 Woodlawn Ave, Chicago 19, Ill

CEMENTS, GLAZING

Adhesives used to fill scratches and imperfections and to give strong adhesion to parts mended together.

*R M Hollingshead Corp, 840 Cooper St, Camden, N J

CEMENTS, GRAPHITE

Adhesives formulated with graphite, often in the colloidal form. Uses—on gaskets, etc.

*Atlas Mineral Products Co, 39 Walnut St, Mertztown, Pa
*National Carbon Co, 30 E 42 St, N Y 17

CEMENTS, INSULATING

Products formulated from mineral wool base, expanded vermiculite base, asbestos fibre and binder, or other materials and used principally for insulation purposes on irregular surfaces where it would be impracticable to apply sectional insulation, sheets or blocks. Used extensively by the steam-fitting and plumbing trade for insulation and finishing heating boilers and pipe fittings, etc.

*Acme Shellac Products Co, 100 Blanchard St, Newark, N J
Anderson-Stolz Corp, 1731-33 Walnut St, Kansas City, Mo
G & W H Corson, Plymouth Meeting, Pa
*Johns-Manville, 22 E 40 St, N Y 16
*Quigley Co, 527 5 Ave, N Y 17
Rocky Mtn Supply Co, 2120 Market St, Denver, Col
Ruberoid Co, 500 5 Ave, N Y 18
*Westvaco Chem Div, 405 Lexington Ave, N Y 17
*Zophar Mills, 116 26 St, Bklyn 32 N Y

CEMENTS, LABORATORY

General utility products finding wide application in laboratories for mending and repairing glass to glass, glass to metal, rubber to metal or glass, porcelain ware, etc.

Arthur S La Pine & Co, 121 W Hubbard St, Chicago 10, Ill
*Varnition Co, 416 N Varney, Burbank, Cal

CEMENTS, LAMP BASING

Cements used to set electric light bulbs in their bases. Cements of this type are also employed for basing radio and other electronic tubes.

*Acme Shellac Products Co, 100 Blanchard St, Newark, N J
*Borden Co, 350 Madison Ave, N Y 17
*Durez Plastics & Chem, 5 Walck Rd, N Tonowanda, N Y
*Westvaco Chem Div, 405 Lexington Ave, N Y 17

CEMENTS, LINOLEUM

*American Resinous Chem Corp, 103 Foster St, Peabody, Mass
*Armstrong Cork Co, Liberty & Mary Sts, Lancaster, Pa
*Atlas Adhesives, Leverington Ave & Flat Rock Rd, Phila, Pa
*Benjamin Foster Co, 4635 W Girard Ave, Phila 31, Pa

CEMENTS, MAGNESIUM OXIDE

*Mich Chem Corp, 500 N Bankson St, St Louis, Mich
*Westvaco Chem Div, 405 Lexington Ave, N Y 17

CEMENTS, OIL-PROOF

Adhesives with the property of sustained resistance to action of oil, gasoline, gasoline and oil fumes, etc., and finding such representative uses as cement for gaskets used in hosing, etc.

*Atlas Adhesives, Leverington Ave, & Flat Rock Rd, Phila, Pa
*Geo Callahan & Co, Closter, N J
Hyde & Bates, 17 John St, N Y 38
*Lox Mfg Co, 3310 E 31 St, Kansas City, Mo
*Paisley Products, 630 W 51 St, N Y

CEMENTS, OIL-PROOF, continued

*Rector Well Equipment Co, 2215 Commerce, Houston, Tex
*Westvaco Chem Div, 405 Lexington Ave, N Y 17
*Zophar Mills, 116 26 St, Bklyn 32 N Y

CEMENTS, PLASTIC

Formulated with heavy, weather-resisting asphalt and asbestos fibers to an easy troweling consistency. Used for repairing leaky seams, cuts or holes in roofs and for flashing.

*Adhesive Products Corp, 1660 Boone Ave, N Y
*Alltex Rubber & Chem Co, 400 W 219 St, N Y 34
American Firstoline Corp, 420 Lexington Ave, N Y

*Trumbull Asphalt Co of Delaware, 59 & Archer Rd Summit, Ill
*Union Bay State Chem Co, 491 Main St, Cambridge 42, Mass
*Varnitон Co, 416 N Varney, Burbank, Cal
*Zophar Mills, 116 26 St, Bklyn 32, N Y

CEMENTS, PLASTIC, COAL TAR

Asphalt Emulsion Service, 331 Madison Ave, N Y 17
*Barrett Div, 40 Rector St, N Y 6
*Coopers Creek Chem Corp, 98 River Rd, W Conshohocken Pa
*Portland Gas & Coke Co, Public Service Bldg, Portland 4, Ore
Ruberoid Co, 500 5 Ave, N Y 18

CEMENTS, PYROXYLIN

Solvents possessing the property of softening cellulose nitrate plastics without completely dissolving them. Body cements containing cellulose nitrate, plasticizers and solvents are compounded which will cause cellulose nitrate plastics to adhere to other bodies.

*Alltex Rubber & Chem Co, 400 W 219 St, N Y 34
*Atlas Powder Co, Industrial Finishes Dept, Canal & Ludlow Sts, Stamford, Conn
*Bell Chem Co, 25 W 44 St, N Y 18
*Compo Chem Co, 150 Causeway St, Boston 14, Mass
Howe & French, Mfg Dept, E Weymouth, Mass
*Hughes Glue Co, 3500 St Aubin Ave, Detroit 7, Mich
*Lacquer Specialties, 249 Ave P, Newark 5, N J
*Lox Mfg Co, 3310 E 31 St, Kansas City, Mo
*Monsanto Chem Co, Plastics Div, Springfield, Mass
*Paisley Products, 630 W 51 St, N Y

CEMENTS, REFRACTORY

Preparations which assume a cold air set of extreme hardness at atmospheric temperatures, or may be baked. Uses—in making electric heating elements, coating resistors; on brick and concrete surfaces as a slurry; as a refractory coating, filling the pores, crevices and irregular surfaces; for lining furnaces.

Anderson-Stolz Corp, 1731-33 Walnut St, Kansas City Mo
*Armstrong Cork Co. Liberty & Mary Sts, Lancaster, Pa
*Bay State Abrasive Products Co, Westboro, Mass
*Botfield Refractories Co, Swanson & Clymer Sts, Phila Pa
T & W H Corson, Plymouth Meeting, Pa
*E F Drew & Co, 15 E 26 St, N Y 10
*Ironton Fire Brick Co, Box 124, Ironton, Ohio
*Johns-Manville, 22 E 40 St, N Y 16
Keystone Refractories Co, 120 Liberty St, N Y 7
*Orefraction Inc, 7425 Thomas St, Pittsburgh, Pa
*Quigley Co, 527 5 Ave, N Y 17
Ruberoid Co, 500 5 Ave, N Y 18
*Westvaco Chem Div, 405 Lexington Ave, N Y 17

CEMENTS, ROOFING

Uses—on roofs; for gutters, flashings, chimneys, pipes, vents, watertroughs, skylights, downspouts, etc.

*American Tar Co, Ft Wallingford Ave, Seattle 3, Wash

TAM
ZIRCONIUM TITANIUM PRODUCTS
Registered U. S. Pat. Off

*TAM Zircon Electrical Insulating Cements
used in strip heaters, hot plates, flat irons, etc., exhibit high electrical resistance and excellent working properties.
*Registered Trade Mark

TITANIUM ALLOY MANUFACTURING DIVISION
NATIONAL LEAD COMPANY
Office: 111 Broadway, N. Y. C. Plant: Niagara Falls, N. Y.

*Trumbull Asphalt Co of Delaware, 59 & Archer Rd, Summit, Ill
*Zophar Mills, 116 26 St, Bklyn 32, N Y

CEMENTS, RUBBER

1. As binders until sewing or clamping is accomplished; 2. As permanent bonds; 3. As vulcanized seals. Rubber cements are used in shoe-mfr., by automotive manufacturers for assembling upholstery, as sound deadeners, in the mfr. of pocket-books, impregnation of paper and wood fiber, for repairing tires and tubes, in balloon cements, in fastening linings to insides of tank cars, in securing rubber insulators to metal supports, etc. Laytex cements are employed in fabricating carpets, for making mohair fabrics, for fastening the long hairs in haircloth used in lapels of coats, for the rubber setting of brushes; and for binding purposes in brake-lining compounds.

*Van Cleef Bros, 7800 Woodlawn Ave, Chicago 19, Ill

CEMENTS, RUBBER TILE

Specialized cements used for bonding rubber tile flooring to the under surface and the individual tiles to each other.

*Armstrong Cork Co, Liberty & Mary Sts, Lancaster, Pa
*Atlas Adhesives, Leverington Ave & Flat Rock Rd, Phila, Pa
*Benjamin Foster Co, 4635 W Girard Ave, Phila 31, Pa
New England Chem Co, 486 Boylston St, Boston 16, Mass
*Polymer Chem Co, 5920 Carthage Ave, Cincinnati 2, Ohio
*Rubba Inc, 1015 E 173 St, N Y

CEMENTS, SULFUR

Preparations with a sulfur base, combined with other ingredients and used generally as a joint compound: melt and pour easily, possess high tensile and compression strength, resist acids, water, oil, and show good adhesion to metal, brick, tile, etc. Uses—for caulking joints on cast iron, assembling porcelain insulators, sealing bolts, screws in electrical appliances and equipment, in acid-proof construction, etc.

*Atlas Mineral Products Co, 39 Walnut St, Mertztown, Pa
*Electro Chem Supply & Engrg Co, 750 Broad St, Emmaus, Pa
*Maurice A Knight, P O Box 111, Akron 6, Ohio
*Nukem Products Corp, 111 Colgate Ave, Buffalo 20, N Y

CHEMICALS — PER-CHEMICAL GFS PRODUCTS — APPARATUS

CERIC AND CEROUS COMPOUNDS

THE G. FREDERICK SMITH CHEMICAL COMPANY
COLUMBUS, OHIO

VERITAS TAMETSI CAELA CADANT

CEMENTS, TRANSPARENT

Specialized adhesives that give a transparent, non-staining, binding and protective coating for such products as cement, brick, wood, plaster, metals, fabrics, china, paper, etc.

*Adhesive Products Corp, 1660 Boone Ave, N Y
*Atlas Adhesives, Leverington Ave & Flat Rock Rd, Phila, Pa

CHALK PRECIPITATED see Calcium Carbonate

CHANNEL BLACK see Carbon Black

CHARCOAL (Wood Charcoal, Vegetable Charcoal—see also Bone Black)

Black, amorp. solid. Sp. gr. 1.75-2.10. Sublimes at 3600°C. Insol. all common solvents, acids, alkalies. Uses—mfr. calcium carbide, charcoal iron, military gas masks, arc light electrodes, crayons, heating insulating compositions, paint colors, candle wicks; pigment colors, paints, glass, black powd., nitroglycerin and nitrocellulose explosives; chemical catalyst; general decolorizing and filtering medium in chemical processes; precipitant in chemical processes; volatile solvent absorbent; gas absorbent in cold storage, absorbent gas, casing-head gasoline and perfume products; decolorizing and deodorizing fats and oils; purifying water and deodorizing sewage; deodorant in breweries; case-hardening steel; fuel in forges; soil disinfectant; laboratory reagent; in refining alcohol and sugar; horticulture; poultry farming. Grades—Wood (willow, oak, pine, etc.) sticks; lump; powdered; tech.; U.S.P.; animal (bone black); powdered.

CHARCOAL (Activated)

Form of carbon having a high adsorptive capacity for foreign molecules. Extent of adsorptive power depends upon size of capillaries of the charcoal and the size and chemical properties of the molecules to be adsorbed. Den.—when free from impurities is about 2.1. Chemical composition varies with source, may range from 10%-98% carbon. Uses—air purification by removal of gases; decolorizing; catalysts; gas-mask-canister filling; production

CHARCOAL, continued

of high vacuum; medical remedy for cholic and diarrhea as germicide; solvent recovery; gasoline recovery from natural gas; benzene recovery from manufactured gas.

Mallinckrodt®

ANALYTICAL REAGENTS ARE BETTER SIX WAYS

- They're of unsurpassed purity
- they're uniform
- they're precision manufactured
- they're proved
- they save you time and money

—and, most important

- they're immediately available from the stocks of more than 73 conveniently located distributors.

If speed is important, phone your distributor and your order will be on its way today.

Quality Fine Chemicals

Contract Manufacturing for the Chemical Industry

The Edwal Laboratories, Inc., has a specialized department for the confidential manufacture of pilot plant and commercial quantities of fine chemicals and formulations on contract.

An experienced staff of chemists and chemical engineers supervises all phases of this work . . . from research through production for the market in bulk or packaged under your private label.

Contract arrangements are flexible and are carried out in accordance with your needs. All work is confidentially handled and patent rights protected.

This special contract service is used by many nationally known companies. Write for full details.

Winking at a pretty girl in the dark

That's just the same as trying to do business without advertising.

You know what you're doing-but nobody else does . . .

If *your* market is the chemical process industries, advertising in the CW Buyers Guide can help you sell.

And it's economical, basic, long-life.

We'll be glad to tell you what you can do to put more surge in your sales curve.

■ ***Just write, telephone or wire:***

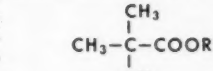
ORGANIC CHEMICALS FROM ROHM & HAAS

Produced in commercial quantities

OCTYLPHENOL

OCTYLPHENOXYETHANOLS

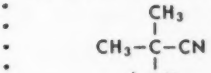
$C_8H_{17}C_6H_4(OC_2H_4)_xOH$
(x = 1, 3, or 5)



DIMETHYLAMINOETHANOL
(50% aqueous solution)

$(CH_3)_2NCH_2CH_2OH$

CAPRYL ALCOHOL
(2-octanol)



HYDROXYISOBUTYRATE ESTERS

(R = C_2H_5, n-C_6H_{13}, n-$C_{12}H_{25}$)

ACETONE CYANOHYDRIN

SEBACIC ACID

$HOOC(CH_2)_8COOH$

ETHYLENE CYANOHYDRIN

$HOCH_2CH_2CN$

For samples, prices and literature on any of these chemicals, please write to Rohm & Haas Company, Dept. BG, Washington Square, Philadelphia 5, Pa.

MONSANTO CHEMICALS FOR RUBBER

Antioxidants

Flectol* H (Condensation product of acetone and aniline)
Santoflex* B (Reaction product of acetone and para-aminobiphenyl)
Santoflex BX (Constant composition blend of Santoflex B and N,N'-Diphenyl-para-phenylenediamine)
Santoflex 35 (Same composition as Santoflex BX but with higher N,N'-Diphenyl-para-phenylenediamine content)
Santowhite* MK (An alkylated phenol sulfide) (Liquid)
Santowhite Crystals (An alkylated phenol sulfide) (Crystalline powder)

Thiazole Accelerators

Santocure* (N-Cyclohexyl-2-benzothiazole-sulfenamide)
El-Sixty* (Di-benzothiazyl-dimethylthiol-urea)
Mertax (2-Mercaptobenzothiazole) (purified)
Ureka* Base (2,4-dinitrophenyl thiobenzothiazole)
Ureka C (Benzothiazyl thiobenzoate)
Thiotax (2-Mercaptobenzothiazole)
Thiofide* (Benzothiazyl disulfide)

Aldehyde Amine Accelerators

A-32 (Reaction product of butyraldehyde and butylidene aniline)
A-77* (Condensation product of acetaldehyde and aniline)
A-100 (Aldehyde derivative of a Schiff's base made with use of both butyraldehyde and acetaldehyde)

Guanidine Accelerators

DPG (Diphenylguanidine)
Guantal* (Reaction product of diphenylguanidine and phthalic acid)

Ultra Accelerators for Latex, Etc.

R-2 Crystals (Reaction product of carbon bisulfide with methylene dipiperidine)
Pip Pip (Piperidine N-Pentamethylene-dithiocarbamate)
Ethyl Thiurad* (Tetraethyl-thiuram-disulfide)
Mono Thiurad (Tetramethyl-thiuram-monosulfide)
Thiurad (Tetramethyl-thiuram-disulfide)
Methasan* (Zinc salt of dimethyl dithiocarbamic acid)
Ethasan* (Zinc salt of diethyl dithiocarbamic acid)
Butasan* (Zinc salt of dibutyl dithiocarbamic acid)

Special Materials

A-1 (Thiocarbanilidine) **Insoluble Sulfur 60**
Retarder ASA
Santovar* A (An alkylated polyhydroxy phenol)
Santovar O (An alkylated polyhydroxy phenol)

Also Colors, Reodorants, Wetting Agents and Plasticizers

why users choose

WELSBACH OZONE

More than a quarter century of ozone engineering "know-how" is at your service when you choose dependable and economical Welsbach Ozone. As Pioneers in ozone research ... research which has made low-cost ozone a reality... Welsbach engineers stand ready to help you with your ozonation problems at any time you call. And 75 years of company existence assures you that those same Welsbach engineers who are here today will be here tomorrow to help you ... in new applications of ozone ... in servicing Welsbach Ozonators ... or in bringing present equipment up-to-the-minute. Write now for the Welsbach catalog folder, "A Square Peg in a Square Hole."

Opalco Lab, 20 E Pittsburgh Blvd, McKeesport, Pa
Whittaker, Clark & Daniels, 260 W Broadway, N Y 13

CHLORMETACRESOL see Chlorocresol

CHLOROACETALDEHYDE

$ClCH_2CHO$. M.W. 78.5. Colorless liq. Sp. gr. 1.203. Uses—syntheses, due to its having a strong aldehyde reaction and a replaceable chlorine atom.

*Dow Chem Co, Midland, Mich

CHLOROACETAMIDE

$ClCH_2CO.NH_2$. M.W. 93.50. White cryst. M.P. 118-119°C. B.P. about 225° with decomposition. Sol. 10 water, 10 absolute alcohol; sl. sol. ether.

J M Baird Co, 147 Nassau St, N Y
*Chem Development Corp, Endicott St, Danvers, Mass
*Fairmount Chem Co, 600 Ferry St, Newark 5, N J

o-CHLOROACETOACETANILIDE

$CH_3COCH_2CONHC_6H_4Cl$. M.W. 211.65. White, crystalline solid. M.P. 107°C. Insol. in water. Uses—mfr. azo dyes, including Hansa colors; intermediate in organic synthesis.

*U S Industrial Chem, 60 E 42 St, N Y
Whittaker, Clark & Daniels, 260 W Broadway, N Y 13

CHLOROACETONE

CH_2COCH_2Cl. Chloroacetone contains an active ketone group and an extremely reactive chlorine atom. It finds application in the synthesis of many products such as pharamaceuticals, dyes, and other organic compounds. For example, Chloroacetone reacts readily with amines to form acetonyl-amines, with glycols to form chlorodioxolanes, with mercaptans to form sulfides or sulfur ethers, and with potassium formate to form acetol. Its purity is 85% to 90%, the remainder consisting almost entirely of unsymmetrical dichloroacetone. Chloroacetone is a very powerful lachrymator and will blister the skin on contact. Adequate precautions should therefore be taken in handling this product. Properties: B.P. 119°C at 760 mm. of mercury (pure material). Flash point, 42.2° C. (108°F). Sp. gr. 1.165 at 20°C/20°C. Wt. per U.S. gallon, 9.69 lbs. at 68°F. Refractive index, 1.4324 at 20°C. Coefficient of cubical expansion, 0.00110 per °C, 0.00061 per °F. Odor, strong, irritating (lachrymatory).

Dickerson Co, Drexel Bldg, Phila 6, Pa
Whittaker, Clark & Daniels, 260 W Broadway, N Y 13

CHLOROACETOPHENONE (Phenacyl Chloride)

$C_6H_5COCH_2Cl$. M.W. 154.51. M.P. 59°C. Moisture less than 0.2%. Light brown crystalline solid. Uses—tear gas in cartridges, grenades and candles. Effective in concentrations as low as one part in three million of air. Grades—tech.

*Bios Labs, 17 W 60 St, N Y 23
*Dow Chem Co, Midland, Mich
Whittaker, Clark & Daniels, 260 W Broadway, N Y 13

CHLOROACETYL CHLORIDE

$CH_2Cl.COCl$. M.W. 112.9. Clear, colorless liq. with sharp odor. Very irritating to eyes and mucous membranes. Sp. gr. 1.459 at 0/4°. Wt. per gal. 12.5 lbs. at 0°C. B.P. 105.0 to 106.0°C. Decomp. in water and alcohol. Uses—mfr. chloracetophenone; in organic syntheses.

*Dow Chem Co, Midland, Mich
*Matheson Co, Paragon Div, E Rutherford, N J

o-CHLORO-p-NITRANILINE (2-Chlor 4 Nitroaniline)

$ClC_6H_3(NO_2).NH_2$. M.W. 172.5. Yellow cryst. solid. Sol. in most organic solvents; insol. water. M.P. above 107.0°C. Uses—as a dye intermediate.

*Dow Chem Co, Midland, Mich
Filo Color & Chem Corp, 202 E 44 St, N Y
*Sherwin-Williams Co, 100 Park Ave, N Y 17

p-CHLORO-o-NITRANILINE (4-Chlor-2-Nitraniline)

$ClC_6H_3NO_2NH_2$. M.W. 172.46. Bright orange finely ground powd. M.P. 116°C. Uses—intermediate in the mfr. of dry colors and dyestuffs.

*Dow Chem Co, Midland, Mich
Filo Color & Chem Corp, 202 E 44 St, N Y
*Verona Chem Co, 26 Verona Ave, Newark, N J

1-CHLORO-1-NITROETHANE

CH_3CHNO_2Cl. M.W. 109.52. Uses—solvent for fats and waxes; antigelling agent for rubber cement.

*Commercial Solvents Corp, 17 E 42 St, N Y 17

1-CHLORO-1-NITROPROPANE

$CH_3CH_2CHNO_2Cl$. M.W. 123.54. Miscible with most organic solvents. Uses—solvent for fats and waxes; antigelling agent for rubber cement.

*Commercial Solvents Corp, 17 E 42 St, N Y 17

2-CHLORO-2-NITROPROPANE

$CH_3CNO_2ClCH_3$. M.W. 123.54. Miscible with most organic solvents. Uses—solvents for fats and waxes; anti-gelling agent for rubber cement.

*Commercial Solvents Corp, 17 E 42 St, N Y 17

1-CHLOROPENTANE see n-Amyl Chloride

CHLOROPANOL see Propylene Chlorohydrin

o-CHLOROPHENOL

C_6H_5OCl. M.W. 128.53. Yellow or brown liq. Dist. limits 173.0° to 177.0°C. Sp. gr. 1.265 at 15.5°C. Wt. per gal. 10.5 lbs. approx. Uses—mfr. alizarines, pyrocatechol, in organic synthesis. Ship. Class.—dye intermediate. Ship. req.—Poison (label required).

*Dow Chem Co, Midland, Mich
*Monsanto Chem Co, Organic Chem Div, 1700 S 2 St, St Louis 4, Mo

CHROMIUM BROMIDE (Chrome Bromide)

$CrBr_3 6H_2O$. M.W. 399.85. Dark greenish-black, very deliq. cryst. Sol. 0.5 water, alcohol, insol. ether.

*Mich Chem Corp, 500 N Bankson St, St Louis, Mich

CHROMIUM CARBONATE (Chromic Carbonate)

A basic carbonate, containing 50-55% chromium 73-80% CrO_3. Grayish-blue powd. Insol. water; sl. sol. water containing CO_2; sol. in mineral acids.

J M Baird Co, 147 Nassau St, N Y
*J T Baker Chem Co, Phillipsburg, N J

CHROMIUM CHLORIDE (Chromic Chloride, Chromium Sesquichloride)

$CrCl_3$. Greenish, crystalline powd. Sp. gr. 2.757 (15°C). B.P. 1200-1500°C. Sl. sol. hot water, sol. water in presence of trace chromous chloride. Sublimes to form chromium sesquichloride. Used as a catalyzer. Uses—mfr. chromium salts; catalyst in making intermediates and organic chemicals; mordant in dyeing and printing textiles; finishing leather; electroplating chromium. Grades—tech.; C.P.

J M Baird Co, 147 Nassau St, N Y
*J T Baker Chem Co, Phillipsburg, N J
*Baker & Adamson Products, 40 Rector St, N Y
*Glover M Birk, Monon & Lincoln Aves, New Albany, Ind
Harwick Standard Chem Co, 60 S Seiberling St, Akron 5, Ohio

CHROMIUM FLUORIDE (Chromic Fluoride)

$CrF_3.4H_2O$. Green crystalline powd. Sp. gr. 3.78. Decomposes on heating. Sol. water, acids. Uses—mordant in dyeing and printing textiles; pigment in coloring marble; hardening stone. Grades—cryst. (33% Cr_2O_3); solution (11% Cr_2O_3); tech., C.P.

DILUEX

This inert and compatible diluent has been successfully used for years in insecticides, fungicides, and fertilizers. Improves the dusting and flow of dry mixtures, disperses rapidly in water without lumping, makes for wide coverage, and has excellent adhesive quality. Gives full support to toxic ingredients. Samples and data on request.

CLAYS, CRUCIBLE

A particular type of Ball Clay, capable of withstanding extremely high temps. Uses—in the mfr. of various types of crucibles.

*English China Clays Sales Corp, 551 5 Ave, N Y 17
*United Clay Mines Corp, Prospect & Oakland Sts, Trenton 6, N J

CLAYS, CRUDE POT

A highly refractory clay, used almost exclusively in the mfr. of glass pots which in turn are used in the mfr. of glass.

*United Clay Mines Corp, Prospect & Oakland Sts, Trenton 6, N J

CLAYS, ENAMELERS'

Clays which are rather plastic and "fatty"—must be capable of floating the non-plastic enamel ingredients. This type of clay should be extremely pure and free from carbonates. There are several uses for this clay in enamels, one, for the ground coat, the other, the finishing coat. During the past few years a combination of domestic clays, including a very pure Florida clay has become very popular with the enameling industry.

CLAYS, POTTERY-MAKERS

Clay used by mfr. of pottery—can be either the China Clay type or the Ball Clay type inasmuch as both types are used extensively by the pottery mfr. However, the term pottery clay usually applies to the plastic ball clay type.

EST. 1848

CLAYS, PULVERIZED-AIRFLOATED

The term given to clays (regardless of what type) which have been properly dried (to approx. 2%) then put through an Airfloating Mill. The term "Airfloated" usually applies to the milled clay which, after being extremely finely pulverized is blown by a blast of air upward to the hopper—hence the term "Airfloated" because it is "floated" in the air.

CLAYS, RUBBER-MAKERS'

Generally a white grit free domestic china clay, having some very definite functions when introduced in a rubber compound to perform—a good Rubber Clay should lend a certain stiffening to the finished product—it should

*Company classifies itself as manufacturer or producer of this product

CLAYS, RUBBER-MAKERS, continued

have the ability to mix with the crude rubber very readily, and when used should become absolutely "part" of the compound itself. All china clays are NOT necessarily good rubber clays, and about the only true method of determining one clay from another is by actual test, because the majority of china clays are not suitable for rubber due to the fact that they make for soft "flabby" products, rather than stiff, compact products.

Whittaker, Clark & Daniels, 260 W Broadway, N Y 13
Witco Chem Co, 295 Madison Ave, N Y 17

CLAYS, SAGGER

This type of clay is usually made up of two or more tough plastic clays, one of the clays being rather strong tight burning and of the Ball Clay type, while the other should be rather open burning and refractory. The use of a Sagger Clay is for the making of receptacles in which ceramic products are placed when they are being fired or "cooked"—a Sagger in the pottery occupies the same position as a cooking-pot does in the kitchen.

*Ky Clay Mining Co, Mayfield, Ky
*United Clay Mines Corp, Prospect & Oakland Sts, Trenton 6, N J
Whittaker, Clark & Daniels, 260 W Broadway, N Y 13

CLAYS, TEXTILE

An unusually smooth grit free white domestic or imported china clay—having certain suspending properties. However, the most important factor is the amount of silica and grit contained—this is because the clay is used in the mfr. of certain types of cotton cloth and also as an ingredient in delusterizing baths for the rayon goods.

CLEANERS, BOILER-TUBE

Used to remove and prevent scale and rust in boiler tubes by neutralizing the sol. salts in the feedwater (largely carbonates of calcium and magnesium), precipitating them out of solution in form of colloidal sludge, which may be expelled from the boiler when it is "blown down." Ingredients include sodium silicate, trisodium phosphate, tannins, soda ash, sodium chromate, sodium alginate, starch, glucose, graphite, kerosene, barium compounds, etc.

*Merrimac Div, Monsanto Chem Co, Boston 49, Mass
*Monsanto Chem Co, Plastics Div, Springfield, Mass
*Zophar Mills, 116 26 St, Bklyn 32, N Y

COATINGS, CANVAS

Special coatings used on canvas, boat covers, awnings, etc., to preserve by preventing mold and by waterproofing; to revivify old materials. Supplied also in the form of paint where color is required.

*Alkydol Labs, 3242 S 50 Ave, Cicero 50, Ill
American Firstoline Corp, 420 Lexington Ave, N Y
Edward R Dornoff Co, 2400 W Madison St, Chicago 12, Ill
*Merchants Chem Co, 60 E 42 St, N Y 17
*Warwick Chem Co Div, Wood River Junction, R I
*Zophar Mills, 116 26 St, Bklyn 32, N Y

COATINGS, CEMENT

Compounds used to decorate and seal the pores of and to waterproof stucco, concrete and cement, and to decorate unsightly stained surfaces. See also Paints, Cement.

*Adhesive Products Corp, 1660 Boone Ave, N Y
*Angier Products, 120 Potter St, Cambridge 42, Mass
*Euclid Chem Co, 1534 Hayden Ave, E Cleveland 12, Ohio
Harwick Standard Chem Co, 60 S Seiberling St, Akron, Ohio
*Merchants Chem Co, 60 E 42 St, N Y 17
*Merrimac Div, Monsanto Chem Co, Boston 49, Mass
*Phila Quartz Co, 1168 Public Ledger Bldg, Phila 6, Pa
*Stewart Chem Products Co, Longmont, Col
*Sullivan Co, 212 E Tregg Ave, Memphis, Tenn
*Timeproof Paint Products, 40 Richard St, Bklyn 31, N Y

COATINGS, CONDUCTIVE

*Acheson Colloids Corp, 1635 Washington Ave, Port Huron, Mich

COATINGS, CONDUCTIVE, continued

*E I Du Pont de Nemours & Co, Electrochem Dept, Wilmington 98, Del
*Pierce & Stevens, 710 Ohio St, Buffalo 3, N Y
*R T Vanderbilt Co, 230 Park Ave, N Y

COATINGS, FIREPROOF

*Baltimore Paint & Color Works, 150 S Calverton Rd, Baltimore 23, Md
*Benjamin Foster Co, 4635 W Girard Ave, Phila 31, Pa
*Johns-Manville, 22 E 40 St, N Y 16
*Sherwin-Williams Co, 100 Park Ave, N Y 17
*Western States Lacquer Co, 4400 E Washington Blvd, Los Angeles, Cal
*Zophar Mills, 116 26 St, Bklyn 32, N Y

COATINGS, FLEXIBLE (for Rubber, Textiles, Leather, Paper)

Various rubber, pyroxylin or other cellulose compositions, synth. resins, gums, waxes, etc. which give to finished goods surface protection, improved appearance, water, oil, gas, and chemical resistance, resiliency, flexibility, ease of cleaning, longer wear, etc.

*Acme Shellac Products Co, 100 Blanchard St, Newark, N J
*Alkydol Labs, 3242 S 50 Ave, Cicero 50, Ill
*American Anode, 60 Cherry St, Akron 8, Ohio
*American Resinous Chem Corp, 103 Foster St, Peabody, Mass

COBALT (Metal)

Co. Steel-gray, malleable, magnetic metal. Sp. gr. 8.5-8.9. M.P. 1480°C. Sol. acids. Uses—mfr. cobalt salts, inks, paint and artists colors, filaments for electric lamps, liq. dryers; catalyst in hardening oils; chemical catalyst and oxidizing agent; alloys in alloy steels; various metallurgical purposes; boiling linseed oil; coloring potteries, porcelains and glass; electroplating. Grades—tech. containing more or less nickel and iron; pure cobalt "shot" (granules about 98% Co).

American Firstoline Corp, 420 Lexington Ave, N Y
*Delta Chem Works, 23 W 60 St, N Y
Metallurgical Products Co, 35 & Moore Sts, Phila 45, Pa
*Pyrites Co, P O Box 1188, Wilmington 99, Del

COBALT ACETATE (Cobaltous Acetate)

$Co(C_2H_3O_2)_2 + 4H_2O$. M.P. 249.05. Reddish-violet deliq. cryst., acetic odor. Sp. gr. 1.7043 (18.7° C). Sol. water. Uses—mfr. sympathetic inks, paint and varnish driers. Grades—tech.; pure crystalline powd.; C.P.

J M Baird Co, 147 Nassau St, N Y
*J T Baker Chem Co, Phillipsburg, N J
*Baker & Adamson Products, 40 Rector St, N Y
Barclay Chem Co, 75 Varick St, N Y

COBALT CHLORIDE (Cobaltous Chloride)

a. $CoCl_2$. b. $CoCl_2.6H_2O$. Ruby-red, solid crystalline. Sp. gr. a. 3.356. b. 1.92. M.P. a. Sublimes. b. 86.75°C. Sol. water. Uses—mfr. sympathetic inks, barometers, thermometers, hydrometers, gas masks; electroplating; for cobalt and nickel alloys; ammonia absorbent. Grades—tech.; C.P.

J M Baird Co, 147 Nassau St, N Y
*J T Baker Chem Co, Phillipsburg, N J
Hawkins Chem Co, 3100 E Hennepin Ave, Minneapolis 13, Minn
Hummel Chem Co, 90 West St, N Y 6
*Mallinckrodt Chem, 2 & Mallinckrodt Sts, St Louis 7, Mo

COBALT CHROMATE (Cobaltous Chromate)

Varying composition. Brown powd. Sol. mineral acids and in solution CrO_3. Uses—pigment in ceramics.

Amend Drug & Chem Co, 117-119 E 24 St, N Y
J M Baird Co, 147 Nassau St, N Y

COBALT 2-ETHYLHEXOATE (Cobalt Octoate)

$Co[CH_3(CH_2)_3CH(C_2H_5)CO_2]_2$. M.W. 354.34. Reddish-purple amorp. solid. Uses—drier in paints and varnishes.

*Leffingwell Chem Co, P O Box 191, Whittier, Cal
Mathe Chem Co, 169 Milbank St, Lodi, N J
*Nuodex Products Co, 830 Magnolia Ave, Elizabeth, N J
*Fred'k A Stresen-Reuter, 2113 W Medill Ave, Chicago 47, Ill
*Witco Chem Co, 295 Madison Ave, N Y 17

COBALT FLUORIDE (Cobaltous Fluoride)

CoF_2. M.W. 96.94. Pink granular powd. Uses—organic fluorination.

*Baker & Adamson Products, 40 Rector St, N Y
*Gen Chem Div, Allied Chem & Dye Corp, 40 Rector St, N Y 6

COBALT HYDRATE (Cobaltous Hydroxide, Cobaltous Hydrate)

$Co(OH)_2$. Rose-red, amorp. powd. Sp. gr. 3.597. Sol. acids, ammonium salt solutions. Uses—mfr. cobalt salts, paint and varnish driers. Grades—tech.

Faesy & Besthoff, 325 Spring St, N Y 13
Hawkins Chem Co, 3100 E Hennepin Ave, Minneapolis 13, Minn
*Pyrites Co, P O Box 1188, Wilmington 99, Del
Republic Chem Corp, 94 Beekman St, N Y 38
*Fred'k A Stresen-Reuter, 2113 W Medill Ave, Chicago 47, Ill

COBALT LINOLEATE (Cobaltous Linoleate)

$Co(C_{18}H_{31}O_2)_2$. Brown, amorp. powd. Sol. alcohol, ether, oils. Uses—paint and varnish drier. Grades—liq.; solid; paste.

*Advance Solvents & Chem Corp, 245 5 Ave, N Y 16
J M Baird Co, 147 Nassau St, N Y
Beier Co, 150 Nassau St, N Y 38
Fred L Brooke Co, 3340 N Halsted St, Chicago, Ill

COBALT PEROXIDE see Cobalt Oxide

COBALT PHOSPHATE

$Co_3(PO_4)_2.2H_2O$. Pink powd. Uses—mfr. cobalt pigments; coloring glass, painting on porcelain.

J M Baird Co, 147 Nassau St, N Y
Hawkins Chem Co, 3100 E Hennepin Ave, Minneapolis 13, Minn

COBALT POWDER

Co 98% plus. M.P. -1.467°C, B.P. -3.185°C for the pure material. Sol. —dilute hydrochloric, sulfuric acids; readily in nitric acid. Available in 150 and finer mesh powd. Cont.—casks; bags. Uses—ceramics, lamp filaments; catalyst in hydrogenation of oils; inks; paints; varnishes; colored signs.

Hummel Chem Co, 90 West St, N Y 6

COBALT RESINATE (Cobaltous Resinate)

$Co(C_{44}H_{62}O_4)_2$. Brown, amorp. powd. Insol. water. Uses—drier in paints and varnishes; oil boiling. Grades—fused; tech.; pure; precipitated.

American Firstoline Corp, 420 Lexington Ave, N Y

COLOR LAKES

Pigment consisting of an organic sol. coloring matter combined with an inorganic base or carrier and characterized by a bright color. There are three classes of color lakes: 1. Composed of hydrate of aluminum dyed with solution of natural organic color; 2. The more extensively used type made by precipitating from solution various coal-tar colors by means of a metallic salt, tannin, or other suitable reagent, upon a base or carrier either previously prepared or coincidently formed; 3. A number of lakes combining both types in varying degree.

COLOR LAKES, COSMETIC

Consists generally of suitable aniline colors precipitated on aluminum hydroxide, blanc fixe or other harmless substrata. These color lakes must naturally be extraordinarily free from such heavy metals as lead, arsenic, mercury, etc. Their tinctorial power is high. In lipstick and rouge they are employed almost exclusively. In face powd. for toning—, largely in eyeshadows—somewhat in creams but not often in liq. and lotions due to their tendency to bleed (run).

COLORS, EARTH, continued

southern shores of the Caspian Sea and the refined pigment made from this ore is known as Persian Gulf Oxide. Deposits of iron manganese ores, having a rich brownish-green hue, were discovered on the Island of Cyprus and the refined product is marketed under the name of Turkey Umbers. Siennas are named after the Italian town of Sienna near where large quantities of bright yellow iron oxide are found. The finished products are marketed as raw and burnt grades. Veins of hydrated iron oxides are the raw material for ochres. Others in the group are the metallic browns and the iron magnetites (black oxides of iron). Iron oxide colors are also the siennas or umbers, either raw or burnt. Precipitated yellow oxides compete intensely with French, Indian, and African ochres. Calcined and precipitated iron oxides compete with the natural red hematites, such as Persian Gulf and Spanish oxides. Earth colors are employed in paints, leather finishes, in latex rubber, etc. See Siennas, Ochres, Umbers, Iron Oxide, Red: Iron Oxide, Yellow.

COLORS, GLASS

Liq. often containing resinates or similar organic compounds of various metals, the oxides of which form colors or pigments used for decorating pottery glass, tile, terracotta or similar ceramic surfaces. Another type of colors is that which consists of finely ground mixtures of pigments and low-melting glasses. This type is usually "fired" so that the color is directly incorporated into the finished article and is not simply a finish coat.

COLORS, INK

Dyes and pigments employed as the tinting agent. A limited number of water sol. dyes are used to make writing inks which contain water as the liq. medium. Other dyes, sol. in glycerine, are used in stamping, copying, and hectograph inks. Still others, sol. in such organic solvents as alcohols, ketones, hydrocarbons, esters, acids, and aldehydes, are used to make aniline and intaglio printing inks. Very definite limitations are imposed on the choice of ink colors, such as pigment particle size, brilliancy, intensity, resistance to light, oil absorption, tinting strength bleeding, resistance, to the chemical action of the products they may come in intimate contact with, such as adhesive pastes, vinegar, wet soaps, waxed wrappers, alcohol, lard, ammonia, etc.

COLORS, LACQUER

Colors of low oil absorption, chemically inert, (mainly pigments) possessing good permanency, soft texture, great tinctorial strength and good hiding power. The colors are ground by various means in some ingredient of a lacquer and the paste so formed is then mixed into the remaining ingredients of the lacquer to produce a finished colored lacquer.

COLORS, PAPER-MAKERS'

When max. whiteness has been obtained by bleaching pulp, paper manufacturers use blueing, such as ultramarine, and dyes, usually coal-tar anilines to tone the stock and offset any yellowness still remaining. These dyes, together with mineral pigments are employed to color the stock. The dyes penetrate the actual substance of the fibres. Pigments, however, color the stock by mechanical enmeshment with the fibres. See also, Dyes, Paper; Pigments, Paper. Pigments are less brilliant in hue than dyes, but are faster to light. If used in any quantity, they serve as fine fillers and have the same action as clay.

COLORS, PLASTIC

Special pigments, earth colors or sol. dyes, usually added during either the mixing or the rolling operation, which resist heat, pressure, etc.; possess ability to dissolve in certain common solvents, and impart generally that transparency of color so desirable in plastics. Among the pigments are:—Prussian blue, zinc oxide, titanium oxide, carbon black, lampblack, cadmium and chromium colors; the earth colors, such as siennas, ochres, and umbers; the synth. dyes, such as triphenylmethane basic colors, many of the azo colors, certain of vat dyes, etc.

COLORS, RUBBER

Mineral pigments or synth. dyes (usually in the form of lakes, bound to a mineral base) not greatly affected by heat, steam, or sulfur: for white shades zinc oxide and the titanium pigments are largely used; for black, carbon black, lampblack, or one of the charcoal blacks; for blue, ultramarine is often used; chrome pigments, for green; zinc chromate is standard yellow pigment; cadmium sulfides are available in various yellow and orange shades; golden antimony, for orange shades, or ochres where color value at low cost is the deciding factor; for crimson shades iron oxide red, crimson antimony, and vermilions are widely used.

COLORS, UNDERGLAZE

A ceramic decoration applied to ware before glazing or an incise decoration, embossing or inlaying. Uses—as body or glaze stain for china, stoneware, terra cotta, brick, enameled steel and ironware. Colors used under suitable glaze up to Cone 8 (1290° C.).

COLORS, VARNISH

Dyes sol. in alcohol are largely used: basic dyes, monoazo dyes (which do not contain sulfonic acid groups, such as aniline coupled with beta-naphthol), spirit blue, induline and nigrosine before they are sulfonated: sulfonated rosanilines, etc., are often employed.

COPPER ACETOARSENITE (Paris Green, Cupric Acetoarsenite, Emerald Green, Imperial Green, King's Green, Moss Green)

$Cu(C_2H_3O_2)_2.3Cu(AsO_2)_2$. Emerald green, amorp. powd. Mfr. white arsenic dissolved in baking soda ash solution, copper sulfate added, then acetic acid. Washed, filtered, dried at low temp. Sol. acids, ammon.a; insol. water. Uses—mfr. marine paints pigments; as insecticide and germicide; wood preservative.

J M Baird Co, 147 Nassau St, N Y
*Los Angeles Chem Co, 1960 Santa Fe Ave, Los Angeles 21, Cal

COPPER AMINOSULFATE see Copper Ammonium Sulfate

COPPER AMMONIUM SULFATE (Cupric Ammonium Sulfate, Copper Aminosulfate, Ammonio Cupric Sulfate)

$CuSO_4.4NH_3.H_2O$. Dark blue crystalline powd. Decomp. on heating. Sol. water. Uses—mfr. copper arsenate, insecticidal preps.; mordant in dyeing and printing textiles. Grades—tech.; C.P.

J M Baird Co, 147 Nassau St, N Y
*J T Baker Chem Co, Phillipsburg, N J

COPPER ARSENITE (Scheele's Green, Cupric Arsenic, Copper Orthoarsenite, Swedish Green)

$CuHAsO_3$. M.W. 187.51. Light green, amorp. powd. Decomp. on heating. Sol. acids, alcohol; insol. water. Uses—pigment paint, varnish and wall paper; printing calico; insecticidal compositions; in medicine. Grades—tech.; C.P.

J M Baird Co, 147 Nassau St, N Y
*Mallinckrodt Chem, 2 & Mallinckrodt Sts, St Louis 7 Mo

COPPER o-ARSENITE see Copper Arsenite

COPPER BICHLORIDE see Copper Chloride (Cupric)

COPPER BROMIDE

$CuBr_2$. Black, deliq. cryst. or crystalline powd. Sol. alcohol, water, acetone. Uses—intensifier in photography; to replace iodine by bromine in organic synthesis.

J M Baird Co, 147 Nassau St, N Y
*J T Baker Chem Co, Phillipsburg, N J
*Mallinckrodt Chem, 2 & Mallinckrodt Sts, St Louis 7, Mo
*Merck & Co, 100 Lincoln Ave, Rahway, N J

COPPER CARBONATE (Cupric Carbonate, Copper Subcarbonate, Brunswick Green, Bremen Green, Mineral Green, Artificial Malachite, Copper Lasur, Mountain Green)

$Cu_2(OH)_2CO_3$. Dark green powd. Sp. gr. 3.7-4.0. Decomp. on heating. Sol. acids; insol. water. Uses—mfr. copper salts, pyrotechnics; electroplating brass on copper; paint and varnish pigment; insecticide and germicide; coloring metals; astringent in pomades; antidote for phosphorous poisoning. Grades—tech. (50-52% copper, agricultural grade, 18-20%); C.P.

COPPER DICHLORIDE see Copper Chloride (Cupric)

COPPER FLUOBORATE (Cupric Fluoborate)

$Cu(BF_4)_2$. M.W. 237.2. 45% solution dark blue liq. Uses—in copper and copper alloy plating baths.

*Baker & Adamson Products, 40 Rector St, N Y
*Gen Chem Div, Allied Chem & Dye Corp, 40 Rector St, N Y 6
*Pelron Corp, 7740 W 47 St, Lyons, Ill

COPPER FLUORIDE

Uses—flux, opacifier in enamel, glass and ceramics; in prep. of brazing, soldering, welding fluxes, in electrical industry.

American Firstoline Corp, 420 Lexington Ave, N Y
*Baker & Adamson Products, 40 Rector St, N Y
*Gen Chem Div, Allied Chem & Dye Corp, 40 Rector St, N Y 6
Henry Sundheimer Co, 103 Park Ave, N Y 17

COPPER FORMATE

$Cu(OOCH)_2$. M.W. 153.59. Bluish crystalline powd. Uses—preps. of catalysts for hydrogenation and isomerization reactions.

J M Baird Co, 147 Nassau St, N Y
*City Chem Corp, 132 W 22 St, N Y 11

COPPER GLUCONATE

$[CH_2OH(CHOH)_4\ COO]_2\ Cu$. M.W. 453.87.

J M Baird Co, 147 Nassau St, N Y
*Chas Pfizer & Co, 630 Flushing Ave, Bklyn 6, N Y

COPPER HEMIOXIDE see Copper Oxide, Red

COPPER HYDRATE see Copper Hydroxide

COPPER HYDROXIDE (Copper Hydrate, Cupric Hydroxide, Hydrated Copper Oxide)

$Cu(OH)_2$. M.W. 97.59. Blue, amorp. powd. Sp. gr. 3.368. Decomp. on heating. Sol. acids. Uses—mfr. copper salts, rayon; as mordant in textile dyeing; pigments in paints, varnishes and for staining paper; laboratory reagent. Grades—tech.

J M Baird Co, 147 Nassau St, N Y
*Leffingwell Chem Co, P O Box 191, Whittier, Cal

COPPER OXYCHLORIDE

$CuCl_2.2Cu0.4H_2O$. Bluish-green powd. Sol. ammonium hydroxide; insol. wafer. Uses—as green pigment.

J M Baird Co, 147 Nassau St, N Y
*E I Du Pont de Nemours & Co, Grasselli Chem Dept, Wilmington, Del
Industrial Sales Corp, 500 5 Ave, N Y 18
*Los Angeles Chem Co, 1960 Santa Fe Ave, Los Angeles 21, Cal
*Rohm & Haas Co, Washington Sq, Phila 5, Pa

COPPER OXYCHLORIDE SULFATE

Cu 55-57%. Fluffy light blue powd., minute particle size, low apparent gravity. This material is essentially penta (5) basic. Uses—agricultural fungicide for dusting, spraying or seed treatment.

W R E Andrews Sales, 1505 Race St, Phila, Pa
J M Baird Co, 147 Nassau St, N Y

COPPER PALMITATE

*Mathe Chem Co, 169 Milbank St, Lodi, N J

COPPER 3-PHENYLSALICYLATE

$C_{26}H_{18}CuO_6$. M.W. 490. Tan crystalline material. Uses—odorless preservative for textiles, leather, and wood.

*Bios Labs, 17 W 60 St, N Y 23
*Dow Chem Co, Midland, Mich

COPPER PHOSPHATE

*J T Baker Chem Co, Phillipsburg, N J
*City Chem Corp, 132 W 22 St, N Y 11
*Mtn Copper Co, 216 Pine St, San Francisco 4, Cal
*Victor Chem Works, 141 W Jackson Blvd, Chicago 4, Ill

COPPER POWDER

Cu. 99.60% plus. Usually supplied in 100-200-300 mesh.

*Argus Chem Lab, 56 Clifton Pl, Bklyn 5, N Y
*Biofen Labs, 14 6 St, Bridgeport 7, Conn
*Glidden Co, 1717 Summer St, Hammond, Ind

*Warwick Chem Co Div, Wood River Junction, R I

COPPER RESINATE (Cupric Resinate)

$Cu(C_{20}H_{29}O_2)_2$. Green, amorp. powd. Sol. ether, oils. Uses—mfr. anti-fouling paints, insecticidal compositions, ceramics; as preservative metal paint. Grades—tech.

J M Baird Co, 147 Nassau St, N Y
*J Meyer & Sons, 4321 N 4 St, Phila 40, Pa

COPPER RICINOLEATE

$Cu[CH_3(CH_2)_5CHOHCH_2CHCH(CH_2)_7CO_2]_2$. M. W 654. Deep green solid. Softening point of 55-60°C. Uses—mainly as fungicide; lubricant.

J M Baird Co, 147 Nassau St, N Y

COPPER SHOT

Reddish, lustrous metal in pellet or globular form. Becomes dull when exposed to air. Sp. gr. 8.96. M.P. 1,083°C. B.P. 2,310°C. Sol. hot conc. sulfuric acid, hot conc. nitric acid and dilute nitric acid. Sl. sol. in dilute sulfuric acid, ammonium hydroxide and organic acids very sl. sol. in hydroxide acid; insol. cold conc. nitric acid, water and alcohol.

W R E Andrews Sales, 1505 Race St, Phila, Pa
J T Baker Chem Co, Phillipsburg, N J
*Glidden Co, 1717 Summer St, Hammond, Ind
*Mallinckrodt Chem, 2 & Mallinckrodt Sts, St Louis 7, Mo

COPPER SUBACETATE see Copper Acetate

COPPER SUBCARBONATE see Copper Carbonate

COPPER SUBOXIDE see Copper Oxide, Red

COPPER SULFATE (Blue Vitriol, Blue Stone, Blue Copperas, Roman Vitriol, Salzburg Vitriol)

$CuSO_4.5H_2O$. Blue, crystalline powd. or lumps. Efflorescent (when dehydrated almost white). Sp. gr. 2.284 (15°C). Loses water at 110°C. Sol. water.

*Company classifies itself as manufacturer or producer of this product

COPPER SULFATE, continued

alcohol. Uses—mfr. copper salts, printing inks, electric batteries, Paris green, Bordeaux mixture, casein glues; as mordant in printing and dyeing textiles; germicide, insecticide and fungicide; laboratory reagent; wood preservative; dehydrating agent, (anhydrous form); pigments in paints and hair dyes; copper plating, etching, and in electrolytic baths; in the sweetening process in refining; for drawing wire; process engraving and photo engraving; tanning leather; purifying drinking water and swimming baths; preserving pulpwood and ground pulp; for coloring metals; in medicine. Grades—C.P.; tech.; 99% cryst.; granulated; powdered.

CREOSOTE see Creosote, Wood

CREOSOTE CARBONATE (Creosotal)

Colorless to yellowish liq., sl. creosote odor. Sp. gr. not below 1.145 at 20°C. Insol. water; sol. alcohol. Grades—U.S.P.

Barclay Chem Co, 75 Varick St, N Y
*Heyden Chem Corp, 290-300 River Dr, Garfield, N J
*Mallinckrodt Chem, 2 & Mallinckrodt Sts, St Louis 7, Mo
*Merck & Co, 100 Lincoln Ave, Rahway, N J
N Y Quinine & Chem Works, 99 N 11 St, Bklyn 11, N Y
Republic Chem Corp, 94 Beekman St, N Y 38

CREOSOTE, COAL-TAR (Creosote Oil, Liquid Patch Oil)

Yellowish to dark green-brown, oily liq.; clear at 38°C. or higher. Characteristic odor; poisonous. Mixture of phenols, contains anthracene and naphthalene. Sp. gr. 1.03 (38°C). Distilling range 200° to 400°C. Sol. alcohol, benzene and toluene. Uses—wood preservatives, disinfectants, insecticides, and germicides. Grades—tech.

CYCLOHEXANOL ACETATE (Cyclohexyl Acetate)

$CH_3COOC_6H_{11}$. M.W. 142.11. Sp. gr. 0.966. B.P. 177°C. Insol. water; sol. alcohol.

American-British Chem Supplies, 180 Madison Ave, N Y
Barclay Chem Co, 75 Varick St, N Y

CYCLOHEXANONE (Ketohexamethylene)

($C_6H_{10}O$). Colorless liq., odor resembles acetone. Pounds per gal. 7.87. Sp. gr. 0.945; refract. index 1.443-1.451; B.P. 1554-156°C; Flash Point 50°C; F.P. —45°C. Sol. in water up to 5%; sol. in organic solvents, non-toxic. Uses—solvent for nitrocellulose and cellulose acetate; also resins, gums, shellac. Mfr. of shoe and metal polishes; solvent for fats, oils, waxes, crude rubber, cellulose ethers, solvent for basic dyes for lacquers; in paint removers; solvent and dispersing agent for dyes in textile dyeing; in metal degreasing.

CYCLOHEXANONE OXIME

$C_6H_{10}NO$. M.W. 113. White crystalline solid. Sol. ether, ethanol. Uses—intermediate; caprolactum syntheses; fuel additive.

*Bios Labs, 17 W 60 St, N Y 23
*E I Du Pont de Nemours & Co, Explosives Dept, Chem & Misc Sales Section, Wilmington 98, Del
*Hexagon Labs, 3536 Peartree Ave, Bronx 60, N Y

CYCLOHEXENE (Benzene Tetrahydride)

C_6H_{10}. M.W. 82.14. Colorless liq. B.P. 83.3° C. Sp. gr. 0.810°C. at 20/4°C. Insol. in water and alcohol; sol. in unsaturated cyclic hydrocarbons. Uses—special solvent; intermediate in organic synthesis.

*Phillips Petroleum Co, Market Development Div, Bartlesville, Okla

CYCLOHEXYLAMINE

$C_6H_{11}NH_2$. M.W. 99. Clear, colorless liq. B.P. 760°C. at 134.5 mm. Sp. gr. at 25°/15.6°C; 0.865 approx. Miscible with water in all proportions. Wt. per gal., 7 lbs., approx. Uses—as dyestuff intermediate, solvent emulsifying agent, insecticide, and in organic synthesis. Ship. Class.—chemicals.

*Monsanto Chem Co, Organic Chem Div, 1700 S 2 St, St Louis 4, Mo

CYCLOHEXATRIENE see Benzol

CYCLOHEXYL BROMIDE (Bromocyclohexane)

$C_6H_{11}Br$. M.W. 163. Colorless to sl. yellowish liq. Uses—pharmaceutical intermediate, source of cyclohexyl radical.

*Dow Chem Co, Midland, Mich
*Halogen Chem, 1505 Charlton Dr, Columbia, S C
*Mich Chem Corp, 500 N Bankson St, St Louis, Mich

CYCLOHEXYL BUTYRATE

*E I Du Pont de Nemours & Co, Organic Chem Dept, Fine Chem Div, Wilmington 98, Del
*Florasynth Labs, 1513 Olmstead Ave, N Y 61

CYCLOHEXYL CHLORIDE

$C_6H_{11}Cl$. M.W. 118.6. White to pale amber liquid. B.P. 143°C. Insol. water. Uses—organic and pharmaceutical synthesis.

*Dow Chem Co, Midland, Mich
*Halogen Chem, 1505 Charlton Dr, Columbia, S C

o-CYCLOHEXYLPHENOL

$(HO)C_6H_4(C_6H_{11})$. M.W. 176.25. Grayish-white crystalline solid. Phenolic odor. Sp. gr. 1.018 @ 60°/25°. M.P. 47.3—55.5. B.P. 148°C. @ 10 mm. Flash point 273.2°F. Sol. acetone, benzene, ether, carbon tetrachloride. Sl. sol. water.

*Dow Chem Co, Midland, Mich

p-CYCLOHEXYLPHENOL

$C_6H_{11}OH$. M.W. 176.1. Grayish-white fine cryst. with faint phenolic odor. B.P. 181°C./25 mm. M.P. 131°C. Sol. alcohol; insol. water. Uses—organic synthesis; phenolic resins.

*Dow Chem Co, Midland, Mich

CYCLOHEXYL STEARATE

$C_{24}H_{46}O_2$. M.W. 366.61. Sp. gr. 0.882 at 30°/15.5°C. Refractive index 1.4560 at 30°C. M.P. 26-28°C. B.P. 250-253°C. (20 m.m.), with decomposition. Pale yellow color. Sol. benzene, toluene, acetone, butylacetate, methanol. Insol. water. Uses—plasticizer for natural and synth. resins in coating compositions.

Griffin Chem Co, 1000 16 St, San Francisco 7, Cal
*Kessler Chem Co, State Rd & Cottman Ave, Phila 35, Pa

CYCLONOL

A cyclic acetate. Practically non-volatile nearly odorless, strongly hydrotropic. Lbs. per gal. 8.95: Sp. gr. 1.074; refract. index 1.474; B.P. 250°C.; Flash Point 75°C. Non-sol. in water; sol. organic solvents; non-toxic. Uses—as a plasticizer for cellulose acetate for use in lacquers and on prep. of films and sheets of this material; solvent for fats, resins, oils. Uses—in mfr. soap to produce clear water sol. combinations; increases wetting out, emulsifying and detergent properties of soap; mfr. cleaning compounds.

Bendix Chem Corp, 420 Lexington Ave, N Y
Dodge & Olcott, 180 Varick St, N Y 14
R W Greeff & Co, 10 Rockefeller Plaza, N Y 20
*Magnus, Mabee & Reynard, 16 Desbrosses St, N Y 13

CYCLOPENTANE (Pentamethylene)

C_5H_{10}. M.W. 70.1. A hydrocarbon in Russian and Caucasian petroleum. Colorless liq. M.P. 95°. B.P. 50.5°. Insol. water; sol. alcohol.

*Phillips Petroleum Co, Market Development Div, Bartlesville, Okla

CYCLOPENTANONE

C_5H_8O. M.W. 84.06. Colorless mobile liq. B.P. 125°C. at 630 mm. Uses—chemical intermediate for pharmaceutical and perfume mfr.

*Algo Chem Co, 1027 S Deacon St, Detroit, Mich
*Arapahoe Chem, 2800 Pearl St, Boulder, Col
*Bios Labs, 17 W 60 St, N Y 23
*Halogen Chem, 1505 Charlton Dr, Columbia, S C

CYCLOPENTENE

C_5H_8O. M.W. 68.1. Colorless liq., characteristic odor. Uses—organic synthesis, plastics.

*Magna Mfg Co, Haskell, N J

CYCLOPENTYL BROMIDE (Cyclopentane, bromo)

C_5H_9Br. M.W. 148.99. B.P. 137.9°C.

*Arapahoe Chem, 2800 Pearl St, Boulder, Col
*Bios Labs, 17 W 60 St, N Y 23
*Halogen Chem, 1505 Charlton Dr, Columbia, S C
*Mich Chem Corp, 500 N Bankson St, St Louis, Mich

CYCLOPROPANE (Trimethylene)

$CH_2CH_2CH_2$. M.W. 42.08. Colorless gas. M.P. 126.6. B.P. 34.4. Sol. alcohol, ether; insol. water. Uses—organic sythesis.

*Toch Bros, 2600 Richmond Terrace, S I, N Y

DDT (Dichloro-Diphenyl-Trichloro-ethane)

$(ClC_6H_4)_2CHCCl_3$. Colorless cryst., M.P. 89°C. Sol. Freon, kerosene, hydrocarbon solvents; insol water. Technical DDT is a mixture of several isomers and reaction byproducts, although the main constituent is 2,2-bis (p-chlorophenyl)—1,1,1-trichloroethane. The M.P. is consequently dependent upon the preponderance of the latter isomer, and some military specifications call for a higher setting point. Uses—insecticide active ingredient. Grades—tech. aerosol and purified.

DEGRAS (Wool Grease, Sod Oil, Tanning Grease, Leather Grease)

Dark brown, solid amorp., disagreeable odor. Natural. Obtained by washing sheep's wool. Sp. gr. 0.9322-0.9449. Solidification point 38-40°C. Saponification No. 84-127. Iodine No. 15-21.5. Acid No. 0.5-4.3. Sol. alcohol, ether, benzol. Uses—mfr. lanolin, leather stuffing and dressing compositions, printing inks, belt dressings, varnishes, soaps. Grades—American; English; Moellen (9.V.); neutral.

DENATURANTS, ALCOHOL

Chemicals specified by the Bureau of Internal Revenue, U. S. Treasury Dept., to be added to ethyl alcohol, sold tax free for industrial purposes, to render it unpotable. A number of denaturing formulas are approved by the Bureau to meet particular manufacturing requirements. Complete data are available from the Bureau or from the industrial alcohol producers.

*Sindar Corp, 330 W 42 St, N Y 18

DEODORANTS, PYROXYLIN

Products employed to disguise the characteristic odor of Celluloid, Pyroxylin and other cellulose consumer products.

*Aromatic Products, 15 E 30 St, N Y
*E I Du Pont de Nemours & Co, Organic Chem Dept, Fine Chem Div, Wilmington 98, Del
*Forty-Four Trinity Pl Corp, 44 Trinity Pl, N Y 6
*Sindar Corp, 330 W 42 St, N Y 18

DEODORANTS, RUBBER

Aromatic compounds or essential oils or combinations of both generally incorporated during the milling operation, to mask characteristic odor of cured rubber: used chiefly in drug sundries, rain coatings, rubber shoes, and various types of rubber goods used in the home or on the person. Impart a more pleasing odor to finished goods, increasing consumer appeal.

DESIZING AGENTS

Sizes of the gelatine, glue, gum, oil, wax, paraffin, or starch variety, must be removed from fabrics before dyeing. Certain of these can be emulsified and removed by washing with a suitable detergent. Starch must be converted into a water-sol. compound and this is done with enzymatic products, which digest the starch, converting it into maltose. Other desizing agents are of the solvent type. See also Enzymatic Preps.

MONSANTO
SANTOMERSE No. 1
ALL-PURPOSE DETERGENT AND WETTING AGENT

A synthetic detergent with a minimum of 40% active alkyl aryl sulfonate, the remainder being principally inorganic builders. Widely used in textile industry for scouring and penetration . . . in other industrial processes as cleaner, emulsifier and wetting agent . . . in compounding household, industrial and dairy cleaners. Write for booklet.

SANTOMERSE 80—Like Santomerse No. 1 except having 80% active alkyl aryl sulfonate.

MONSANTO CHEMICAL COMPANY
Phosphate Division
St. Louis 4, Missouri

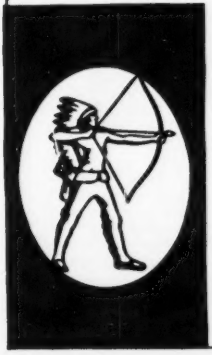
METSO® SILICATED DETERGENTS

PHILADELPHIA QUARTZ CO.
Established 1831 • 9 Plants
1168 Public Ledger Bldg.
Philadelphia 6, Penna.
DISTRIBUTORS IN 65 CITIES

Step-up cleaning results with these extra values:

- Free-flowing powders
- Quickly soluble
- Uniform cleaning
- Strength maintained at high activity
- Soluble silica content resists corrosiveness
- Soluble silica prevents dirt re-deposition

Metso® Granular Sodium Metasilicate ($Na_2SiO_3.5H_2O$) • Metso 99 Sodium Sesquisilicate ($Na_3HSiO_4.5H_2O$) • U.S. Pat. 2145749



SYNTHETIC DETERGENTS

KREELON 4D . . . *40% synthetic detergent flake*

KREELON 4G . . . *40% synthetic detergent powder*

Kreelon* is an efficient synthetic detergent and wetting agent. It *penetrates, spreads, emulsifies, disperses and cleans as it wets.* Its great value lies in its ability to function well in acid, alkaline or neutral solutions, and in hard or soft waters — either alone or in solutions and dry mixes with a great number of other chemicals.

*Reg. U. S. Pat. Off.

Write for literature describing the properties and suggested uses of Wyandotte Kreelon. Samples available.

DETERGENTS, TEXTILE

Specially formulated compounds prepared for cleansing textiles. Each type of textile fibre presents its own special problem. Textiles are washed at various stage of mfr. In recent years advances have been made in studying the peculiar requirements at each stage and in the accurate control of pH values, etc. Scientifically prepared products help to preserve tensile strength, provide better resistance to abrasive action, give whiter colors, assist in penetration of dyes, more level shades, etc.

DIACETONE see Alcohol, Diacetone

DIACETYL-DIOXIME see Dimethyl Glyoxime

DIALLYL PHTHALATE

$C_6H_4(CO_2CH_2CH:CH_2)_2$. M.W. 246. Mild, sl. lachrymatory odor. Uses—in mfr. of low pressure laminates and castings.

Barclay Chem Co, 75 Varick St, N Y
*Ohio-Apex, Nitro, W Va
*Shell Chem Corp, 50 W 50 St, N Y 20
Stoney-Mueller, Page & Newark Ave, Lyndhurst, N J
Wisconsin Solvents & Chem Corp, 1719 S 83 St, Milwaukee 14, Wis

DIALLYL SUCCINATE

$(CH_2COOC_3H_5)_2$. M.W. 198.21. Colorless, oily liq.; mild odor. Insol. water; sol. benzene, alcohol, ether, etc. Uses—plasticizer.

*Edwal Labs, Ringwood, Ill
*Monomer-Polymer, 511 Lancaster St, Leominster, Mass

DIALLYL SULFIDE

$(C_3H_5)_2S$. M.W. 114.17. A colorless or sl. yellowish liq. B.P. 138°. Sl. sol. water, miscible alcohol, ether. Constituent of garlic, and used hypodermically in tuberculosis and cholera.

*Edwal Labs, Ringwood, Ill

DIALOZITE see Manganese Carbonate

DIAMALT see Diastase

DIAMANTINE

*Linick Chem Co, 29 E Madison St, Chicago, Ill

DIAMIDE HYDRATE see Hydrazine Hydrate

DIAMIDODIETHYLDIPHENYL see Tolidine

DIAMINE SULFATE see Hydrazine Sulfate

p-DIAMINODIPHENYL SULFATE see Benzidine Sulfate

m-DIAMINOANISOLE

$OCH_3C_6H_3(NH_2)_2$. M.W. 138. Fused mass, light brown liq. when molten. M.P. 63°C. Uses—intermediate in mfr. of dyestuffs.

*Verona Chem Co, 26 Verona Ave, Newark, N J

o-DIAMINODITOYL see Tolidine

DIAMIDOPHENOL see Diaminophenol Hydrochloride

p-DIAMINODIPHENYL SULFATE see Benzidine Sulfate

DIAMINOPHENOL HYDROCHLORIDE (Amidol, Diamidophenol)

$(NH_2)_2C_6H_3OH.2HCl$ (1.2.4). M.W. 197.01. White or grayish-white cryst. Slightly sol. alcohol; easily sol. water. Uses—photo developing; dyeing furs and hair.

*Verona Chem Co, 26 Verona Ave, Newark, N J

2,6-DIAMINO PYRIDINE

*Arizona Chem Co, 30 Rockefeller Plaza, N Y 20
*Bios Labs, 17 W 60 St, N Y 23

DIAMMONIUM o-PHOSPHATE see Ammonium Phosphate, Di

DIAMYL NAPHTHALENE

$C_{10}H_6(C_5H_{11})_2$. M.W. 268. Sp. gr. 0.93-0.94. B.P 198^{20}. Solidifies —30°. Viscous oily liq. Insol. water. Used as plasticizer for rubber in synthetic resins for mutation of inks, constant temp. bath media and in wetting agents.

*Sharples Chem, 123 S Broad St, Phila 9, Pa

DI-secondary-AMYL PHENOL

$(C_5H_{11})_2C_6H_3OH$. M.W. 235. Light straw color. Sol. most organic solvents. Uses—syntheses of plasticizers, insecticides, textile assistants, pharmaceuticals.

*Sharples Chem, 123 S Broad St, Phila 9, Pa

DI-tert-AMYL PHENOL

$(C_5H_{11})_2C_6H_3OH$. M.W. 234.37. Light yellow to brown. B.R. 275-310°C. Uses—intermediate; surface active compounds; resin mfr.; lubricating oil additives and rubber chemicals.

J M Baird Co, 147 Nassau St, N Y
*Sharples Chem, 123 S Broad St, Phila 9, Pa

DIAMYL PHENOL

*Sharples Chem, 123 S Broad St, Phila 9, Pa

DIAMYL PHOSPHATE

$(C_5H_{11})_2HPO_4$. Syrupy liq. B.P. decomp. Sol. water. Uses—as a solvent, plasticizer.

J M Baird Co, 147 Nassau St, N Y
*Victor Chem Works, 141 W Jackson Blvd, Chicago 4, Ill

DIAMYLAMINE

$(C_5H_{11})_2NH$. M.W. 157.19. Dist. Range 180-205°C. Sp. gr. 0.767 (20°C). Viscosity 0.01264 Poise. Refractive Index 1.4262 (19°C). Sur. Ten. 24.4 Dynes/cm. Sp. Heat at room temp., 0.54 cal./gram. Heat of Vap., 83 cal./gram. Coeff of Exp. 0.00102 (20-60°C). Flash Point, 124°F. Sol. very sl. in water. Uses—reacts with organic acids to make emulsifying compounds; reacts with various sulfur derivatives of use in rubber, mining and steel industries; solvent for oils, resins, several cellulose esters.

*Sharples Chem, 123 S Broad St, Phila 9, Pa

DIANHYDRO SORBITOL see Sorbide

DIANISIDINE (Dimethoxybenzidine, Bianisidine)

$C_{14}H_{16}O_2N_2$. 1:3:4. White crystalline needles. M.P. 172°C. Sol. alcohol, ether. Uses—mfr. azo dyes, intermediates. Grades—tech.

Antara Products Div, 435 Hudson St, N Y 14
*Carwin Co, Stiles Lane, N Haven, Conn
Fallek Products Co, 163 Broadway, N Y 6

DIASPORE see Aluminum Hydroxide

DIASTAFOR see Diastase

DIASTASUM see Diastase

DI-tert-AMYL DISULFIDE

DIASTASE (Diastafor, Diastasum, Amylase, Diamalt)

Yellowish white to brownish white, solid, amorp. Natural. Sol. water. Uses—solubilizing size in gray goods before printing; converting starch into sugar; solubilized starch into sugar; solubilized starch glues and adhesives; leavening agent in bread making; in medicine. Grades—dry; liq.; numerous qualities as to use.

American Roland Corp, 16 Hudson St, N Y
J M Baird Co, 147 Nassau St, N Y
*Bios Labs, 17 W 60 St, N Y 23
*Paul-Lewis Lab, 4253 N Port Washington Rd, Milwaukee, Wis

Celite® DIATOMACEOUS EARTH

The Johns-Manville deposit of diatomaceous earth at Lompoc, California is the largest and purest known. It is the source of many Celite Products which have wide application in the chemical and process industries.

CELITE FILTER AIDS

They provide maximum flow rates with required clarity in the filtering of scores of products, from sugar and syrups to drugs and lubricants.

CELITE MINERAL FILLERS

They are used in many industrial processes and provide high absorption, light weight, large surface area, low refractive index and superior suspension.

Johns-Manville
22 EAST 40th STREET NEW YORK 16, N. Y.

dibutyl phthalate

• Eastman dibutyl phthalate is a clear, colorless liquid with excellent light and heat stability. It is the most widely used plasticizer for cellulose nitrate and is particularly desirable in cellulose nitrate lacquers because of its high dilution ratio with petroleum naphtha. Available in drums, compartmented and full tank cars.

3,3-DICHLOROBENZIDINE HYDROCHLORIDE

($C_6H_3ClNH_2{\cdot}CH$). M.W. of base 253.1. Sol. in hot dil. acid. Uses—intermediate for dyes and pigments.

*Carwin Co, Stiles Lane, N Haven, Conn
Fallek Products Co, 163 Broadway, N Y 6

2,4-DICHLOROBENZOTRICHLORIDE

$C_6H_3CCl_3Cl_2$. M.W. 264.6. White crystalline solid. M.P. 45-8°C. Sol. organic solvents; insol. water. Uses—interm. in mfr. of pharmaceuticals, dyes and organics.

*Heyden Chem Corp, 290-300 River Dr, Garfield, N J
Warren-Douglas Chem, 1513 Burt St, Omaha 2, Neb

3,4-DICHLOROBENZOTRICHLORIDE

*Heyden Chem Corp, 290-300 River Dr, Garfield, N J

2,4-DICHLOROBENZOYL CHLORIDE

$C_6H_3COClCl_2$. M.W. 209.5. Colorless liq. B.P. 260°C. F.P. 15°C. Sol. most organ. solvents; insol. water; sl. sol. heptane. Uses—interm. in manuf. pharmaceuticals, dyes and other organics.

*Heyden Chem Corp, 290-300 River Dr, Garfield, N J

3,4-DICHLOROBENZOYL CHLORIDE

$C_6H_3COClCl_2$. M.W. 209.5. Colorless liq. B.P. 270°C. F.P. 20-25°C. Sol. most organ. solvents; insol. water; sl. sol. heptane. Uses—interm. in mfr. pharmaceuticals, dyes and other organics.

*Heyden Chem Corp, 290-300 River Dr, Garfield, N J

2,4-DICHLORO BENZYL CHLORIDE

Cole Labs, 42-25 9 St, L I C 1, N Y
*Heyden Chem Corp, 290-300 River Dr, Garfield, N J

DICHLORODIFLUOROMETHANE

CCl_2F_2. Water-white refrigerant. B.P. —21.7°F. Uses—refrigerant in commerical and air conditioning refrigerating apparatus and household refrigerators. Grades—extremely pure.

Ansul Chem Co, Marinette, Wis
*E I Du Pont de Nemours & Co, Organic Chem Dept, Kinetic Chem Div, Wilmington 98, Del
Matheson Co, Paragon Div, E Rutherford, N J
Republic Chem Corp, 94 Beekman St, N Y 38

DIPHENYL AMINE CHLORASINE

*Carbide & Carbon Chem Co, 30 E 42 St, N Y 17

DICHLORO-DIPHENYL-TRICHLOROETHANE see DDT

DICHLOROETHANE see Ethylene Dichloride

DICHLOROETHYL FORMAL

$CH_2(OCH_2CH_2Cl)_2$. Colorless liq. Sp. gr. 1.2339. at 20°/20°C. B.P. 218.1°C. Uses—intermediate in mfr. of a synthetic "rubber" which is characterized by low hydrocarbon solubility and flexibility at low temperatures; chemical intermediate.

American-British Chem Supplies, 180 Madison Ave, N Y
American Firstoline Corp, 420 Lexington Ave, N Y
*Carbide & Carbon Chem Co, 30 E 42 St, N Y 17

DICHLOROETHYLENE see Ethylene Dichloride

DICHLOROMETHANE see Methylene Chloride

1,2-DICHLORO-2-FLUOROPROPANE

$CH_3CFClCH_2Cl$. M.W. 131. Colorless liq. B.P. 88.6°C. Insol. water. Uses—synthesis of organic fluorine chemicals.

*Halogen Chem, 1505 Charlton Dr, Columbia, S C

DICHLOROMONOFLUOROMETHANE

*E I Du Pont de Nemours & Co, Organic Chem Dept, Kinetic Chem Div, Wilmington 98, Del
Matheson Co, Paragon Div, E Rutherford, N J

NIAGARA

for PARADICHLOROBENZENE

Depend upon it . . . for purity and unvarying high quality, NIALK Paradichlorobenzene is unsurpassed.

NIAGARA ALKALI COMPANY

60 East 42nd Street, New York 17, New York

NIALK* Liquid Chlorine · NIALK Caustic Potash · NIALK Carbonate of Potash
NIALK Caustic Soda · NIALK Paradichlorobenzene · NIALK TRICHLORethylene
NIAGATHAL* (Tetrachloro Phthalic Anhydride) *Trade-mark

*Company classifies itself as manufacturer or producer of this product

2,5-DICHLORONITROBENZENE (1-Nitro-2,5-Dichlorbenzene, p-Dichloronitrobenzene)

$Cl_2C_6H_3.NO_2$. M.W. 192. Tawny colord granular material; mild aromatic odor. M.P. 52.5°C. B.P. 260° C. Sol. benzene, chloroform, carbon disulfide, hot alcohol; insol. water. Uses—intermediate, rubber accelerator, disinfectants, fungicides.

Advance Solvents & Chem Corp, 245 5 Ave, N Y 16
Antara Products Div, 435 Hudson St, N Y 14
*Monsanto Chem Co, Organic Chem Div, 1700 S 2 St, St Louis 4, Mo
*Verona Chem Co, 26 Verona Ave, Newark, N J

p-DICHLORONITROBENZENE see 2,5-Dichloronitrobenzene

1,1-DICHLORO-1-NITROETHANE

$CH_3C(NO_2)Cl_2$. M.W. 143.97. Insol. water; sol. organic liq. Uses—anti-gelling agent for rubber cement, solvent for fats and waxes.

*Commercial Solvents Corp, 17 E 42 St, N Y 17

1,1-DICHLORO-1-NITROPROPANE

$CH_3CH_2C(NO_2)Cl_{22}$. M.W. 157.99. Insol. water; sol. organic liq. Uses—raw material for synthesis, anti-gelling agent in rubber cement; solvent for fats and waxes.

*Commercial Solvents Corp, 17 E 42 St, N Y 17

DICHLOROPHENOL

$Cl_2C_6H_3.OH$. M.W. 162.95. Needles. M.P. 45°C. B.P. 209-10°C. Very sol. ether, alcohol, sl. in water. Uses—as intermediate.

*Dow Chem Co, Midland, Mich
*Monsanto Chem Co, Organic Chem Div, 1700 S 2 St, St Louis 4, Mo

DICHLORPHENOLSULFONPHTHALEIN see Chlorophenol Red

DICHLOROPHENYLAMINE see Dichloroaniline

x-DICHLORO [PHENYL ETHER] see Ether, Dichlorodiphenyl

DICHLOROTETRAFLUOROETHANE

Ansul Chem Co, Marinette, Wis
*E I Du Pont de Nemours & Co, Organic Chem Dept, Kinetic Chem Div, Wilmington 98, Del
Matheson Co, Paragon Div, E Rutherford, N J

2,4-DICHLOROTOLUENE

$C_6H_2CH_3Cl_2$. M.W. 161.08. Colorless liq. B.P. 202°C. F.P. —13.0°C. Sol. most organ. solvents; insol. water. Uses—high boil. solvent interm. for organ. synthesis.

*Heyden Chem Corp, 290-300 River Dr, Garfield, N J

N-DICHLORO-p-TOLUENESULFONAMIDE see Chloramine T, Di

3,4-DICHLOROTOLUENE

$C_6H_2CH_3Cl_2$. M.W. 161.08. Colorless liq. B.P. 213.0°C. F.P. —14.0°C. Sol. most organ. solvents; insol. water. Uses—high boiling solvent, interm. for organ. synthesis.

*Heyden Chem Corp, 290-300 River Dr, Garfield, N J

DICYANDIAMID (Dicyandiamine, Dicyanodiamide, Cyanguanidine)

$NH_2C(NH)NHCN$. Grayish-white powd. M.P. 304-5°C. Sol. water, alcohol; sl. sol. ether. Uses—in fertilizers; intermediate in organic synthesis; mfr. rubber chemicals, pharmaceutical and cosmetic specialties. Grades—tech.

*American Cyanamid Co, Industrial Chem Div, 30 Rockefeller Plaza, N Y 20
J M Baird Co, 147 Nassau St, N Y
Chematar Inc, Exchange Pl, N Y 5
Schmitz-Schoenewaldt-Turner Co, 20 Vesey St, N Y 7

DICYANDIAMINE see Dicyandiamid

DICYANODIAMIDE, see Dicyandiamid

DICYCLOHEXYLAMINE

Water-white liq. with faint odor resembling cyclohexylamine. B.P. at 760 mm, 255.8°; Crystallizing pt. °C. —0.1; Sp. gr. at 25/25°C. 0.9104; Flash pt. °C. 100; Fire pt. (sustained combustion), °C. 160. Sl. sol. water; sol. in all common organic solvents and miscible with cyclohexylamine. Does not form an azeotropic mixture on distillation with water. A strong base. Uses—organic synthesis; as an insecticide; plasticizer; corrosion inhibitor; mfr. dyes, emulsifying agents, drycleaning soaps, acid gas absorbents.

*Monsanto Chem Co, Organic Chem Div, 1700 S 2 St, St Louis 4, Mo

DICYCLOHEXYLPHTHALATE

$C_6H_4(CO_2C_6H_{11})_2$. Insol. water, sol. alcohol. M.P. 66°C.

*Barrett Div, 40 Rector St, N Y 6
Griffin Chem Co, 1000 16 St, San Francisco 7, Cal
B J Howard Co, Whitaker Bldg, Baltimore 2, Md
Stoney-Mueller, Page & Newark Ave, Lyndhurst, N J
Wisconsin Solvents & Chem Corp, 1719 S 83 St, Milwaukee 14, Wis

DICYCLOPENTADINE

Col. crystals. M.P. 32.9°. Very sol. alcohol, ether.

Antara Products Div, 435 Hudson St, N Y 14
*Bios Labs, 17 W 60 St, N Y 23

DIDYMIUM (Metal)

Di, an element of the rare earth group. In some cases obtained as a by-product from gas-mantle mfr. The pure product is obtained from the refining of various rare earthen salts. Uses—mfr. of didymium salts which are largely used as antiseptics, disinfectants, germicides.

*Bios Labs, 17 W 60 St, N Y 23
Herman Meyer Drug Co, 116-23 Jamaica Ave, Richmond Hill, N Y

DIDYMIUM OXIDE

Di_2O_3. Gray powd. insol. in water or alcohol, sol. in dilute acids.

George F Smith, 60 E 42 St, N Y 17

DIDYMIUM SALTS

Didymium oxide; reddish-brown powder, the mixed oxides of several rare-earth metals. Insol. in water. Sol. in acids, and sol. in molten glasses. Didymium carbonate; pink powd., insol. in water, sol. in acids. Uses—correcting the color of glass and tinting vitreous enamels and ceramic glazes and formation of ceramic bodies with particular properties.

City Chem Corp, 132 W 22 St, N Y 11
George F Smith, 60 E 42 St, N Y 17
*Universal Chem Co, 30 Huntington Ave, Boston, Mass

DIELECTRIC FLUIDS

Preps. used as insulating, cooling, and impregnating mediums in electrical equipment. Mineral oil is widely used, and comparatively new are the chlorinated derivatives of the aromatic hydrocarbons. See also Dishenyl.

*Baker Caster Oil Co, 120 Broadway, N Y 5
*Dow Corning Corp, Midland, Mich

DIETHANOLAMINE

$(CH_2CH_2OH)_2NH$. M.W. 105.09. Straw colored liq. Sp. gr. 1.090-1.000 (20/20°C). Wt. per gal., 9.1'11 lbs. (20°C). B.P. 268°C. M.P. 28°C. .01 N. solution has a pH of 8.888. Entirely sol. water; miscible most organic solvents. Uses—absorbent for acid gases; softening and moistening agent; synthesis organic compound by esterification of the hydroxy groups of diethanolamine or by its condensation with aldehydes. Grades—tech.

American Firstoline Corp, 420 Lexington Ave, N Y
J M Baird Co, 147 Nassau St, N Y
Barclay Chem Co, 75 Varick St, N Y
*Carbide & Carbon Chem Co, 30 E 42 St, N Y 17

Siegel Chem Co, 1 Hanson Pl, Bklyn 17 N Y

DIETHOXY ETHYL PHTHALATE

$C_6H_4(COOC_2H_4O.C_2H_5)_2$. M.W. 310. B.P. at 4 mm, 204-214°C. Sp. gr. at 20°C 1.120. Lbs. per gal. 9.33. Water-white ester, freezes at 30°C. Uses—plasticizer for nitrocellulose and Vinylite; good resistance to heat, light and moisture. Neutral, odorless, waxy solid with excellent plasticizing properties.

Griffin Chem Co, 1000 16 St, San Francisco 7, Cal
Stoney-Mueller, Page & Newark Ave, Lyndhurst, N J

DIETHYL AMINE

$(C_2H_5)_2NH$. Colorless, inflam., liq. Sp. gr. 0.710. B.P. 56°C. Sol. water, alcohol. Uses—mfr. intermediate chemicals, dyes, etc. Grades—tech.

*Carbide & Carbon Chem Co, 30 E 42 St, N Y 17
Cole Labs, 42-25 9 St, L I C 1, N Y
*Sharples Chem, 123 S Broad St, Phila 9, Pa

DIETHYL AMINO ETHANOL

$(CH_3CH_2)_2N.CH_2CH_2OH$. A colorless liq. with amine-like odor. B.P. 160°C. Sp. gr. at 20/4°C of 0.884. Sol. water, slightly hygroscopic. Av. weight, 7.37 lbs. per gal. at 20°C. Uses—synthesis of novocaine.

*Carbide & Carbon Chem Co, 30 E 42 St, N Y 17
*Sharples Chem, 123 S Broad St, Phila 9, Pa

DIETHYL ANILINE

$(C_2H_5)_2N.C_6H_5$. M.W. 149.13. Colorless cryst. Alpha. Sp. gr. 0.934. M.P. —34.5°C. B.P. 216.3°C. Sol. alcohol, ether, chloroform; insol. water. Uses—mfr. intermediates, dyes, organic chemicals, pharmaceuticals. Grades—technically pure.

Barclay Chem Co, 75 Varick St, N Y
*Ciba Co, 627 Greenwich St, N Y 14
Fallek Products Co, 163 Broadway, N Y 6

DIETHYLANILINES see Xylidines (Mixed)

DIETHYL BENZENE

$C_6H_4(C_2H_5)_2$. B.P. range 179.8-184.8°C at 760 mm.; sp. gr. 0.0865 at 25/25°C; dielectric constant 2.22; flash pt. 56°C; fire pt. 63°C. Uses—solvent, low boiling transfer medium, intermediate. Grades—tech.

*Dow Chem Co, Midland, Mich
*Koppers Co, Koppers Bldg, Pittsburgh 19, Pa

N, n-DIETHYL BENZENE SULFONAMIDE

DIETHYL CARBONATE (Diatol, Ethyl Carbonate)

$C_2H_5CO_3C_2H_5$. M.W. 118.08. Colorless liq., pleasant odor. Sp. gr. 0.9870. M.P. —43.0°C. B.P. 125.8°C. Sol. alcohol, ether. Uses—solvent nitrocellulose and lacquers. Grades—tech.

J M Baird Co, 147 Nassau St, N Y

DIETHYL ETHANOLAMINE

*Carbide & Carbon Chem Co, 30 E 42 St, N Y 17
Kingston Chem Co, 15 William St, N Y 5
*Sharples Chem, 123 S Broad St, Phila 9, Pa

DI-2-ETHYLHEXYL ADIPATE

$[C_2H_4COOCH_2CH(C_2H_5)C_4H_9]_2$. M.W. 370. Light colored oily liq. Mid. B.P. at 4 mm 213°C. F.P. —70°C. Uses—primary plasticizer, imparts permanent flexibility, U-V light stability, low temp. flex. low water extraction.

Griffin Chem Co, 1000 16 St, San Francisco 7, Cal
*Kessler Chem Co, State Rd & Cottman Ave, Phila 35, Pa
Stoney-Mueller, Page & Newark Ave, Lyndhurst, N J

DI-2-ETHYLHEXYLAMINE (Dicetylamine)

$[C_4H_9CH(C_2H_5)CH_2]_2NH$.

*Carbide & Carbon Chem Co, 30 E 42 St, N Y 17

DIETHYLHEXYLETHANOLAMINE Di (2-Ethylhexy) Ethanolamine

$(C_4H_9CH(C_2H_5)CH_2)_2NC_2H_4OH$. M.W. 286.33. Insol. water. Uses—chemical intermediate.

*Carbide & Carbon Chem Co, 30 E 42 St, N Y 17

DI-2-ETHYLHEXYL PHTHALATE

*Barrett Div, 40 Rector St, N Y 6
*Carbide & Carbon Chem Co, 30 E 42 St, N Y 17

DIISOBUTYL AZELATE

$(CH_2)_7(COC_4H_9)_2$. M.W. 268. Light straw colored liq. with mild odor. Boil. range at 4 mm 168-191°C. Uses—plasticizer suitable where low temperature flexibility is required.

Fred L Brooke Co, 3340 N Halsted St, Chicago, Ill

DIISOBUTYL KETONE

$(CH_3)_2CHCH_2(CO)CH_2CH(CH_3)_2$. A colorless liq. miscible with most organic liq., but not with water. B.P. 168.0°C. Has a xylene dilution ratio of 1.5. Has excellent solvent power for rubber, ni rocellulose and synthetic resins, a stable, slow-evaporating solvent.

C P Chem Solvents, 60 Park Pl, Newark 2, N J
*Carbide & Carbon Chem Co, 30 E 42 St, N Y 17
Griffin Chem Co, 1000 16 St, San Francisco 7, Cal
L J & M La Place, Leliarts Lane, E Paterson, N J

DIISOBUTYLENE

$(CH_3)_3CCHC(CH_3)_2$. M.W. 112.12. B.P. 102.6°C: $d\frac{20}{4} = 0.8159$; $N\frac{20}{D} = 1.410$; sol. water. Com. product in mixture 80% 2, 4, 4 trimethyl pentene —1, and 20% 2, 4, 4 trimethyl pentene —2. Water-white in color. Uses—as a solvent where its close boiling range, 100-103°C, is of value; in chemical synthesis; mfr. of resins average weight at 20°C 5.97 lbs. per gal.

*Atlantic Refining Co, 260 S Broad St, Phila, Pa
*Enjay Co, 15 W 51 St, N Y 19

DIISOOCTYL ADIPATE

$(C_8H_{17})_2(COO)(CH_2)_4$. M.W. 370. Light straw-colored liq. Uses—plasticizer for vinyl resins and synthetic rubbers.

*Griffin Chem Co, 1000 16 St, San Francisco 7, Cal
*Hardesty Chem Co, 41 E 42 St, N Y
*Kessler Chem Co, State Rd & Cottman Ave, Phila 35, Pa
*Naugatuck Chem, Naugatuck, Conn
*Ohio-Apex, Nitro, W Va

DIISOBUTYLENE

Colorless liquid at room temperature and atmospheric pressure. Used in manufacture of isobutylene and polyisobutylene. Intermediate in preparing other chemicals.

TETRAPROPYLENE

Consists mainly of the tetramer, with small percentages of C 13, C 14, and C 15 olefins. Most useful for the alkylation of such aromatic hydrocarbons as benzene, toluene, xylene, and naphthalene, and phenolic materials such as phenol and cresol. A preferred material in a number of synthetic methods for making higher alcohols, mercaptans, alkyl halides, and other widely used products.

1,3-DIISOPROPYLTHIOUREA

$(CH_3)_2CHNHCSNHCH(CH_3)_2$. M.W. 160.3 calo. grayish-white powd. Melt. range 140-145°C. Sol. conc. acid. Uses—corrosion inhibitor.

*Sharples Chem, 123 S Broad St, Phila 9, Pa

DILUENTS, LACQUER

Active resin solvents which assist in the blending and compounding of specific resins with the nitrocellulose, cellulose, or other ingredients, thus modifying flow and vaporization characteristics. The more commonly used are benzol, toluol, xylol, various organic solvents, and petroleum solvents, specially fractionated for the lacquer industry. Products are specially treated in order that traces of objectionable nauseous odors are removed, as well as corrosive constituents. Grades—Light Fraction: This is used to replace benzol, all or in part, in fast drying lacquers. Rate of evaporation is similar to that of benzol. Medium Fraction: This is used to replace toluol, all or in part, in spraying lacquers for the automobile and furniture trade. Rate of evaporation is similar to that of toluol. Heavy Fraction: This is used to replace xylol, all or in part, in slower drying lacquers. Rate of evaporation is similar to that of xylol. Very Heavy Fraction: This is used in brushing lacquers for the architectural field. Evaporation rate is roughly similar to that of turpentine.

dioctyl phthalate (DOP)

• Eastman offers dioctyl phthalate with an exceptionally low color and of uniform and dependable quality in both an electrical and a non-electrical grade. DOP is probably the best all-purpose plasticizer known for polyvinyl resins and also finds use with a wide variety of other materials, including polymethyl methacrylate, the cellulosics and synthetic rubber. Available in drums, compartmented and full tank cars.

TENNESSEE EASTMAN COMPANY
Division of Eastman Kodak Company

DIPHENYL CARBAZIDE

$(C_6H_5NHNH)_2CO$.

*Fine Organics, 211 E 19 St, N Y 3
*Matheson Co, Paragon Div, E Rutherford, N J

DIPHENYL CARBONATE

$(C_6H_5)_2CO_3$. M.W. 214. White crystalline solid. M.P. 78°C. B.P. 302°C; 168°C (15 mm). Insol. in water, sol. in hot alcohol, ether, acetic acid, acetone, and most aromatic solvents. Volatility of 22.0% compared with 100% for camphor. Compatible with cellulose acetate, effecting ready solution to form a clear and uniform plastic comparable to that formed with camphor. It is similarly recommended for ethyl cellulose plastic. Forming odorless and less combustible plastic with nitrocellulose, it lends itself for substitution of up to 50% of the camphor content of such plastics.

DISCHARGE AGENTS, TEXTILE

Usually a reducing agent most common of which is sodium hydrosulfite. Used to reduce the ground color in discharge printing on silk, cotton or rayon fabrics, as an ingredient in vat dyeing and as a stripper to remove dyestuffs from fabrics for redyeing. There are several proprietary products for special stripping purposes where hydrosulfite is ineffectual or unsuitable.

DISINFECTANTS, COAL TAR

Coal tar disinfectants owe their potency largely to the phenolic compounds they contain and are made in emulsion and sol. types. The emulsion type is made from tar acid oils, soaps (frequently rosin soap) and water, and when diluted for use in water form whitish emulsions. They are mfr. with phenol coefficients ranging from 2 to 20. The sol. type is made from tar acids, usually cresols and xylenols, soap, alkali and water and from clear or sl. analescent solutions when diluted with water for use. Liquor cresolis compositus U.S.P. XI is a soluble type disinfectant made according to the specification of the U.S. Pharmacopoeia. The Bureau of Animal Industry (B.A.I.) type is another example of the sol. type coal tar disinfectant.

KOPPERS
Divinylbenzene
DVB, 40-50% DVB, 20-25%

● Divinylbenzene is useful both as a chemical intermediate and as a starting material for the preparation of specialty copolymers and resins. Divinylbenzene is used for the production of "super processing" GR-S synthetic rubbers, for potting and laminating resins, for modified drying oils, for synthetic ion exchange resins.

DITHYMOL DIIODIDE see Thymol Iodide

DI-o-TOLYLGUANIDINE

$NH.C(NH.CrC_7H_7)_2$. White powd. Sp. gr. 1.10. M. P. 179°C. Sol. alcohol, water. Uses—rubber accelerator.

*Calco Chem Div, Bound Brook, N J
*E I Du Pont de Nemours & Co, Organic Chem Dept, Rubber Chem Div, Wilmington 98, Del
*Specialty Resins Co, 2801 Lynwood Rd, Lynwood, Cal
Witco Chem Co, 295 Madison Ave, N Y 17

DIURETIN see Theobromine Sodium Salicylate

DIVI DIVI

Fruit of Caesalpinia copiaria. Habitat—West Indies. Uses—tanning leather. Grades—pods; extract.

*American Cyanamid Co, Industrial Chem Div, 30 Rockefeller Plaza, N Y 20
American Dyewood Co, 285 Madison Ave, N Y
Dalton-Cooper, 200 W 34 St, N Y

DIVINYL see Butadiene

DIVINYL BENZENE

$C_6H_4(CH.CH_2)_2$. M.W. 130.60. Tan liq. Uses—cross-linking agent in certain polymers; polymerizes with itself to form tough, insol., infusible resins.

*Dow Chem Co, Midland, Mich
*Koppers Co, Koppers Bldg, Pittsburgh 19, Pa

DL VALINE

*Bios Labs, 17 W 60 St, N Y 23
*Dow Chem Co, Midland, Mich
*Smith-N Y Co, 61 Hampton Pl, Freeport, N Y
*Winthrop-Stearns, 1450 Broadway, N Y 18

DODECANOYL PEROXIDE see Lauroyl Peroxide

1-DODECENE

*Humphrey-Wilkinson, De Vine St, N Haven, Conn
*Metropolitan Chem Co, 17 W 60 St, N Y 23

DODECYL BROMIDE see Lauryl Bromide

DODECYL DISULFIDE (Di-tert.)

$(C_{12}H_{25})_2S_2$. M.W. 433.62. B.R. 266-409° C. Uses—chemical intermediate.

Cabell Chem Co, 101 22 St, Huntington, W Va
*Phillips Petroleum Co, Market Development Div, Bartlesville, Okla

DODECYL IODIDE

*Halogen Chem, 1505 Charlton Dr, Columbia, S C

DODECYL MERCAPTAN

*Bios Labs, 17 W 60 St, N Y 23
*Hooker Electrochem Co, 4715 Buffalo Ave, Niagara Falls, N Y

DODECYL MERCAPTAN (tert.)

$C_{12}H_{25}SH$. Sp. gr. 0.871 at 60/60°F. B.P. 224-232°C. Purity 97% (hydrocarbon impurity). Suggested uses—organic synthesis; pharmaceuticals, insecticides, fungicides, solvent, polymerization modifiers and as an additive in rubber and plastics.

*Phillips Petroleum Co, Market Development Div, Bartlesville, Okla
*Sharples Chem, 123 S Broad St, Phila 9, Pa

DODECYL TOLUENE

DOLOMITE (Bitter Spar, Brown Spar, Rhombic Spar)

$CaMg(CO_3)_2$. White, solid crystalline. Sp. gr. 2.89—2.924. Sol. acids. Uses—mfr. magnesium compounds, potteries, porcelains, glazes for ceramic ware, cement, plaster, brick and building stone, refractory linings for metallurgical furnaces; in fertilizers.

Bradley & Baker, 155 E 44 St, N Y 17
Stanley Doggett, 75 Varick St, N Y 13

DRAGON'S BLOOD (Sanguis Draconis)

Resinous exudation from fruit of palm trees. Red, solid amorp., odorless. Natural. M.P. 120°C. Sol. alcohol, ether, volatile and fixed oils, chloroform, etc. Uses—coloring for lacquers, plasters, paper, marble, stoneware, toilet preps., pigments, tanning extracts, tooth-powder, furniture polish, paints, varnishes, lithography, process engraving; in medicine. Grades—tech. (Calamus Draco); reeds; mass; powd.

DYES, ANILINE

Perhaps most important member is aniline black. Largely used on calico printing. Applied generally by either of two methods: oxidation or single bath method.

DYES, BASIC

Derived from ammonia by replacement of one or more hydrogen atoms of one or more molecules of ammonia with various other elements or groups of elements. Basic in character, hence the name. Combines readily with silk and wool without aid of mordants, producing brilliant shades. Uses—on leather, paper and various textile fibers.

DYES, CHROME

Intermediate in character between acid and mordant colors. Resemble acid colors in that they may be dyed directly upon wool in an acid bath and at the same time resemble the mordant colors in that they may be dyed upon metallic mordants. Uses—extensively on men's and women's wear. Possess good fastness to light, acids, washing, perspiration, spotting, etc.

CALCO

meets all your dyeing and printing needs

Calco offers the textile dyer and printer a complete line of the highest quality dyes developed to give the maximum efficiency and economy in dye applications. Whatever your dyeing needs, Calco can supply them.

Nomenclature	Dye Classification	Use on Fibers Listed
CALCO® ACETATE	Direct on Acetate	Cellulose acetate and nylon
CALCOCHROME*	Mordant Acid (Chrome)	Leather and wool
CALCOCID*	Acid	Lakes, leather, nylon, silk and wool
CALCODUR*	Direct (of superior light fastness)	Cotton, linen, paper and viscose
CALCOFAST* WOOL	Acid (Metallized)	Nylon and wool
CALCOFLUOR* WHITE	Direct (Fluorescent White)	Cotton, linen, viscose and wool
CALCOFORM*	Direct Formaldehyde	Cotton, linen and viscose
CALCOGENE*	Sulfur	Cotton, linen and viscose
CALCOLOID*	Vat (Highly dispersed)	Cotton, linen, silk, wool and viscose
CALCOMINE*	Direct	Cotton, leather, linen, silk, nylon, paper, union and viscose
CALCOMINE DIAZO*	Direct and Developed	Cotton, leather, linen, silk and viscose
CALCO® NAPHTHOSOLS	Insoluble Azo and Developers	Cotton, linen and viscose
CALCONYL*	Azoic	Printing cotton, linen and viscose
CALCOPHENYL*	Oxidation	Printing acetate, cotton and viscose
CALCO® RAPID	Azoic	Printing cotton, linen and viscose
CALCOSOL*	Vat	Cotton, wool and viscose
CALCO® SOLUBLE VAT	Leuco Vat Esters	Cotton, linen, silk and wool
CALCOTEX*	Resin Pigment	Printing cotton, linen and viscose
CALCOTONE*	Pigment (Water dispersed)	Cotton, linen, paper and viscose
CALCOZINE*	Basic	Cotton, lakes, leather, paper, silk and viscose

DYES, COTTON

Dyes for cotton include the direct or substantive dyes which are water sol. products that dye cotton directly without the use of a mordant; the basic dyes which are water sol. dyes but which require that the cotton be first mordanted, usually with tannic acid and antimony salts; the sulfur dyes, insol. in water but sol. in sodium sulfide, from which solution they dye cotton directly; the vat dyes, insol. in water but sol. in caustic soda and sodium hydrosulfite. The vat dye solution possesses a direct affinity for the cotton and, by subsequent oxidation, reproduces the original insol. form of the dyestuff. In general the vat dyes possess the best fastness to washing and light; the direct dyes in general are of moderate to fair fastness to washing and from moderate to very good fastness to light; the basic dyes are poor in light fastness but are extremely bright; more so than any other class of cotton dyes; the sulfur dyes may be considered as being faster than the direct dyes but not as fast as the vats. Many of the direct dyes can be after-treated with metallic salts or with formaldehyde with a consequent increase in fastness either to light or to washing. Another group of direct dyes, commonly called development dyes, are applied in a similar manner to the usual direct dyes but, by subsequent diazotization and development, yield shades rather faster to washing. Another group of dyes for cotton is the Naphthol dyes, generaly of good fastness to light and washing. These dyes are formed directly on the fibre itself.

DYES, LEATHER

Basic, acid, direct, chrome and developed dyes are used on leather. Basic dyes are used on all types of leather and require a vegetable tannage as a mordant; they are also used for topping acid, direct, chrome and developed dyes, where strength and brightness are required. Acid dyes are used on all classes of leathers and tannages where level dyeing is required. The exceptionally soluble acid

DYES, LEATHER, continued

dyes are used where penetration is desired, as on suedes which are buffed after dyeing. Acid dyes also are used in finishes for grain leathers and edge inks. Direct dyes are surface dyeing dyes and are used principally on chrome leathers, also in combination with acid dyes and chrome dyes. Chrome dyes are used in the same manner as acid dyes on both chrome and vegetable tanned leathers. Developed dyes are used on chrome tanned leather where very good fastness to washing is required.

DYES, MIXED FIBRES, COTTON & RAYON

Cotton dyes, usually the direct or substantive type, are used for dyeing cotton and rayon fabrics. Since both of these fibres consist of cellulose and differ in their affinity for dyestuff, considerable care must be taken to select dyes and to conduct the dyeing operation so that a shade as uniform as possible will be obtained on both fibres.

DYES, NATURAL

Substances derived from natural sources in contrast with synthetically produced dyes. Employed for special purposes. Produced by some form of extraction, usually water, followed by a concentration. See Annatto, Chlorophyll, Cochineal, Cutch, Fustic, Indigo, Logwood Extract, Madder, Nutgalls, Osage Orange Extract, Quercitron Bark, Turmeric, etc.

DYES, PAPER

Specialized dyes added to the pulp and fixed either by direct absorption or by precipitation. There are three general classifications:—1. Basic dyestuffs (precipitated in combination with acids); 2. Acid dyes (precipitated in combination with certain bases); and 3, the so-called "cotton" dyes which are readily absorbed by the cellulose fibres. Natural Dyestuffs, such as Logwood, Sap Brown, etc., are also used. See also Pigments, Paper; Pigments, Blue, Red, Yellow, Brown; Mineral, Chemical, etc.

*Company classifies itself as manufacturer or producer of this product

DYES, RAYON

Rayon is dyed using the same dyes as cotton. The direct dyes are used where simplicity of application is desired or where fastness requirements are not severe. Sulfur and, more particularly, vat dyes are used whenever the best fastness is desired.

DYES, RESIN

Molded plastics are colored with dyes from the various groups, especially selected to withstand the heat and the various chemicals used to disperse or dissolve readily during molding and to possess the necessary fastness properties. Cast resins are dyed with dyes especially selected from the various dye groups in regard to solubility in the resin and ability to withstand the reducing action in the kettle.

DYES, SILK

Silk (as for instance silk hosiery and silk dress goods) is usually dyed with acid or direct dyes. For silk dress goods it often is desirable that the dyes be readily discharged with hydrosulfite in order to produce various patterns.

DYES, WOOL, continued

light fastness are the principal requirements. They are easily and quickly applied. Where particularly good fastness to washing, fulling and light are desired the chrome dyes are used. These are more expensive to apply as they require a longer time than the acid dyes.

DYNAMITE

A general term covering a large number of specific products, but essentially it is a combination of a high explosive, such as nitroglycerin, with certain oxidizing salts and suitable absorbents. For certain uses nitro-cotton may be added to dynamite. Dependent upon the amount added, a more or less gelatinous product is made which is classed as "gelatin dynamite." See explosives.

EMULSIFIERS

Protective colloids which intimately mix and disperse dissimilar materials ordinarily immiscible to produce a stable finished material. Examples of immiscible materials that are emulsified are oil and water, wax and water, and powd., such as abrasives, with either water, wax or oils.

ENAMEL WHITE see Lithopone

ENAMELS, ACID-RESISTING (Enamels Defined)

Official A.S.T.M. definition "A special kind of paint which flows out to a smooth coat when applied and dries to a smooth, glossy, relatively hard, permanent solid when exposed in a thin film to the air. An enamel always contains a pigment and has considerable hiding power and color. Some enamels dry to a flat or eggshell finish instead of a gloss finish." Specially prepared enamels because of certain ingredients exhibit the characterisic of being very acid resistant.

*Sherwin-Williams Co, 100 Park Ave, N Y 17
*Zophar Mills, 116 26 St, Bklyn 32, N Y

ENAMELS, BREWERS

Enamels, largely formulated with heat reactive phenolic solutions, used on the inside of beer drums and tanks containing alcoholic beverages, as a protective coating. Must not be sol. even to the slightest degree, in alcohol, and must not impart any taste, oder or flavor to the contents.

*Dehls & Stein, 237 South St, Newark 5, N J

ENAMELS, CONCRETE

Specially formulated enamels for application to concrete, masonry, brick, etc., to give semi- or full-gloss finish and a protective coating. Should be particularly impervious to water, acids, alkalies, etc. Largely used on concrete floors. Should wear well, should not crack or chip and should stand up under repeated washings. Some products in this classification are formulated with a rubber base.

*Armstrong Paint & Varnish Works, 1318-1500 Kilbourn Ave, Chicago, Ill
*Atlas Mineral Products Co, 39 Walnut St, Mertztown, Pa

*V J Dolan & Co, 1830 N Laramie Ave, Chicago 39, Ill
*E I Du Pont de Nemours & Co, Fabrics & Finishes Dept, Wilmington 98, Del
*Sherwin-Williams Co, 100 Park Ave, N Y 17
*Yarnall Paint Co, Grays Ave W of 54 St, Phila 43, Pa

ENAMELS, GLASS

Pigmented finely ground glasses, usually melting between 540 and 600°C. Used for coloring the entire surface of glassware or decorating glassware with colored designs.

Arco Co, 7301 Bessemer Ave, Cleveland 27, Ohio
*Atlas Powder Co, Industrial Finishes Dept, Canal & Ludlow Sts, Stamford, Conn
*E I Du Pont de Nemours & Co, Electrochem Dept, Wilmington 98, Del
Vitro Mfg Co, 60 Greenway Dr & Corliss Sta, Pittsburgh, Pa

ENAMELS, METAL

Coatings specially formulated for application to metal surfaces. Should have special bonding properties. Usually supplied for baking, spraying, or brushing application.

*Atlas Powder Co, Industrial Finishes Dept, Canal & Ludlow Sts, Stamford, Conn
*Baltimore Paint & Color Works, 150 S Calverton Rd, Baltimore 23, Md
*Barrett Varnish Co, 1532 S 50 Court, Cicero 50, Ill
*Better Finishes & Coatings, 268 Doremus Ave, Newark 5, N J
*V J Dolan & Co, 1830 N Laramie Ave, Chicago 39, Ill
*E I Du Pont de Nemours & Co, Fabrics & Finishes Dept, Wilmington 98, Del
*Duralac Chem Corp, 84 Lister Ave, Newark 5, N J
*Maas & Waldstein Co, 438 Riverside Ave, Newark, N J
*Merrimac Div, Monsanto Chem Co, Boston 49, Mass
*Midland Industrial Finishes Co, E Water St, Waukegan, Ill

ENAMELS, METAL, continued

*Old Colony Paint & Chem Co Labs, 620 Lamar St, Los Angeles 31, Cal
*Sherwin-Williams Co, 100 Park Ave, N Y 17
*United Chromium, 100 E 42 St, N Y
*Yarnall Paint Co, Grays Ave W of 54 St, Phila 43, Pa

ENAMELS, OIL-PROOF

Finishing enamels, oil resistant and usually also water, alkali, and heat resistant, finding wide application on motor frames, housings, engines, and all types of metal products. They are produced either for baking, for spraying, dipping or brushing. See also Varnishes, Engine.

*Atlas Powder Co, Industrial Finishes Dept, Canal & Ludlow Sts, Stamford, Conn
*E I Du Pont de Nemours & Co, Fabrics & Finishes Dept, Wilmington 98, Del
*Sherwin-Williams Co, 100 Park Ave, N Y 17

ENAMELS, PIPE-LINE

Enamels made with an asphalt or tar base and often reinforced with asbestos fillers.

*Atlas Mineral Products Co, 39 Walnut St, Mertztown, Pa
*Barrett Div, 40 Rector St, N Y 6
*Koppers Co, Koppers Bldg, Pittsburgh 19, Pa
Reilly Tar & Chem Corp, 1615 Merchants Bank Bldg, Indianapolis 4, Ind
*Sherwin-Williams Co, 100 Park Ave, N Y 17

ENAMELS, PORCELAIN

*Atlas Powder Co, Industrial Finishes Dept, Canal & Ludlow Sts, Stamford, Conn

ENAMELS, REFRIGERATOR

Enamels with strong adhesion, flexibility, heat resistance, etc., used in place of vitreous enamels for coating refrigerators, range and stove parts; supplied for wood or metal and for air dry or bake.

*Arco Co, 7301 Bessemer Ave, Cleveland 27, Ohio
*Atlas Powder Co, Industrial Finishes Dept, Canal & Ludlow Sts, Stamford, Conn
*Baltimore Paint & Color Works, 150 S Calverton Rd, Baltimore 23, Md

*E I Du Pont de Nemours & Co, Fabrics & Finishes Dept, Wilmington 98, Del
*Standard Varnish Works, 2600 Richmond Terrace, S I 3, N Y

ENAMELS, WRINKLY

Specially formulated products which when baked from 10 to 20 minutes in an oven in which the gases of combustion are retained, develop a uniform wrinkly texture or stipple finish.

*Atlas Powder Co, Industrial Finishes Dept, Canal & Ludlow Sts, Stamford, Conn
*Maas & Waldstein Co, 438 Riverside Ave, Newark, N J
*New Wrinkle, 105 W Adams St, Chicago 3, Ill
*Sherwin-Williams Co, 100 Park Ave, N Y 17
*Yarnall Paint Co, Grays Ave W of 54 St, Phila 43, Pa

ENGLISH WHITE see Calcium Carbonate

ENZYMES

Catalysts of organic and usually colloid nature having a specific action. They are formed by living cells but are usually independent of the presence of the latter in their operation. Uses—produce hydrolysis (decomp. fats, convert aldehydes into a mixture of acid and alcohol, invert sugars, digest proteins), coagulate (clot blood, curdle milk), reduce or decomp. (latic acid and alcohol fermentations), oxidize (convert alcohol into acetic acid.)

ETCHING COMPOUNDS

Products applied to glass to produce a frosted effect (sometimes termed matted or satin finish): by varying strength and duration of the frosting bath, various effects from a smooth satin finish to a dense white sandpaper-like finish are possible; by covering certain parts with suitable stencils, etc., designs are thus produced.

ETHYL ETHER

Clear colorless extremely volatile liquid with ethereal odor. An excellent solvent for many organic compounds. Used in the extraction of fats, oils and alkaloids, and in the recovery of acetic acid from dilute water solutions. With alcohol it is an excellent solvent for nitrocellulose. Source for pure ethylene.

n-ETHER, BUTYL (Butoxybutane, Butyl Oxide, Dibutyl Ether)

$C_4H_9OC_4H_9$. B.P. 140.9°C. Sp. gr. 0.769. Colorless, stable liq. Miscible most organic solvents; practically insol. water. Forms explosive peroxides. Uses—extraction agent; solvent for gums, resins, oils, organic acids, esters and alkaloids; purifier for other solvents.

*Carbide & Carbon Chem Co, 30 E 42 St, N Y 17

ETHER, CINNAMIC see Ethyl Cinnamate

ETHER, DIBENZYL (Benzyl Ether)

$(C_6H_5CH_2)2O$. Colorless oil. Dens., 1.0428. M.P. 4-5°C. B.P. 295-8°C. Sol. alcohol, ether; insol. water. Uses—plasticizer for synth. rubber, in organic syntheses; laboratory reagent.

Advance Solvents & Chem Corp, 245 5 Ave, N Y 16
*Heyden Chem Corp, 290-300 River Dr, Garfield, N J
*Norda Essential Oil & Chem Co, 601 W 26 St, N Y 1

ETHER, DIBUTYL see Ether, n-Butyl

ETHER, DICHLORODIPHENYL (x-Dichloro [Phenyl Ether])

$Cl_x(C_6HxOC_6Hy)$, where $x + y = 8$. M.W. 239.1. Clear, colorless to pale straw-colored, highly refractive liquid. Completely miscible in acetone, benzene, ether; sol. alcohol, carbon tetrachloride, petroleum ether; insol. water.

*Dow Chem Co, Midland, Mich

ETHER, 2,2'-DICHLORDIISOPROPYL see Ether, Dichloroisopropyl

ETHER, DICHLOROETHYL

$ClCH_2CH_2OCH_2CH_2Cl$. M.W. 143. Chloroform-like odor. Uses—soil fumigation, insecticide; solvent; in textile processes where high temp. are necessary.

*Carbide & Carbon Chem Co, 30 E 42 St, N Y 17
*Dow Chem Co, Midland, Mich
Griffin Chem Co, 1000 16 St, San Francisco 7, Cal
*Mathieson Hydrocarbon Chem Corp, Mathieson Bldg, Baltimore 3, Md

ETHER, DICHLOROISOPROPYL (2,2'-Dichlordiisopropyl Ether)

$ClCH_2(CH_3)CHOCH(CH_3)CH_2Cl$. M.W. 171. High boiling liq. Uses—in textile processes where high temp. are necessary; solvent; intermediate in mfr. of dyes, resins, certain pharmaceuticals.

*Carbide & Carbon Chem Co, 30 E 42 St, N Y 17

ETHER, DIETHYLENE GLYCOL MONOBUTYL (Butyl Carbitol)

$C_4H_9OCH_2CH_2OCH_2CH_2OH$. M.W. 162.14. B.P. 231.2°C. Sp. gr. 0.9553. Colorless, practically odorless liq. Sol. water, oils. Uses—solvent for nitrocellulose, hydroxylin lacquers, dopes, pyroxylin plastics, printing inks, resins, soaps, oils; mfr. specialty soaps and textile oils.

*Carbide & Carbon Chem Co, 30 E 42 St, N Y 17
*Dow Chem Co, Midland, Mich
Mutchler Chem Co, 258 Broadway, N Y 7

ETHER, DIETHYLENE GLYCOL MONOETHYL (Carbitol)

$CH_2OH.CH_2OCH_2CH_2OC_2H_5$. Colorless liq. B.P. 201.9°C. Sol. alcohol, ether. Uses—mfr. cellulose ester varnishes, plastics; as solvent. Grades—tech.

*Carbide & Carbon Chem Co, 30 E 42 St, N Y 17
*Dow Chem Co, Midland, Mich
Mutchler Chem Co, 258 Broadway, N Y 7

ETHER, DIETHYLENE GLYCOL MONOMETHYL (Methyl Carbitol)

$CH_3OCH_2CH_2OCH_2CH_2OH$. M.W. 120.09. B.P. 193.2° C. Sp. gr. 20/20°C, 1.030 to 1.040. Odor, mild, nonresidual. Water-white liq.; miscible with usual organic solvents, sol. in water. Wt. per gal., 8.61 at 20°C. Uses—solvent for resins, cellulose acetate, nitrocellulose, refined castor oil, shellac, ester gums, waxes, lacquers; mfr. wood stains, cosmetics, textile dyestuffs, printing inks and pastes.

*Carbide & Carbon Chem Co, 30 E 42 St, N Y 17
*Dow Chem Co, Midland, Mich

ETHER, DIMETHYL (Methyl Ether, Methyl Oxide, Wood Ether, Methoxymethane)

CH_3OCH_3. Colorless gas. Dens., 2.091g/1; M.P. -138.5; b.p. -23.65. Sol. water, alchol, ether. Uses—refrigerant; solvent; extraction agent; propellant for sprays.

Republic Chem Corp, 94 Beekman St, N Y 38

ETHER, ETHYL see Ether

ETHER, ETHYLENE GLYCOL DIETHYL

Colorless liq. with sl. ethereal odor. Sol. in water. Uses—mutual solvent for oil and water combinations in detergents and wetting agents. May be used as inert reaction medium.

*Carbide & Carbon Chem Co, 30 E 42 St, N Y 17
*Dow Chem Co, Midland, Mich
Republic Chem Corp, 94 Beekman St, N Y 38

*Company classifies itself as manufacturer or producer of this product

ethyl acetate

• Eastman ethyl acetate is an excellent fast-evaporating solvent for use in lacquers, varnishes, paints and pyroxylin plastics. It may be employed as a process solvent in the manufacture of drugs, perfumes and various chemical intermediates.

Eastman ethyl acetate is normally furnished with ST-115 as denaturant, but special denaturants can be supplied on request. Available in drums, compartmented and full tank cars.

TENNESSEE EASTMAN COMPANY

ISOPROPYL ETHER

Clear colorless liquid with ethereal odor. It has a higher boiling point and a lower vapor pressure than ethyl ether and acetone. Excellent solvent for animal, vegetable and mineral oils, fats, waxes and resins. Because of solvent and low vapor pressure properties it is valuable as an extracting agent. Other uses are: partial solvent for oil soluble dyes, ethyl cellulose solvent, and with alcohol in the formulation of nitrocellulose lacquers.

ETHYL MERCAPTAN

C_2H_5SH. M.W. 62.07. Volatile liq. of extremely strong, "skunk-like" odor. B.P. °C. Sp. gr. 0.840 (25/25°C). Wt. per gal. 7.01 lbs. Flash ponit about 3 F. Uses—warning agent, odorizer, in natural and petroleum fuel gas systems; warning agent indicating overheating of machines, when sealed in a low-metal alloy within the machine.

*Mallinckrodt Chem, 2 & Mallinckrodt Sts, St Louis 7, Mo
*Tennessee Eastman Co, 10 E 40 St, N Y 16
*Union Oil Co of Cal, 617 W 7 St, Los Angeles 17, Cal
Universal Mfg Co, P O Box 2427, Houston 1, Tex

ETHYL METHACRYLATE

$CH_2{:}C\text{-}(CH_3)\text{-}(CO_2)C_2H_5$. M.W. 114. Water-white mobile olatile liq. with pronounced agreeable odor. Uses—polymerization.

Wallace A Erickson & Co, 842 N Wells St, Chicago 14, Ill
*Rohm & Haas Co, Washington Sq, Phila 5, Pa

ETHYL MONOBROMOACETATE

$CH_2BrCOOC_2H_5$. M.W. 167.0. Colorless to sl. yellow liq., very irritating to the eyes. Sp. gr. 1.507 at 25/4°C. Wt. per gal. 12.5 lbs. at 25°C. B.R. 158.0-160.0°C; with slight decomposition; completely miscible alcohol, ether; insol. water. Uses—mfr. tear gases.

*Dow Chem Co, Midland, Mich

ETHYL MONOCHLOROACETATE (Monochloracetic Ether)

$CH_2ClCOOC_2H_5$. Colorless liq., pungent odor. Sp. gr. 1.157 (15°C). B.P. 144°C. Sol. alcohol, ether; insol. water. Uses—mfr. intermediates, organic chemicals. Vapors injurious to eyes. Grades—tech.

*Dow Chem Co, Midland, Mich

ETHYL MONOETHYLAMINE

ETHYL MORPHOLINE

ETHYL MYRISTATE

$CH_3(CH_2)_{12}COOC_2H_5$. M.W. 256.25. Colorless liq. M.P. 12°C. B.P. 295°C. Insol. water; sol. alcohol; sl. sol. ether.

Florasynth Labs, 1513 Olmstead Ave, N Y 61
*Kessler Chem Co, State Rd & Cottman Ave, Phila 35, Pa
*Matheson Co, Paragon Div, E Rutherford, N J

ETHYL NITRATE (Nitric Ether)

$C_2H_5ONO_2$. M.W. 91.05. Colorless liq., pleasant odor. Sp. gr. 1.105. B.P. 88.7°C. Sol. alcohol, ether. Uses—mfr. organic chemicals, intermediates, synth. dyes, drugs, perfumes. Grades—tech.

Republic Chem Corp, 94 Beekman St, N Y 38

ETHYL NITRITE (Nitrous Ether)

C_2H_5ONO. M.W. 75.09. A colorless liq. B.P. 17°C. Sl. sol. water; miscible alcohol, ether. Uses—medicinally as a 15% alcoholic solution, as a diuretic and diaphoretic.

*Bios Labs, 17 W 60 St, N Y 23
*Magnus, Mabee & Reynard, 16 Desbrosses St, N Y 13

ETHYL OLEATE

$C_{17}H_{33}COOC_2H_5$. Uses—solvent, plasticizer, lubricant.

W W Angus, 220 Broadway, N Y
*Kessler Chem Co, State Rd & Cottman Ave, Phila 35, Pa

ETHYL OXALATE (Diethyl Oxalate, Oxalic Ether)

$(C_2H_5)_2(COO)_2$. Water-white liq., aromatic odor. Sp. gr. 1.083 (15°C). B.P. 186.1°C. Sol. alcohol, ether. Decomp. by water. Uses—mfr. perfume prep. dyes, organic chemicals, lacquers. Grades—tech.

*Commercial Solvents Corp, 17 E 42 St, N Y 17
*Smith-NY Co, 61 Hampton Pl, Freeport, N Y
*U S Industrial Chem, 60 E 42 St, N Y

ETHYL PHENYL ACETATE

$C_6H_5CH_2CO_2C_2H_5$. M.W. 164.20. Colorless liq. Sp. gr. 1.033 at 20°C. B.P. 227°C. Insol water. Sol. alcohol, ether.

*American-British Chem Supplies, 180 Madison Ave, N Y
Benzol Products Co, 237 South St, Newark 25, N J
*Edward S Burke, 65 Pine St, N Y
Dodge & Olcott, 180 Varick St, N Y 14

*Verona Chem Co, 26 Verona Ave, Newark, N J

ETHYL PHENYL ETHANOLAMINE

$C_6H_5N(C_2H_5)\ CH_2CH_2OH$. M.W. 165.13. Colorless liq. B.P. 208°C at 740 mm. Sp. gr. 104 at 20°C. Wt. per gal. 8.7 lbs. Sl. sol. in water. Uses—intermediate in mfr. acetate azo dyestuffs and other compounds.

*Carbide & Carbon Chem Co, 30 E 42 St, N Y 17
*Dow Chem Co, Midland, Mich
*Tennessee Eastman Co, 10 E 40 St, N Y 16

ETHYL PHOSPHATE (Triethyl Phosphate)

$(C_2H_5)_3PO_4$. M.W. 182.14. Liq. B.P. 216°C. Sol. alcohol.

*Victor Chem Works, 141 W Jackson Blvd, Chicago 4, Ill

ETHYL m-PHOSPHATE

$(C_2H_5OPO_2)_x$. M.W. 108. Colorless, odorless thick liq. Sol. water with decomposition. Sol. chloroform. Uses—phosphorylating agent.

*Victor Chem Works, 141 W Jackson Blvd, Chicago 4, Ill

ETHYL PROPIONATE (Propionic Ether, Propionic Esthers)

$C_2H_5COOC_2H_5$. Colorless liq. Sp. gr. 0.891. B.P. 99.1°C. Sol. alcohol, ether, water. Uses—solvent nitrocellulose; ingredient of soft drinks and fruit syrups. Grades—commercial.

Dodge & Olcott, 180 Varick St, N Y 14
P R Dreyer, 113 W 19 St, N Y
Florasynth Labs, 1513 Olmstead Ave, N Y 61
*Ford Motor Co, 300 Schaefer Rd, Dearborn, Mich

ETHYL PROPIONYL see Diethyl Ketone

ETHYL PROTOCATECHUIC see Ethyl Vanillin

*Carbide & Carbon Chem Co, 30 E 42 St, N Y 17

ETHYL RICINOLEATE see also Fatty Acid Esters

NO. $C_{17}H_{32}CO_2 \cdot C_2H_5$. Appearance, bright, clear yellow, free from moisture and suspended matter. Dens. 7.74 (1 gal. 15°C). Sp. gr. (929 at 15°C). B.P. 225°C. Uses—paints, lacquers, nitrocellulose coatings.

*Baker Castor Oil Co, 120 Broadway, N Y 5
*Kessler Chem Co, State Rd & Cottman Ave, Phila 35, Pa

ETHYL SALICYLATE

$C_9H_{10}O$. M.W. 166.13. Colorless volatile liq. of pleasant odor and taste. B.P. 231°C. Insol. water, miscible alcohol, ether. Used medicinally as an antiseptic, also as a solvent for nitrocellulose.

*Dow Chem Co, Midland, Mich
P R Dreyer, 113 W 19 St, N Y
Florasynth Labs, 1513 Olmstead Ave, N Y 61
*Givaudan-Delawanna, 330 W 42 St, N Y 18
*Magnus, Mabee & Reynard, 16 Desbrosses St, N Y 13
Polak & Schwartz, 667 Washington St, N Y 14
*Verona Chem Co, 26 Verona Ave, Newark, N J

ETHYL SEBACATE

Florasynth Labs, 1513 Olmstead Ave, N Y 61
*Matheson Co, Paragon Div, E Rutherford, N J
Polak & Schwartz, 667 Washington St, N Y 14
*Verona Chem Co, 26 Verona Ave, Newark, N J

ETHYL SILICATE (Tetraethyl Ortho-Silicate)

$(C_2H_5)_4SiO_4$ is a colorless, faintly odored liq. B.P. 165°C. Water slowly hydrolyzes it to alcohol and silicic acid which in turn dehydrates to an adhesive form of silica. Av. Wt., 7.77 lbs. per gal. at 20°C. Uses—as a preservative for hardening stone and arresting decay and disintegration; used in paints where heat is encountered; mixed with siliceous powders to form weather and acid-proof mortar and cements, refractory bricks and other molded objects.

*Carbide & Carbon Chem Co, 30 E 42 St, N Y 17

*Company classifies itself as manufacturer or producer of this product

ETHYL SODIUM OXALACETATE (Sodium Ethyl Oxalacetate)

$C_2H_5OOC{\cdot}C(OH){:}CH{\cdot}C{\cdot}OOC_2H_5$. M.W. 210.0. Light yellow powd. Used as an intermediate in dye mfr.

*U S Industrial Chem, 60 E 42 St, N Y

ETHYL STEARATE

$C_{17}H_{35}CO_2C_2H_5$. M.W. 312.51. Colorless cryst. M.P. 34.7. B.P. 199-201 @ 10 mm. Insol. water. Sol. ether.

ETHYL SUCCINATE

$COOC_2H_5CH_2CH_2COOC_2H_5$.

*Fine Organics, 211 E 19 St, N Y 3
*Kessler Chem Co, State Rd & Cottman Ave, Phila 35, Pa
Smith-NY Co, 61 Hampton Pl, Freeport, N Y

ETHYL SULFATE see Diethyl Sulfate

n-ETHYL-p-TOLUENESULFONAMIDE

$C_6H_4CH_3SO_2NHC_2H_5$. M.W. 199.3. White solid. Uses—Plasticizer to give hard, tough compositions with sharp softening points.

*Monsanto Chem Co, Organic Chem Div, 1700 S 2 St, St Louis 4, Mo

ETHYL p-TOLUENE SULFONATE (p-Toluene Sulfo Ethyl Ether)

$CH_3C_6H_4(SO_3C_2H_5)$. M.W. 200. White coarsely ground crystalline solid at 20°C. M.P. 33°C. Uses—dyestuff intermediate; ethylating agent.

Smith-NY Co, 61 Hampton Pl, Freeport, N Y
*Verona Chem Co, 26 Verona Ave, Newark, N J

ETHYL TRIFLUOROACETATE

*Bios Labs, 17 W 60 St, N Y 23
*Halogen Chem, 1505 Charlton Dr, Columbia, S C

ETHYL VALERATE (Ethyl Valerianate, Valeric Ether)

$C_4H_9COOC_2H_5$. M.W. 130.11. Colorless liq. B.P. 145.5°C. Sp. gr. 0.877. Ester value 431.5. Miscible alcohol, ether; insol. water. Uses—mfr. flavors, perfumery; in medicine.

Dodge & Olcott, 180 Varick St, N Y 14
P R Dreyer, 113 W 19 St, N Y
Florasynth Labs, 1513 Olmstead Ave, N Y 61

ETHYLENE (Ethene, Etherin, Elayl, Bicarburetted Hydrogen, Heavy Carburetted Hydrogen, Olefiant Gas)

$CH_2{:}CH_2$. M.W. 28.03. Colorless, inflam. gas, sweet odor. Sp. gr. 0.978. B.P. —103.8°C. Liquefies at 0°C. and 42 atmospheres. Solidifies at —169.4°C. Sol. water, alcohol, ether. Uses—mfr. intermediates, organic chemicals mustard gas, synth. ethyl alcohol; in oxyethylene welding and cutting of metals; in medicine. Grades—tech.

*Dow Chem Co, Midland, Mich
Matheson Co, Paragon Div, E Rutherford, N J
*Ohio Chem & Surgical Equipment Co, 1400 Washington Ave, Madison 10, Wis
*U S Industrial Chem, 60 E 42 St, N Y

ETHYLENE ALDEHYDE see Acrolein

ETHYLENE BROMIDE (Dibromoethane, Ethylene Dibromide)

CH_2BrCH_2Br. Colorless liq., chloroform-like odor. Sp. gr. 2.189 (15°C). M.P. 9-10°C. B.P. 129-131°C. Miscible alcohol, ether. Very sl. sol. water. Poisonous. Uses—mfr. organic chemicals, ethylene glycol, piperazin, intermediates, synth. drugs; solvent in making celluloid; in medicine. Grades—tech.

*Dow Chem Co, Midland, Mich
*Eston Chem, 3100 E 26 St, Los Angeles, Cal
Hawkins Chem Co, 3100 E Hennepin Ave, Minneapolis 13, Minn

ETHYLENE BROMIDE (Dibromoethane Ethelene Dibromide), continued

ETHYLENE CHLORIDE see Ethylene Dichloride

ETHYLENE CHLOROBROMIDE (Symmetrical Chlorbromethane)

$CH_2Cl.CH_2Br$. M.W. 143.4. Clear, colorless volatile liq. with a chloroform odor. Sp. gr. 1.790 at 0°C. Wt. per gal. 14.9 lbs. at 0°C. B.P. 106.7°C. F.P. —16.6°C. Miscible with most organic solvents; insol. water. Uses—as a solvent; in organic synthesis.

*Dow Chem Co, Midland, Mich
Thomas A Edison, P O Box 15, Stuyvesant Falls, N Y

ETHYLENE CYANOHYDRIN (B-Hydroxypropionitrile, Hydracrylonitrile)

$HOCH_2CH_2CN$. M.W. 71.05. Straw colored liq. B.P. 277°C. Sol. water, acetone, methyl ethyl ketone, ethanol, chloroform, diethyl ether. Insol. benzene, carbon tetrachloride, naphtha. Uses—solvent, organic intermediate.

American Cyanamid Co, Industrial Chem Div, 30 Rockefeller Plaza, N Y 20
*Rohm & Haas Co, Washington Sq, Phila 5, Pa

ETHYLENE DIAMINE

$NH_2CH_2.CH_2.NH_2$. M.W. 60.08. Colorless liq., ammonia odor. Sp. gr. 0.892. M.P. 8.5°C. B.P. 117°C. Sol. water. Uses—solvent for albumen and the like; in medicine. Grades—tech.

American Firstoline Corp, 420 Lexington Ave, N Y
*Carbide & Carbon Chem Co, 30 E 42 St, N Y 17
*Dow Chem Co, Midland, Mich

ETHYLENE DIBROMIDE see Ethylene Bromide

ETHYLENE DICHLORIDE (Ethylene Chloride, Dichloroethane)

$CH_2Cl.CH_2Cl$. Colorless liq., pleasant chloroform-like odor. M.W. 96.9. Sp. gr. 1.278 (15°/4°C). lbs. gal., 10.7 B.P. 55.0°C. F.P.—80.5°C. V.D. (15°C). lbs./cu. ft., 0.241. Latent Heat of Vap., B.T.U./lb., 127.8. S.H., cal./kg./°C or B.T.U./lb./°F, 0.270 (20°C). Sol. only very sl., sol. in water, alcohol, ether. Uses—mfr. intermediate, ethylenediamine, glycol monosalicylate, glycol monocinnamate, tobacco extracts, organic chemicals, cleaning fluids; extracting nicotine from tobacco; for food fumigating; with alcohol, rubber, soap and degreasing; in medicine. Grades—tech.

GLYCOLS

Ethylene Glycol, Diethylene Glycol, Triethylene Glycol, Propylene Glycol, Dipropylene Glycol, 2-Ethylhexanediol-1,3, Hexylene Glycol, Polyethylene Glycols, Polypropylene Glycols, and other higher diols produced commercially by CARBIDE are important to many industries. They are used in a number of applications as moistening and softening agents and as raw materials in the preparation of resins and plasticizers. In addition, other diols of broad industrial interest are supplied by CARBIDE in developmental quantities.

ETHYLENE GLYCOL MONOETHYL ETHER ACETATE (b-Ethoxyethyl Acetate, Cellosolve Acetate)

$CH_3COOCH_2CH_2OC_2H_5$. M.W. 132.09. Colorless liq. B.P. 156.2. Sol. water, alcohol.

Barclay Chem Co, 75 Varick St, N Y
*Carbide & Carbon Chem Co, 30 E 42 St, N Y 17
*Dow Chem Co, Midland, Mich
Republic Chem Corp, 94 Beekman St, N Y 38

ETHYLENE GLYCOL MONOMETHYL ETHER ACETATE

$CH_3OCH_2CH_2CO_2CH_3$. M.W. 118.08. B.P. 143.0°C. Sp. gr. 1.005 at 20/20°C. Colorless, stable liq. Miscible with most organic solvents; completely sol. water. B.R. 130-155°C. (760 mm). Sol. in hydrocarbons, ethyl alcohol and acetate. Wt. per gal., 8.37 lbs. per gal. at 20°C. Uses—solvent for cellulose nitrate, gums, resins, oils; mfr. lacquers, dopes.

*Carbide & Carbon Chem Co, 30 E 42 St, N Y 17
*Dow Chem Co, Midland, Mich
Republic Chem Corp, 94 Beekman St, N Y 38

ETHYLENE IODIDE

CH_2ICH_2I. Yellow monoclinic prisms from ether. M.W. 281.89. Sol. in alcohol, sl. sol. in water. Uses—intermediate in organic syntheses.

*Edcan Labs, 10-20 Pine St, S Norwalk, Conn

ETHYLENE OXIDE

CH_2OCH_2. Colorless gas at ordinary temp., at low temp. a mobile, colorless liq. B.P. 10.7°C. Sp. gr. of liq. Ethylene Oxide is .8707 at 20./20°C. Miscible water in all proportions; sol. in usual organic solvents. Uses—fumigation, synthesis.

*Carbide & Carbon Chem Co, 30 E 42 St, N Y 17

EUCATROPINE

$C_{17}H_{23}NO_3$. HCl. M.W. 327.76. Technical name: phenylglycoly methylvinyl-diacetonalkamine hydrochloride. White, fine granular powd. having no odor, M.P. not below 183°C. Sol. in water, alcohol and chloroform; insol. in ether. Uses—as a mydriatic in ocular medicine, similar in action to atropine, but said to be free from anaesthetic and irritative action.

*Bios Labs, 17 W 60 St, N Y 23

EUNATROL see Sodium Oleate

EXPLOSIVES, AGRICULTURAL, INDUSTRIAL

Specially formulated explosives prepared for the typical blasting problems, such as stump blasting, deep cultivation or subsoiling, tree planting, tree rejuvenation, land drainage, ditching, stream correction, control of erosion, filling of gullies, vertical drainage of wet spots, etc. Also specialty formulated compounds for use in road building, construction, deepening of harbors, excavating, etc. See also dynamite. Mfrs. in all cases provide specific recommendations which should be followed closely.

EXTRUDING COMPOUNDS

Synth. resin plastics which are not compressed or hardened in a closed mold, but which are treated in a mold open at the inlet and outlet sides. With increasing pressure the mass passes from the solid to the plastic state, and is then gradually hardened, all the time being in periodical or continual motion. On the discharge side of the extruding machine special devices are used to form the material as it emerges into various shapes. For suppliers see Molding Powders Plastic.

FALSE SAFFRON see Saffron, American

FAT LIQUORS

Process of "fat-liquoring" comprises three distinct operations: coloring, filling, and oiling, but often all are done to one step. Fat-liquoring proper consists of filling leather with soaps, oils, starch, china clay, tallow, egg yolk, and a number of other materials to strengthen the fibres and render the leather soft and pliable, at the same time giving it the desired color. Process is usually carried out at a high temp. in the drum tumbler and changes the leather to black or colors. Prepared fat-liquors are scientifically compounded products containing a wide variety of substances, depending upon the producer and the type of leather to be processed.

FATTY ACID ESTERS

Various esters of the fatty acids, such as stearic, oleic, linoleic, ricinoleic, etc. The fatty acids are produced by the removal of the glyceride content from neutral oils and fats, either by chemical or mechanical means. The resultant fatty acids are then distilled under vacuum of varying degrees and varying temp.

FERRIC TERSULFATE see Ferric Sulfate

FERRIC THIOCYANATE (Ionic Sulfocyanide, Ferric Rhodanate, Ferric Thiocyanide)

$Fe(CNS)_3 3H_2O$. M.W. 284.1. Dark red cryst. or brown granular powder. Sol. water, alcohol, ether. Decomp. on heating.

*City Chem Corp, 132 W 22 St, N Y 11

FERRIC TRICHLORIDE see Ferric Chloride

FERRIC TRIOXIDE see Iron Oxide, Red

FERRITE YELLOW see Iron Oxide, Yellow

FERROCHROMITE see Chromite

FERRO MANGANESE

An alloy of 50% iron and 50% manganese. Sp. gr. 7.0. M.P. 1325°C. Uses—mfr. of tough steels.

*Anaconda Copper Mining Co, 25 Broadway, N Y 4
S H Bell Co, 1514 Oliver Bldg, Pittsburgh 22, Pa
Chematar Inc, Exchange Pl, N Y 5
*Foote Mineral Co, Chelten Bldg, Phila, Pa
*New Jersey Zinc Sales Co, 160 Front St, N Y 38
*Sloss-Sheffield Steel & Iron Co, 3131 1 Ave, N Birmingham 2, Ala
*Tennessee Products & Chem Corp, First American National Bank Bldg, Nashville, Tenn
Wah-Chang Corp, 233 Broadway, N Y 7

FERRO MOLYBDENUM (Alloy)

Composed principally of iron and molybdenum; marketed in two grades containing either a max. of 0.5 or 2% carbon. M.P. 2,965°F. Uses—increases tensile strength, hardenability, elongation, elastic limit, impact, fatigue, and high-temp. strength values of steel.

*Climax Molybdenum Co, 500 5 Ave, N Y 18
Wah-Chang Corp, 233 Broadway, N Y 7

FERROPHOSPHORUS

Special alloy of iron and phosphorus, usually in 2 grades: 1. 17-19% phosphorus; 2. 23-25% phosphorus. Uses—to increase fluidity of iron and steel castings; in sheet steel to prevent sticking of sheets in final rolling; in wire to give stiffness and better surface for drawing.

*American Agricultural Chem Co, 50 Church St, N Y 7
*Metallurg Inc, 100 Park Ave, N Y 17
Republic Chem Corp, 94 Beekman St, N Y 38
*Victor Chem Works, 141 W Jackson Blvd, Chicago 4, Ill
*Virginia-Carolina Chem Corp, 401 E Main St, Richmond 5, Va
*Westvaco Chem Div, 405 Lexington Ave, N Y 17

FERROSILICON

Alloys of iron and silicon used in steel industry. Uses—to deoxidize steel for high grade forgings, rolled products, and castings; used in small doses in effervescing steel to clean up the bath. Grades—various, silicon content running from 14% to 94%. Available crushed or in lumps up to 50 lbs.; and in pigs up to 100 lbs.

S H Bell Co, 1514 Oliver Bldg, Pittsburgh 22, Pa
*Paul Blum Co, 313-319 Larkin St, Buffalo 10, N Y
Chematar Inc, Exchange Pl, N Y 5
*Foote Mineral Co, Chelten Bldg, Phila, Pa
Alan D Oppenheimer, 578 Exchange St, Buffalo 10, N Y
Republic Chem Corp, 94 Beekman St, N Y 38
*Tennessee Products & Chem Corp, First American National Bank Bldg, Nashville, Tenn
Wah-Chang Corp, 233 Broadway, N Y 7

FERROSOFERRIC OXIDE see Iron Oxide

FERRO TITANIUM

An alloy of titanium and iron made by reducing titanium dioxide with powdered aluminum and iron. Used for deoxidation of molten steel.

Barclay Chem Co, 75 Varick St, N Y
*Metal & Thermit Corp, 100 E 42 St, N Y 17
Republic Chem Corp, 94 Beekman St, N Y 38

FERRO TUNGSTEN

Content: iron, carbon, tungsten, in varying percents. Use—in mfr. of strong, hard alloys for use at high temp.

Wah-Chang Corp, 233 Broadway, N Y 7

FERRO VANADIUM

Content: 50-55% vanadium, carbon, silicon, iron. Uses—in mfr. of special steels and alloys to increase yield, tensile, and impact strengths without sacrificing ductility; imparts a fine grain size to steel.

Vitro Mfg Co, 60 Greenway Dr & Corliss Sta, Pittsburgh, Pa
Wah-Chang Corp, 233 Broadway, N Y 7

FERROUS AMMONIUM SULFATE (Mohr's Salt, Iron Ammonium Sulfate)

$(NH_4)_2Fe(SO_4)_2.6H_2O$. M.W. 392.13. Light green, solid crystalline. Sp. gr. 1.865. Sol. water. Uses—metallurgical reagent; in iron plating; in medicine. Grades—tech.; C.P.

*Baker & Adamson Products, 40 Rector St, N Y
*J T Baker Chem Co, Phillipsburg, N J
*Mallinckrodt Chem, 2 & Mallinckrodt Sts, St Louis 7, Mo

FERROUS CARBONATE

$FeCO_3$. M.W. 115.8. A grayish-green, rhombohedric crystalline powd. Decomp. by heat. Insol. water; sol. carbonated water, acids. Oxides on exposure to air. Used in the prep. of carbonated "ferruginous" waters.

*City Chem Corp, 132 W 22 St, N Y 11

FERROUS CHLORIDE (Iron Chloride, Iron Dichloride, Ferrous Protochloride, Iron Protochloride)

a. $FeCl_2$. b. $FeCl_2.4H_2O$. Greenish-white, deliq. cryst. or powd. Sp. gr. a. 2.988. b. 1.93. Sol. alcohol, water, acidulated with HCl. Uses—mfr. ferric chloride; mordant in dyeing and printing textiles; in metallurgy; in medicine. Grades—cryst. (60% $FeCl_2$); tech.; C.P.

American Firstoline Corp, 420 Lexington Ave, N Y
*Baker & Adamson Products, 40 Rector St, N Y
J T Baker Chem Co, Phillipsburg, N J
Barclay Chem Co, 75 Varick St, N Y
*Jordan Co, 51 St & Merrimac Ave, Chicago 38, Ill
*Mallinckrodt Chem, 2 & Mallinckrodt Sts, St Louis 7, Mo
Republic Chem Corp, 94 Beekman St, N Y 38

FERROUS GLUCONATE (Iron Gluconate)

$Fe[CH_2OH(CHOH)_4CO_2]_2.2H_2O$. M.W. 482.05. Brownish-yellow to light brown, odorless powd. Sol. water. Insol. alcohol. Uses—medicinal.

*N Y Quinine & Chem Works, 99 N 11 St, Bklyn 11, N Y
*Chas Pfizer & Co, 630 Flushing Ave, Bklyn 6, N Y
*Winthrop-Stearns, 1450 Broadway, N Y 18

FERROUS LACTATE

$C_6H_{10}FeO_6.3H_2O$. M.W. 288.05. Pale green-white powd. scales or crusts of small needle-shaped crystals. Sol. boil. water, alkali citrates; sl. sol. cold water and alcohol. Uses— Used as tonic in treat. of anemia.

*N Y Quinine & Chem Works, 99 N 11 St, Bklyn 11, N Y

FERROUS POTASSIUM CYANIDE see Potassium Ferrocyanide

FERROUS PROTOCHLORIDE see Ferrous Chloride

FERROUS PROTOSULFIDE see Ferrous Sulfide

FERROUS SULFATE (Copperas, Iron Sulfate, Iron Vitriol, Green Copperas, Sal Chalybis, Green Vitriol)

$FeSO_4.7H_2O$. Greenish, crystalline, efflorescent lumps or powd. Sp. gr. 1.8987. M.P. 64°C. Decomp. on further heating. Sol. water. Uses—mfr. iron acetate and other iron salt, indigo dyestuffs, Prussian blue, Berlin blue, red oxide of iron and other iron pigments, boiler compounds, fertilizers; mordant in dyeing and printing textile; weed exterminator; in lithography; purifying water; disinfectant and deodorant of sewage; photographic reagent; general reducing agent in chemical processes; in ceramics; precipitating gold from solutions; aluminum etching; electrolytic iron; tanning and dyeing leather; in writing inks; laboratory reagent; mordant in dyeing wood and wood preservative; in process engraving; in medicine. Grades—tech.; cryst.; granulated; sugar sulfate; C.P.; U.S.P.

*Wyandotte Chem Corp, Mich Alkali Div, Wyandotte, Mich

FILLERS, MASONRY

Heavy coating compositions, often composed of waterproof oil, asbestos fibre and paint pigments, which are applied with a brush or by other mechanical means to exterior surfaces, principally of brick, concrete, or stucco, to place a waterproof coating on porous or leaky walls. Coatings of this type will bridge small cracks, fill in the pores, and, as they come in colors, may be used for decorative purposes also.

*Smith Chem & Color Co, 55 John St, Bklyn 1, N Y
*Westvaco Chem Div, 405 Lexington Ave, N Y 17

FILLERS, MINERAL

China clay, pyrophyllite talc, calcium carbonate and other maerials used to give wt. and bulk, to suspend emulsions, to load various products, to act as extenders. Uses—mfr. rubber, paper, ceramics, soap, textiles, paints.

American Firstoline Corp, 420 Lexington Ave, N Y

FILLERS, PAPER

Except in high quality papers it is customary to add to the pulp a relatively cheap mineral loading material to provide bulk and also in many instances to help fill the pores. Most commonly used, and often called "loaders" are; china clay, clays, calcium sulfate. See Clays, Paper-Maker's; also Kaolin, China Clay, Calcium Sulfate, etc.

C L Zimmerman Co, N-204 Cincinnati Union Terminal, Cincinnati 3, Ohio

FILLERS, PLASTIC

The use of filling materials, which include cellulose, asbestos, fabric, paper, etc., is for the value given by the special properties of these materials, better molding qualities, greater toughness and strength, and, in the case of mineral fillers, an increased degree of water and heat resistance. Wood flour is one of the most common of fillers employed. Further, mineral filled molding materials also have a lower coefficient of heat expansion and lower shrinkage in the molding operation which in some instances is an advantage. See also pitches of various types.

FILLERS, RUBBER

A wide variety of inert materials, including asbestos, barytes, calcium carbonate, diatomaceous earth, cotton flock, rayon flock, fossil flour, hydrated lime, flake graphite, magnesia, mica, pumice, silica, talc, whiting, wood flour, and rubber substitute or factice, etc., are employed to reduce costs, reduce gravity, and to aid in surface finishing.

FILTER AIDS Celite® MINERAL FILLERS

Celite Filter Aids, the original diatomaceous silica filter powders, provide efficient, low-cost clarification in the filtering of numerous liquids ranging from sugar and syrups to drugs and lubricants. Available in 8 standard grades to provide any desired degree of clarity at the highest rate of flow.

Celite Mineral Fillers have been developed in varying grades for many industrial processes. They provide such product improvements as added bulk, reduction of gloss, increased hardness and toughness, removal of stickiness, control of body, higher melting point, improved dispersion, etc.

*Standard Chem Products, 1301 Jefferson St, Hoboken, N J
*Westvaco Chem Div, 405 Lexington Ave, N Y 17
*C K Williams & Co, 640 N 13 St, Easton, Pa

FILLERS, WOOD

Pastes or liq. specially for sealing wood surface to make it smooth and fill the cellular spaces so that the succeeding finishing coats will not penetrate but will provide a surface finish. Pastes are often used for all open-grained woods, such as oak, ash, chestnut, while liq. are preferred for close-grained woods, such as pine, fir, gumwood, and cypress. Fillers should also aid as a bond between the wood and the finishing coats.

*Craftint Mfg Co, E 52 St at Collamer Ave, Cleveland 10, Ohio
*Grand Rapids Wood Finishing Co, 53-71 Grandmille Ave S W, Grand Rapids 2, Mich
K F Griffiths & Co, 280 Madison Ave, N Y 16

FIREPROOFING COMPOUNDS, FABRIC

Specially formulated compounds that emit flame-quenching vapors, that deliquesce, or readily fuse and protect the fiber from combustion by excluding air. Usually contained in the formulae are: boric acid or borates, and ammonium phosphates or sulfates. Where laundry-fast flame-proofing agents are required the insol. stannates and tungstates are usually employed.

FIREPROOFING COMPOUNDS, WOOD

Chemicals or specially prepared combinations of chemicals which when applied to wood will not actively support combustion, thus preventing the wood from bursting into flame, but charring instead. In most cases the chemicals used to impregnate the wood when heated emit a smothering gas or composition of gases which will keep oxygen from air from supporting combustion.

FISH GLUE see Isinglass

FISH GUANO see Fish Scrap and Meal

FISH SCRAP AND MEAL (Fish Guano)

Source of nitrogenous fertilizer material. Definitions of the Association of Official Agricultural Chemists include the following:—Acidulated Fish Tankage. Acidulated Fish Scrap is the rendered product derived from fish and treated with sulfuric acid. Fish Tankage. Fish Scrap. Dry Ground Fish. Fish Meal Fertilizer Grade is the dried ground product derived from rendered or unrendered fish.

MONSANTO
SANTOCEL
FOR INDUSTRIAL APPLICATIONS
GENERAL: Silica Aerogel of low density and high oil absorption. Four grades according to particle size and dry bulk density. PROPERTIES: Color, white-transparent in vehicles; index of refraction, 2.2; particle size, 3-5 microns depending on grade; dry bulk density, 2-3 lbs. per cu. ft. to 7.5 lbs. per cu. ft., depending on grade. USES: Flatting agent (matte finishes), anti-caking aid, dry grinding aid, bulk extender, thickening agent, rubber reinforcer, insecticide for stored grain.

FLOTATION AGENTS
For greater productivity and more effective separation, investigate Armour's specification chemical reagents.
Armour's cationic reagents include ARMEENS (high molecular weight aliphatic amines), ARMACS (their water-soluble acetate salts), and ARQUADS (quaternary ammonium salts). Armour's anionic reagents are NEO-FATS (special fractionally distilled fatty acids). All are available in commercial quantities. For technical advice and samples, write:
ARMOUR Chemical Division

FLOTATION AGENTS

Chemicals and specially compounded products used in ore treating to float the minerals in a froth permitting separation from the ore pulp. Oil and oily substances were the first flotation agents. With the introduction of selective flotation xylidine, alphanaphthalamine, thiocarbanilide, orthotoluidine, certain of the thiouras, potassium xanthate, sodium xanthate, certain of the amyl compounds, cresylic acid, pine oil, etc., were utilized.

FLUXES, WELDING

Welding fluxes in the form of powd. are used in welding certain metals. In general, the purposes of fluxes are as follows:—1. To float all impurities to the surface of the molten metal; 2. To cleanse the weld by chemical action; 3. To protect the molten metal against oxidation by contact with the air, and to dissolve any

FLUXES, WELDING, continued

oxide that may have existed in the metal at the weld; 4. To aid fusion, between the molten metal from the filler rod and the metal being welded. In the welding of steel castings, plates and wrought iron, no flux is required ordinarily, but the use of the proper flux when welding with cast iron, bronze, brass, copper and aluminum is essential only from the standpoint of weld quality, but is economical in speeding up the rate of welding.

Heyden
FORMALDEHYDE
N.F. SOLUTION and 37% METHANOL-FREE SOLUTION

Finest quality and uniformity assured through strict laboratory control. Available in tank cars, trucks, drums, carboys and bottles. Methanol-Free in tanks only.

PARAFORMALDEHYDE
(Powder, Flo Granules, Granules)

Minimum assay 95%. Meets U.S.P. and photographic grade requirements.

HEXAMETHYLENETETRAMINE
U.S.P. and TECHNICAL (Granular and Powder)

Serving the pharmaceutical, plastics and chemical industries.

Granular and fine grade
FULLERS EARTH

Consult the largest producer and marketer of true adsorbent-type Fullers Earth about decolorization and refining of Mineral, Animal and Vegetable Oils; Catalysts and Carriers for organic and particularly hydrocarbon reactions; Animal Bedding; Dry Cleaner Powders; Fillers, etc. Technical and process assistance, samples and information are supplied without obligation.

ATTAPULGUS CLAY COMPANY
210 West Washington Square, Philadelphia 5, Pa.
Cable Address: "ATTACLAYCO"

FLOREX

Highest quality Fullers Earth, produced by America's oldest manufacturer. Granular and fine particle sizes to specification. Adsorptive capacity greatly increased by Floridin high-pressure extrusion process. Effective for all adsorbent purposes, including decolorization, clarification, neutralization, desiccation, extraction, catalysis, diluent and other uses. Adsorption problems welcomed by competent technical staff. Samples available.
